Zoom-Zoom

All children instinctively know it.

A few adults still remember it.

One unique car company refuses to outgrow it.

In grown-up language, it means the exhilaration and liberation that come from experiencing sheer motion.

But as usual, children put it much better and simply call it "Go Zoom-Zoom."

We practice it every day.

It's why we build the kind of cars we do.

Zoom-Zoom.

Can we re-awaken it in you today?
A Word to Mazda Owners

Thank you for choosing a Mazda. We at Mazda design and build vehicles with complete customer satisfaction in mind.

To help ensure enjoyable and trouble-free operation of your Mazda, read this manual carefully and follow its recommendations.

An Authorized Mazda Dealer knows your vehicle best. So when maintenance or service is necessary, that's the place to go.

Our nationwide network of Mazda professionals is dedicated to providing you with the best possible service.

We assure you that all of us at Mazda have an ongoing interest in your motoring pleasure and in your full satisfaction with your Mazda product.

Mazda Motor Corporation
HIROSHIMA, JAPAN

Important Notes About This Manual
Keep this manual in the glove box as a handy reference for the safe and enjoyable use of your Mazda. Should you resell the vehicle, leave this manual with it for the next owner.

All specifications and descriptions are accurate at the time of printing. Because improvement is a constant goal at Mazda, we reserve the right to make changes in specifications at any time without notice and without obligation.

Event Data Recorder
This vehicle is equipped with an event data recorder. In the event of a crash, this device records data related to vehicle dynamics and safety systems for a short period of time. These data can help provide a better understanding of the circumstances in which crashes and injuries occur and lead to the designing of safer vehicles.

Air Conditioning and the Environment
Your Mazda's genuine air conditioner is filled with HFC134a (R134a), a refrigerant that has been found not to damage the earth's ozone layer. If the air conditioner does not operate properly, consult an Authorized Mazda Dealer.

Please be aware that this manual applies to all models, equipment and options. As a result, you may find some explanations for equipment not installed on your vehicle.

Printed in Japan July 2005(Print1)
How to Use This Manual

We want to help you get the most driving pleasure from your vehicle. Your owner's manual, when read from cover to cover, can do that in many ways.

Illustrations complement the words of the manual to best explain how to enjoy your Mazda. By reading your manual, you can find out about the features, important safety information, and driving under various road conditions.

The symbol below in this manual means “Do not do this” or “Do not let this happen”.

Index: A good place to start is the Index, an alphabetical listing of all information in your manual.

You'll find several WARNINGs, CAUTIONs, and NOTEs in the manual.

**NOTE**

A NOTE provides information and sometimes suggests how to make better use of your vehicle.

The symbol below, located on some parts of the vehicle, indicates that this manual contains information related to the part. Please refer to the manual for a detailed explanation.

**WARNING**

_A WARNING indicates a situation in which serious injury or death could result if the warning is ignored._

**CAUTION**

_A CAUTION indicates a situation in which bodily injury or damage to your vehicle, or both, could result if the caution is ignored._

Road positions (while driving)

Non-road positions (Parking/Camping)
Front Seats (Manually Operated Seats)

⚠️ WARNING

**Modification of the Front Seats:**
Modifying or replacing the front seats such as replacing the upholstery or loosening any bolts is dangerous. The front seats contain air bag components essential to the supplemental restraint system. Such modifications could damage the supplemental restraint system and result in serious injury. Consult an Authorized Mazda Dealer if there is any need to remove or reinstall the front seats.

**Damaged Front Seats:**
Driving with damaged front seats is dangerous. A collision, even one not strong enough to inflate the air bags, could damage the front seats which contain essential air bag components. If there was a subsequent collision, the air bag may not deploy which could lead to injuries. Always have an Authorized Mazda Dealer inspect the front seats, front seat belt pretensioners and air bags after a collision.

⚠️ WARNING

**Securing the Seats:**
Adjustable seats and seatbacks that are not securely locked are dangerous. In a sudden stop or collision, the seat or seatback could move, causing injury. Make sure the adjustable components of the seat are locked in place by attempting to slide the seat forward and backward and rocking the seatback.

座滑动

⚠️ WARNING

**Driver's Seat Adjustment:**
Adjusting the driver's seat while the vehicle is moving is dangerous. The driver could lose control of the vehicle and have an accident. Adjust the driver's seat only when the vehicle is stopped.

To move a seat forward or backward, raise the lever and slide the seat to the desired position and release the lever.
Essential Safety Equipment

Seats

Make sure the lever returns to its original position and the seat is locked in place by attempting to push it forward and backward.

▼ Seat Recline

⚠️ WARNING

**Reclining:**
Sitting in a reclined position while the vehicle is moving is dangerous because you don't get the full protection from seat belts. During sudden braking or a collision, you can slide under the lap belt and suffer serious internal injuries. For maximum protection, sit well back and upright.

**Reclining the Front Passenger Seat Can Turn Off the Front Passenger Air Bags:**
If your vehicle is equipped with front passenger seat weight sensors, sitting in the front passenger seat improperly out of position or with the seatback reclined too far while the vehicle is moving is dangerous as it can take off weight from the seat bottom and affect the decision of the front passenger sensing system. The front passenger will not have the supplementary protection of the air bags and pretensioner, which could result in serious injury. Always sit upright against your seatback, with your feet on the floor.

To change the seatback angle, lean forward slightly while raising the lever. Then lean back to the desired position and release the lever.

Make sure the lever returns to its original position and the seatback is locked in place by attempting to push it forward and backward.
CAUTION

When returning a rear-reclined seatback to its upright position, make sure you hold onto the seatback with your other hand while operating the lever. If the seatback is not supported, it will flip forward suddenly and could cause injury.

Height Adjustment (Driver's Seat)
The seat-bottom angle can be adjusted by rotating the dial.

Lumber Support Adjustment (Driver's Seat)*
The amount of lumber support can be adjusted by rotating dial.

WARNING

Head Restraints Adjustment: Driving with the head restraints adjusted too low or removed is dangerous. With no support behind your head, your neck could be seriously injured in a collision. Always drive with the head restraints inserted when seats are being used and make sure they are properly adjusted.

*Some models.
Essential Safety Equipment

Seats

**Height adjustment**
To raise a head restraint, pull it up to the desired position.
To lower the head restraint, press the stop-catch release, then push the head restraint down.

Adjust the head restraint so that the top is even with the top of the passenger's ears, never the passenger's neck.

**Removal**
To remove the head restraint, press the stop-catch release, then pull up on the head restraint.

**Front Passenger Seat Side Table**

---

**WARNING**

*Using Seat Side Table While Vehicle is Moving:*
Using the seat side table while the vehicle is moving is dangerous. Hot liquids could cause scalding if spilled, or objects could fall causing injury.
Do not use the seat side table while the vehicle is moving.

*Adjusting Front Passenger Seat While Seat Side Table is in Use:*
Adjusting the front passenger seat forward or rearward while the seat side table is in use is dangerous. Hot liquids could cause scalding if spilled, or objects could fall causing injury.
Do not adjust the front passenger seat while the seat side table is in use.

The pull-up table on the side of the front passenger seat is collapsible. The table can be used when the vehicle is safely parked.
Pull up the table to use it. After pulling the table up, push the table downward and verify that it is locked.

*Some models.*
**NOTE**

The table can be expanded rearward by pulling out the rear end.

When collapsing the table, pull the lever under the table. After the table is collapsed, press the table surface to lock it in place.

**WARNING**

*Positioning the Shoulder Belt Over the Armrest:*

Positioning the shoulder portion of a front seat belt over the armrest is dangerous as it cannot provide adequate protection in a collision and could result in serious injuries. Never position the shoulder portion of a front seat belt over the armrest.

**Armrest**

The armrest can be used or placed upright.
Essential Safety Equipment

Seats

Front Seats (Electrically Operated Seats)

⚠️ WARNING

Modification of the Front Seats:
Modifying or replacing the front seats such as replacing the upholstery or loosening any bolts is dangerous. The front seats contain air bag components essential to the supplemental restraint system. Such modifications could damage the supplemental restraint system and result in serious injury. Consult an Authorized Mazda Dealer if there is any need to remove or reinstall the front seats.

Damaged Front Seats:
Driving with damaged front seats is dangerous. A collision, even one not strong enough to inflate the air bags, could damage the front seats which contain essential air bag components. If there was a subsequent collision, the air bag may not deploy which could lead to injuries. Always have an Authorized Mazda Dealer inspect the front seats, front seat belt pretensioners and air bags after a collision.

⚠️ CAUTION

- The seat-bottom power adjustment is operated by motors. Avoid extended operation because excessive use can damage the motors.
- To prevent the battery from running down, avoid using the power adjustment when the engine is stopped. The adjuster uses a large amount of electrical power.
- Don't use the switch to make more than one adjustment at a time.

▼ Seat Slide

To slide the seat, move the slide lifter switch on the outside of the seat to the front or back and hold it. Release the switch at the desired position.
WARNING

Reclining:
Sitting in a reclined position while the vehicle is moving is dangerous because you don't get the full protection from seat belts. During sudden braking or a collision, you can slide under the lap belt and suffer serious internal injuries. For maximum protection, sit well back and upright.

Reclining the Front Passenger Seat Can Turn Off the Front Passenger Air Bags:
If your vehicle is equipped with front passenger seat weight sensors, sitting in the front passenger seat improperly out of position or with the seatback reclined too far while the vehicle is moving is dangerous as it can take off weight from the seat bottom and affect the decision of the front passenger sensing system. The front passenger will not have the supplementary protection of the air bags and pretensioner, which could result in serious injury. Always sit upright against your seatback, with your feet on the floor.

▼ Seat Recline

Change the seatback angle by pressing the front or rear side of the reclining switch. Release the switch at the desired position.

▼ Height Adjustment

Front height adjustment
To adjust the front height of the seat-bottom, raise or lower the front of the slide lifter switch on the left side of the seat.
Essential Safety Equipment

Seats

Rear height adjustment
Raise or lower the back of the switch to adjust the rear height of the seat-bottom.

Height adjustment
Raise the seat-bottom by pulling up on the center of the switch. Release the switch at the desired position.

Lower the seat-bottom by pressing down on the center of the switch. Release the switch at the desired position.

Head Restraint

⚠️ WARNING

Head Restraints Adjustment:
Driving with the head restraints adjusted too low or removed is dangerous. With no support behind your head, your neck could be seriously injured in a collision. Always drive with the head restraints inserted when seats are being used and make sure they are properly adjusted.

Height adjustment
To raise a head restraint, pull it up to the desired position.
To lower the head restraint, press the stop-catch release, then push the head restraint down.

Adjust the head restraint so that the top is even with the top of the passenger's ears, never the passenger's neck.
Removal
To remove the head restraint, press the stop-catch release, then pull up on the head restraint.

\[ \text{Front Passenger Seat Side Table} \]

\[ \text{WARNING} \]

\text{Using Seat Side Table While Vehicle is Moving:}
Using the seat side table while the vehicle is moving is dangerous. Hot liquids could cause scalding if spilled, or objects could fall causing injury. Do not use the seat side table while the vehicle is moving.

\text{Adjusting Front Passenger Seat While Seat Side Table is in Use:}
Adjusting the front passenger seat forward or rearward while the seat side table is in use is dangerous. Hot liquids could cause scalding if spilled, or objects could fall causing injury. Do not adjust the front passenger seat while the seat side table is in use.

\[ \text{NOTE} \]

The pull-up table on the side of the front passenger seat is collapsible. The table can be used when the vehicle is safely parked. Pull up the table to use it. After pulling the table up, push the table downward and verify that it is locked.

The table can be expanded rearward by pulling out the rear end.

When collapsing the table, pull the lever under the table. After the table is collapsed, press the table surface to lock it in place.

*Some models.*
Essential Safety Equipment

Seats

▼ Armrest
The armrest can be used or placed upright.

![Armrest Image]

⚠️ WARNING

Positioning the Shoulder Belt Over the Armrest:
Positioning the shoulder portion of a front seat belt over the armrest is dangerous as it cannot provide adequate protection in a collision and could result in serious injuries. Never position the shoulder portion of a front seat belt over the armrest.

⚠️ WARNING

Stacking Cargo:
Stacking luggage or other cargo higher than the seatback is dangerous. During a sudden stop or collision, objects can fly around and become projectiles that could hit and injure passengers. Don't stack cargo higher than the seatback.

Not Securing Luggage and Cargo:
Not securing cargo while driving is dangerous as it could move or be crushed during sudden braking or a collision and cause injury. Make sure luggage and cargo is secured before driving.

Securing Seats:
Adjustable seats that are not securely latched are dangerous. In a sudden stop or collision, the seat or seatback could move, causing injury. Make sure the adjustable components of the seat are locked in place by attempting to slide the seat forward and backward and rocking the seatback.

Seat Adjustment:
Adjusting the seat while the vehicle is moving is dangerous. Sudden braking or a collision could cause serious injury. Adjust the seat only when the vehicle is stopped.
WARNING

Unlocked Seatback:
The seatback plays an important role in your protection in a vehicle. Leaving the seatback unlocked is dangerous as it can allow passengers to be ejected or thrown around and baggage to strike occupants in a sudden stop or collision, resulting in severe injury. After adjusting the seatback at any time, even when there are no other passengers, rock the seatback to make sure it is locked in place.

Passenger on the Folded Seatback:
Driving with a passenger on the folded seatback is dangerous. Allowing a child to sit on the folded seatback while the vehicle is moving is particularly dangerous. During sudden braking or even a minor collision, a child not restrained in a proper seat or child-restraint system and seat belt could be thrown forward, back or even out of the car resulting in serious injuries or death. The child in the cargo area could be thrown into other occupants and cause serious injury. Never allow a passenger to sit or stand on the folded seatback while the vehicle is moving.

NOTE

When returning a second-row seat to its original position, also replace the seat belt to its normal position. Verify that the seat belt pulls out and retracts.

Seat Slide

To move the seat forward or backward, raise the lever and slide the seat to the desired position and release the lever.

Make sure the lever returns to its original position and the seat is locked in place by attempting to push it forward and backward.

Side-Sliding Seat (right side)

The second-row seats can be put together and used as a bench seat. Raise the side seat-slide lever and slide the seat sideways.

Make sure the lever returns to its original position and the seat is locked in place by attempting to push it from side to side.
Essential Safety Equipment

Seats

▼ Seat Recline

⚠️ WARNING

Reclining:
Sitting in a reclined position while the vehicle is moving is dangerous because you don't get the full protection from seat belts. During sudden braking or a collision, you can slide under the lap belt and suffer serious internal injuries. For maximum protection, sit well back and upright.

Reclining the Second-Row Seatback:
Reclining the second-row seatback when the third-row seat is occupied is dangerous. Because the clearance in the third-row seat is limited, the occupants in the third-row seat can hurt themselves seriously on the reclined second-row seatback. Don't recline the second-row seatback when the third-row seat is occupied.

To change the seatback angle, lean forward slightly while raising the lever. Then lean back to the desired position and release the lever.

Make sure the lever returns to its original position and the seatback is locked in place by attempting to push it forward and backward.

⚠️ CAUTION

When returning a rear-reclined seatback to its upright position, make sure you hold onto the seatback with your other hand while operating the lever. If the seatback is not supported, it will flip forward suddenly and could cause injury.

▼ Head Restraint

⚠️ WARNING

Head Restraints Adjustment:
Driving with the head restraints adjusted too low or removed is dangerous. With no support behind your head, your neck could be seriously injured in a collision. Always drive with the head restraints inserted when seats are being used and make sure they are properly adjusted.
**Height adjustment**

To raise a head restraint, pull it up to the desired position.

To lower the head restraint, press the stop-catch release, then push the head restraint down.

Adjust the head restraint so that the top is even with the top of the passenger's ears, never the passenger's neck.

**Removal**

To remove the head restraint, press the stop-catch release, then pull up on the head restraint.

**Armrest**

The armrest can be used or placed upright.

- **Type A**

- **Type B**

---

**WARNING**

*Positioning the Shoulder Belt Over the Armrest:*

Positioning the shoulder portion of a second-row seat belt over the armrest is dangerous as it cannot provide adequate protection in a collision and could result in serious injuries. Never position the shoulder portion of a second-row seat belt over the armrest.
Essential Safety Equipment

Seats

▼ Third-Row Seat Access

Access to the third-row seat via the sliding door

When the second-row seats are together, move along the path between the sliding door and the side sliding seat.

When the second-row seats are separated, pass between them and move to the rear of the vehicle.

▼ Folding the Second-Row Seats

WARNING

Using Folded Seatback as a Table

While the Vehicle is Moving:

Using the folded seatback as a table while driving is dangerous. During sudden braking or a collision, objects placed on the folded seatback could become projectiles that could hit and injure someone. Never use the folded seat as a table while the vehicle is moving.

The second-row seatbacks can be folded down and used as tables when the vehicle is not moving.

To fold the seatback

1. If your vehicle is equipped with an armrest, return the armrest to the upright position.
2. Put the buckle in the pocket of the seat bottom.
CAUTION
Lowering the seatback without stowing the seat belt buckle could damage the seatback.

3. Raise the reclining lever and lower the seatback forward. Make sure the seatback is locked.

To return the seatback to the upright position
Raise the reclining lever and lift the seatback upright. Attempt to move the seatback forward and backward to make sure it is locked.

Removal of Second-Row Seats
The second-row seats can be removed to create a more comfortable space between the third-row and front seats. Additional cargo space is available with the removal of the second-row seats and stowing of the third-row seat.

WARNING
Seat Removal or Installation While Vehicle is Moving or on a Slope:
Removing or installing the second-row seats while the vehicle is moving or on a slope is dangerous. The seats are heavier than they appear and could suddenly detach causing serious injury. Remove or install the seats with the vehicle parked on a level surface.

Riding on the Floor Space:
Riding on the floor space created by the removal of the second-row seat is dangerous. Sudden braking or a collision could cause serious injury. Do not sit or lie in the floor space for the second-row seat while the vehicle is moving. Never ride in a vehicle where you can’t sit in the seat and wear the seat belt.

Pinching Fingers or Hands:
Placing your hands around the seat anchors when removing or installing the second-row seats is dangerous. You could pinch your hands or fingers between the seat anchor and the seat. Hold the edge of the seat when lowering it into place. Never place your hands between the seat anchor and the seat.
**WARNING**

Lifting the Seat-Anchor Bar:
Lifting the seat-anchor bar without firmly supporting the seat with your hand is dangerous. Lifting the seat unlocks the front clamps automatically and could cause the seat to fall. Support the seat firmly while lifting the seat-anchor bar.

**To remove the seat**

1. Put the buckle in the pocket of the seat bottom.

2. Remove the head restraint.

3. Slide the seat all the way back.

4. Raise the reclining lever and lower the seatback forward. Make sure the seatback is locked.

5. Work only on one seat at a time to avoid one seat falling while working on another.

6. Lift and hold the seat-anchor bar and raise the entire seat up and forward.

**CAUTION**

Lowering the seatback without stowing the seat belt buckle could damage the seatback.
7. The seat is heavier than it looks, carefully pull up and detach the seat. Get assistance to lift it out of the vehicle.

3. Supporting the seat with your hands, slowly lower the seat rearwards to lock it in place.

To install the seat

1. First identify which seat fits which position by verifying that the seat belt buckles are located nearest the center of the vehicle.

2. Align the clamps on the front underside of the seat with the forward loop anchors on the floor and support the seat so that it doesn't fall (the rear portion of the seat cannot be mounted first). The clamps on the front of the seat automatically lock into the floor loop anchors after lowering the seat.

4. Raise the reclining lever and lift the seatback upright. Attempt to move the seatback forward and backward to make sure it is locked.

5. Insert the head restraint.

6. Buckle the seat belts once just to confirm the seat belt buckles are inboard which means each seat is on the correct side of the vehicle.

\[\textbf{WARNING}\]

Unsecured Seat:
Driving with the seat unsecured is dangerous. The seat may become detached while the vehicle is moving causing serious injury. After installing the seat, push it forward and backward to make sure it is securely locked.
Essential Safety Equipment

Seats

⚠️ CAUTION
Do not move the side seat-slide lever with the seat removed. The lever could be damaged resulting in loss of functionality.

Third-Row Seat

⚠️ WARNING

Stacking Cargo:
Stacking luggage or other cargo higher than the seatback is dangerous. During a sudden stop or collision, objects can fly around and become projectiles that could hit and injure passengers. Don’t stack cargo higher than the seatback.

Not Securing Luggage and Cargo:
Not securing cargo while driving is dangerous as it could move or be crushed during sudden braking or a collision and cause injury. Make sure luggage and cargo is secured before driving.

Securing Seats:
Adjustable seats that are not securely latched are dangerous. In a sudden stop or collision, the seat or seatback could move, causing injury. Make sure the adjustable components of the seat are locked in place by attempting to rock the seatback.

Seat Adjustment:
Adjusting the seat while the vehicle is moving is dangerous. Sudden braking or a collision could cause serious injury. Adjust the seat only when the vehicle is stopped.
WARNING

Unlocked Seatback:
The seatback plays an important role in your protection in a vehicle. Leaving the seatback unlocked is dangerous as it can allow passengers to be ejected or thrown around and baggage to strike occupants in a sudden stop or collision, resulting in severe injury. After adjusting the seatback at any time, even when there are no other passengers, rock the seatback to make sure it is locked in place.

Passenger on the Folded Seatback:
Driving with a passenger on the folded seatback is dangerous. Allowing a child to sit up on the folded seatback while the vehicle is moving is particularly dangerous. In a sudden stop or even a minor collision, a child not in a proper seat or child-restraint system and seat belt could be thrown forward, back or even out of the vehicle resulting in serious injuries or death. The child in the baggage area could be thrown into other occupants and cause serious injury. Never allow a passenger to sit or stand on the folded seatback while the vehicle is moving.

NOTE

- The third-row seat cannot be removed.
- When returning a second-row seat to its original position, also replace the seat belt to its normal position. Verify that the seat belt pulls out and retracts.

Seat Recline

WARNING

Reclining:
Sitting in a reclined position while the vehicle is moving is dangerous because you don't get the full protection from seat belts. During sudden braking or a collision, you can slide under the lap belt and suffer serious internal injuries. For maximum protection, sit well back and upright.

To change seatback angle, lean forward slightly while pulling the flat-folding strap. Then lean back to the desired position and release the strap. Make sure the seat is securely latched.
Essential Safety Equipment

Seats

▼ Head Restraint

**WARNING**

*Head Restraints Adjustment:*
*Driving with the head restraints adjusted too low or removed is dangerous. With no support behind your head, your neck could be seriously injured in a collision. Always drive with the head restraints inserted when seats are being used and make sure they are properly adjusted.*

**Height adjustment**

To raise a head restraint, pull it up to the desired position.
To lower the head restraint, press the stop-catch release, then push the head restraint down.

Adjust the head restraint so that the top is even with the top of the passenger's ears, never the passenger's neck.

**Removal**

To remove the head restraint, press the stop-catch release, then pull up on the head restraint.

▼ Folding the Third-Row Seat

**WARNING**

*Riding on Folded Flat Third-Row Seat:*
*Riding on the third-row seat when it's folded is dangerous. During sudden braking or a collision, passenger's could be thrown around inside the vehicle and seriously injured. Always ride with the third-row seat in the forward-facing, upright position and seat belt securely fastened.*
1. Remove the head restraints from the third-row seat (page 2-22).

2. Pull the third-row seat's flat-folding strap and push the seatback down until it locks.

▼ Stowing the Third-Row Seat

More storage space can be created by folding away the third-row seat into the rear seat well. With the second-row seats removed and the third-row seat stowed, even more space is available.

⚠️ WARNING

**Riding in the Seat Well:**
Riding in the seat well for the third-row seat is dangerous. Sudden braking or a collision could cause serious injury. Do not sit or lie in the seat well while the vehicle is moving. Never ride in a vehicle where you can’t sit in the seat and wear the seat belt.

**Note**
Remove any items from the seat well for the third-row seat before stowing the seat. Anything in the baggage area when the seat is set into the well can damage the seatback material and prevent a flat cargo area.

⚠️ WARNING

**Pinching Fingers or Hands:**
Placing your hands around the seat stowage well when stowing the third-row seat is dangerous. You could pinch your hands or fingers between the seat and the well. Hold the handle when lowering the seat into place. Never place your hands between the seat and the seat well.

**Unlocked Seatback:**
An unlocked seatback is dangerous. While stowing the seat, the seatback could suddenly move causing serious injury. Push the seatback forward and backward to make sure it is locked in place.
Stowing the third-row seat

1. Insert the seat belts in the retainers.

2. Remove the head restraint and set them aside temporarily (page 2-22).

3. Pull strap A and ease the seatback toward the front of the vehicle with your other hand and be sure it locks with a click.

4. Pull strap B and lift the combined seatback and seat bottom up to vertical with your other hand. Gently lower the seat into the seat well.

5. Insert the head restraints between the floor and seat at the positions indicated on the labels.

Raising the third-row seat upright for road use

1. Clear the entire cargo floor.
2. Remove the head restraints.

3. Carefully reverse the procedures used to lower the seat into the seat well. Use the handle and ease the combined seatback and seat bottom up to vertical.

4. Carefully lower the seat forward and make sure it's latched to the floor.

5. Pull strap A and raise the seatback upright. Attempt to move the seatback forward and backward to make sure it is locked.

6. Insert the head restraints.

7. Place the seat belt buckles face up.
WARNING

Rear Facing Third-Row Seat and a Moving Vehicle:
Driving with the third-row seat facing rearward is dangerous because the liftgate cannot be securely closed. During sudden braking or a collision, passengers could be thrown out of the vehicle resulting in serious injury or death. Passengers seated facing rearward may suffer leg and foot injury even down a driveway or with a minor dip in the road. Place the third-row seat in the forward-facing position with the seatback upright before driving the vehicle.

Support Bar:
Sitting in the rear-facing, third-row seat position without installing the support bar is dangerous. Without the support of the bar, the seatback could collapse resulting in injury. Always install the support bar before sitting in the rear-facing, third-row seat position.

Third-Row Seat and the Flat-Folding Strap:
Pulling the flat-folding strap with the third-row seat facing rearward is dangerous. The seatback will collapse into the seat bottom and could result in injury. Do not pull the flat-folding strap with the third-row seat facing rearward.

NOTE

- Remove cargo from the seat well area before placing the third-row seat in the rear-facing position to avoid damaging the back of the seatback when it is folded down.
- Adjust the seatback to the upright position when the third-row seat is facing rearward.

To put the third-row seat in the rear facing position:
1. Open the liftgate.
2. Clean the rear bumper so that dirt does not soil the seat.
3. Clear away all cargo from the seat well.
4. Remove the head restraints.
5. Pull strap B while supporting the seatback with the other hand and carefully ease the seatback rearward onto the rear bumper.
6. Go inside the vehicle and to the rear.
7. Remove the support bar from the pocket.

8. Set the hook on the support bar in the rear of the seatback.

9. Pull the seatback towards the front of the vehicle until the opposite end of the support bar hooks onto the anchor loop in the side trim. Attempt to push the seatback towards the rear (liftgate) to make sure the support bar is securely latched.

To return the third-row seat to the road position (forward facing)

1. Make sure to stow the shoulder belts away from the seat bottom as it is lowered.

2. Detach the support bar by following the reverse procedure for installation.
3. From inside the vehicle, carefully lower the seat towards the front until it locks in place. Attempt to move the seat forward and backward to make sure it's securely locked in place.

4. Reinsert the head restraints.

5. Place the seat belt buckles face up.

6. Fasten the shoulder belts and check that they are routed properly for passenger use.

Flat Folding

All seats can be folded down for use as beds when the vehicle is safely parked.

**WARNING**

**Folded-Flat Seats:**

*Sit on or lying on seats folded flat is a dangerous way to ride. During sudden braking or a collision you could be thrown around inside the vehicle and seriously injured. Don't ride on seatbacks folded flat.*

**CAUTION**

Do not move around in the vehicle while the seats are folded down. A foot could be injured if it becomes pinched between the seat bottom and seatback. If you have to move around the folded down seats, step on the center of the seats and move carefully.
To Fold the Seats Flat

1. Slide the second-row seat all the way back (page 2-13).

2. Fold down the second-row seatbacks rearward until they lock (page 2-14).

3. Remove the head restraints from the front seats. Refer to Head Restraint (Manually Operated Seats) (page 2-5). Refer to Head Restraint (Electrically Operated Seats) (page 2-10).

4. Slide the front seats all the way forward. Refer to Seat Slide (Manually Operated Seats) (page 2-3). Refer to Seat Slide (Electrically Operated Seats) (page 2-8).

5. Fold down the front seatbacks rearward until they lock. Refer to Seat Recline (Manually Operated Seats) (page 2-4). Refer to Seat Recline (Electrically Operated Seats) (page 2-9).

To return the seats to their road positions, reverse the procedures for folding the second-row and front seats back.
Seat Belt Systems

Seat Belt Precautions

Seat belts help to decrease the possibility of severe injury during accidents and sudden stops. Mazda recommends that the driver and all passengers always wear seat belts.

All of the outboard seat belt retractors are designed to keep the lap/shoulder belts out of the way when not in use.

The driver's seat belt has no provisions for child-restraint systems and has only an emergency locking mode. The driver may wear it comfortably, and it will lock during a collision.

However, the front passenger's seat and all rear outboard lap/shoulder belt retractors operate in two modes: emergency locking mode, and for child-restraint systems, automatic locking mode. While we recommend you put all children in the rear seats, if you must use the front passenger seat for a child, slide the front passenger seat as far back as possible and make sure any child-restraint system is secured properly.

The third-row center seat positions have a lap belt with manual adjustment.

⚠️ WARNING

Not Wearing Seat Belts:
Not wearing a seat belt is extremely dangerous. During a collision, occupants not wearing seat belts could hit someone or things inside the vehicle or even be thrown out of the vehicle. They could be seriously injured or even killed. In the same collision, occupants wearing seat belts would be much safer. Always wear your seat belt and make sure all occupants are properly restrained.

Seat Belt Damaged During an Accident:
Using a damaged seat belt is dangerous. An accident could damage the belt webbing of the seat belt in use. A damaged seat belt cannot provide adequate protection in a collision. Front air bags and pretensioners work together, but whether a front seat was occupied or not, if any air bag deployed and whether a seat belt pretensioner deployed or not, all front seat belts and air bags must be inspected and replaced if necessary. Have an Authorized Mazda Dealer inspect all seat belt systems in use during an accident before they are used again.

Twisted Seat Belts:
Twisted seat belts are dangerous. In a collision, the full width of the belt isn't available to absorb the impact. This puts more force on the bones beneath the belt, which could cause serious injury or death. Don't wear twisted seat belts.
**WARNING**

*One Belt, One Passenger:*
Using one seat belt for more than one person at a time is dangerous. A seat belt used in this way can't spread the impact forces properly and the two passengers could be crushed together and seriously injured or even killed. Never use one belt for more than one person at a time and always operate the vehicle with each occupant properly restrained.

**CAUTION**

Belt retraction may become difficult if the belts and rings are soiled, so try to keep them clean.

▼Pregnant Women and Persons with Serious Medical Conditions

Pregnant women should wear seat belts. Ask your doctor for specific recommendations. The lap belt should be worn SNUGLY AND AS LOW AS POSSIBLE OVER THE HIPS. The shoulder belt should be worn across your shoulder properly, but never across the stomach area. Persons with serious medical conditions also should wear seat belts. Check with your doctor for any special instructions regarding specific medical conditions.
In the emergency locking mode, the belt remains comfortable on the occupant and the retractor will lock in position during a collision. When the seat belt is retracted, it will always be in the emergency locking mode until it is switched to automatic locking mode by pulling it all the way out to its full length. If the belt feels tight and hinders comfortable movement while the vehicle is stopped or in motion, it may be in the automatic locking mode because the belt has been pulled too far out. To return to the belt more comfortable emergency locking mode, wait until the vehicle has stopped in a safe, level area, retract the belt fully to convert it back to emergency locking mode and then extend it around you again.

Always use the automatic locking mode to keep the child-restraint system from shifting to an unsafe position in the event of an accident. To enable seat belt automatic locking mode, pull it all the way out and connect it as instructed on the child-restraint system. It will retract down to the child-restraint system and stay locked on it. See the section on child restraint (page 2-41).
Fastening the Seat Belts

1. Grasp the tongue.
2. Slowly pull out the lap/shoulder belt.
3. Insert the tongue into the buckle until you hear a click.
4. Make sure the shoulder belt is snugly fitted against your body.

**WARNING**

**Positioning the Shoulder Portion of the Seat Belt:**
Improper positioning of the shoulder portion of the seat belt is dangerous. Always make sure the shoulder portion of the seat belt is positioned across your shoulder and near your neck, but never under your arm, on your neck, or on your upper arm.

**WARNING**

**Positioning the Lap Portion of the Seat Belt:**
The lap portion of the seat belt worn too high is dangerous. In a collision, this would concentrate the impact force directly on the abdominal area, causing serious injury. Wear the lap portion of the belt snugly and as low as possible.
Essential Safety Equipment

Seat Belt Systems

▼ Unfastening the Seat Belts
Depress the button on the buckle.

NOTE
If a belt does not fully retract, inspect it for kinks and twists. If it is still not retracting properly, have it inspected at an Authorized Mazda Dealer.

To secure the outboard-rear seat belts when not in use, insert the belts in their seat belt retainers.

▼ Shoulder Belt Adjuster *
Adjust the height of the shoulder belt if the seat belt touches your neck, or if it crosses your arm instead of your shoulder. To raise the shoulder belt adjuster, push the adjuster up. To lower the shoulder belt adjuster, push and slide it down. Make sure the adjuster is locked.

WARNING
Positioning the Shoulder Portion of the Seat Belt:
Improper positioning of the shoulder portion of the seat belt is dangerous. Always make sure the shoulder portion of the seat belt is positioned across your shoulder and near your neck, but never under your arm, on your neck, or on your upper arm.

* Some models.
Front Seat Belt Pretensioner and Load Limiting Systems

For optimum protection, the driver and front passenger seat belts are equipped with pretensioner and load limiting systems. In moderate or greater frontal or near-frontal accidents, the front air bag and pretensioner systems deploy simultaneously. The pretensioners take up slack in the front seat belts as the air bags are expanding. The seat belt pretensioner system cannot provide adequate protection in an accident if the seat belt is not fastened properly. The load limiting system releases belt webbing in a controlled manner to reduce belt force on the occupant's chest.

**WARNING**

Incorrect Positioning of the Driver and Front Passenger Seat Belts:
Incorrect positioning of the driver and passenger seat belts is dangerous. Without proper positioning, the pretensioner and load limiting systems cannot provide adequate protection in an accident and this could result in serious injury. Wear seat belts only as recommended in this owner's manual (page 2-33).

**WARNING**

Expended Seat Belt Pretensioners:
One or both front air bags may deploy, and the corresponding pretensioner(s) will also deploy at the same time. Use of front seat belts with the pretensioner system expended is dangerous. Like the air bags, the seat belt pretensioners will only function once. After they are expended, they will not function again and must be replaced immediately. If the seat belt pretensioners are not replaced, the risk of injury in a collision will increase. Always have an Authorized Mazda Dealer inspect the seat belt pretensioners and air bags after any collision. Expended seat belt pretensioners and air bags must be replaced after any collision which caused them to deploy. Additionally, the load limiter will only limit loads on the chest once in a collision and is another reason to have the front seat belts inspected.

Modification or Testing of the Pretensioner System:
Modifying the components or wiring of the pretensioner system, including the use of electronic testing devices is dangerous. You could accidentally activate it or make it inoperable which would prevent it from activating in an accident. The occupants or repairers could be seriously injured. Never modify the components or wiring, or use electronic testing devices on the pretensioner system.
Essential Safety Equipment

Seat Belt Systems

⚠️ WARNING

Pretensioner System Disposal:
Improper disposal of the pretensioner system or a vehicle with non-deactivated pretensioners is dangerous. Unless all safety procedures are followed, injury could result. Ask an Authorized Mazda Dealer how to safely dispose of the pretensioner system or how to scrap a pretensioner-equipped vehicle.

NOTE

- The pretensioner system will only activate in a moderate or greater frontal or near-frontal collision. It will not activate in most rollovers, side or rear impacts.
- Some smoke (non-toxic gas) will be released when the air bags and pretensioners deploy. This does not indicate a fire. This gas normally has no effect on occupants, however, those with sensitive skin may experience light skin irritation. If residue from the deployment of the air bags or the front pretensioner system gets on the skin or in the eyes, wash it off as soon as possible.

▼ Air Bag/Front Seat Belt Pretensioner System Warning Light

If the air bag/front seat belt pretensioner system is normal, the warning light illuminates when the ignition switch is turned to the ON position or after the engine is cranked. After about 6 seconds it goes out.

A system malfunction is indicated when the warning light constantly flashes, constantly illuminates or doesn’t illuminate at all when the ignition switch is turned to the ON position. If any of these occur, consult an Authorized Mazda Dealer as soon as possible. The system may not work in an accident.

⚠️ WARNING

Self-Servicing the Air Bag/Pretensioner Systems:
Self-servicing or tampering with the systems is dangerous. An air bag/pretensioner could accidentally activate or become disabled. This could cause serious injuries. Never tamper with the systems and always have an Authorized Mazda Dealer perform all servicing and repairs.
Center, Third-Row Position Seat Belt

▼ Fastening the Seat Belt

1. Pull the tongue to the desired length.
2. Insert it into the buckle until you hear a click.
3. Adjust the belt length.
   To lengthen the belt, hold the tongue at a right angle to the webbing and pull. To shorten, pull the loose end of the webbing.
4. Make sure the lap belt is snugly fitted against your body.

⚠️ WARNING

Wearing the Lap Belt: A lap belt worn too high is dangerous. In a collision, this would concentrate the impact force directly on the abdominal area, causing serious injury. Wear the lap belt snugly and as low as possible.
Essential Safety Equipment

Seat Belt Systems

Unfastening the Seat Belt
Depress the button on the buckle.

Seat Belt Extender

If your seat belt is not long enough, even when fully extended, a seat belt extender may be available to you at no charge from your Authorized Mazda Dealer. This extender will be only for you and for the particular vehicle and seat. Even if it plugs into other seat belts, it may not hold in the critical moment of a crash. When ordering an extender, only order one that provides the necessary additional length to fasten the seat belt properly. Please contact your Authorized Mazda Dealer for more information.

WARNING

Unnecessary Use of an Extender:
Using a seat belt extender when not necessary is dangerous. The seat belt will be too long and not fit properly. In an accident, the seat belt will not provide adequate protection and you could be seriously injured. Only use the extender when it is required to fasten the seat belt properly.

Using an Improper Extender:
Using a seat belt extender that is for another person or a different vehicle or seat is dangerous. The seat belt will not provide adequate protection and the user could be seriously injured in an accident. Only use the extender provided for you and for the particular vehicle and seat. NEVER use the extender in a different vehicle or seat.
WARNING

Using an Extender That is Too Long:
Using an extender that is too long is dangerous. The seat belt will not fit properly. In an accident, the seat belt will not provide adequate protection and you could be seriously injured. Don't use the extender or choose one shorter in length if the distance between the extender's buckle and the center of the user's body is less than 15cm (6 in).

NOTE

When not in use, remove the seat belt extender and store it in the vehicle. If the seat belt extender is left connected, the seat belt extender might get damaged as it will not retract with the rest of the seat belt and can easily fall out of the door when not in use and be damaged the seat belt warning light will not illuminate and function properly.

Seat Belt Warning Light

If the driver's seat belt is not fastened when the ignition switch is turned to the ON position, the seat belt warning light will remain on until the belt is fastened. If the system does not operate correctly, consult an Authorized Mazda Dealer.
Essential Safety Equipment

Seat Belt Systems

**Seat Belt Warning Beep**

If the driver's seat belt is not fastened when the ignition switch is turned to the ON position, a beep sound will be heard for about 6 seconds.
Child Restraint Precautions

Mazda strongly urges the use of child-restraint systems for children small enough to use them.

You are required by law to use a child-restraint system for children in the U.S. and Canada. Check your local and state or provincial laws for specific requirements regarding the safety of children riding in your vehicle.

Whatever child-restraint system you consider, please pick the appropriate one for the age and size of the child, obey the law and follow the instructions that come with the individual child-restraint system.

A child who has outgrown child-restraint systems should sit in the rear and use seat belts, both lap and shoulder. If the shoulder belt crosses the neck or face, move the child closer to the center of the vehicle.

Statistics confirm that the rear seats are the best place for all children up to 12 years of age, and more so with a supplemental restraint system (air bags).

A rear-facing child-restraint system should NEVER be used on the front seat with the air bag system activated. The front passenger's seat is also the least preferred seat for other child-restraint systems.

To reduce the chance of injuries caused by deployment of the front passenger air bag, the front passenger seat weight sensors work as a part of the supplemental restraint system. This system deactivates the front passenger front and side air bags and also the front passenger seat belt pretensioner system when the total seated weight on the front passenger seat is less than approximately 30 kg (66 lb).

When an infant or small child sits on the front passenger seat, the system shuts off the front passenger front and side air bags and seat belt pretensioner system, so make sure the front passenger air bag deactivation indicator light illuminates.

Even if the front passenger air bag is shut off, Mazda strongly recommends that children be properly restrained and child-restraint systems of all kinds are properly secured on the rear seats which are the best place for children.

For more details, refer to “Front passenger seat weight sensors” (page 2-63).
Essential Safety Equipment

Child Restraint

⚠️ WARNING

Proper Size of Child-Restraint System:
For effective protection in vehicle accidents and sudden stops, a child must be properly restrained using a seat belt or child-restraint system depending on age and size. If not, the child could be seriously injured or even killed in an accident.

Follow the Manufacturer's Instructions and Always Keep the Child-Restraint System Buckled Down:
An unsecured child-restraint system is dangerous. In a sudden stop or a collision it could move causing serious injury or death to the child or other occupants. Make sure any child-restraint system is properly secured in place according to the child-restraint system manufacturer's instructions. When not in use, remove it from the vehicle or fasten it with a seat belt, or latch it down to BOTH LATCH lower anchors for LATCH child-restraint systems and the corresponding tether anchor.

Holding a Child While the Vehicle is Moving:
Holding a child in your arms while the vehicle is moving is extremely dangerous. No matter how strong the person may be, he or she cannot hold onto a child in a sudden stop or collision and it could result in serious injury or death to the child or other occupants. Even in a moderate accident, the child may be exposed to air bag forces that could result in serious injury or death to the child, or the child may be slammed into the adult, injuring the adult. Always secure a child in a proper child-restraint system.

Rear-Facing Child-Restraint System:
Rear-facing child-restraint systems on the front seat are particularly dangerous. The child-restraint system can be hit by a deploying air bag and moved violently backward resulting in serious injury or death to the child. Even though you may feel assured that a front passenger air bag will not deploy based on the fact that the front passenger air bag deactivation indicator light illuminates, NEVER use a rear-facing child-restraint system in the front seat with an air bag that could deploy even in a moderate collision.
WARNING

Seating Children in a Child-Restraint System on the Front Passenger Seat:
If your vehicle is equipped with front passenger seat weight sensors, the vehicle is also equipped with an air bag deactivation indicator light (page 2-51). Even with the front passenger seat weight sensors, if you must use the front passenger seat for children, seating a child in a child-restraint system on the front passenger seat under the following conditions increases the danger of the front passenger air bag deploying and could result in serious injury or death to the child.

- The total seated weight of the child with the child-restraint system on the front passenger seat is approximately 30 kg (66 lb) or more with a child in the child-restraint system.
- Luggage or other items are placed on the seat with the child in the child-restraint system.
- A rear passenger or luggage push or pull down on the front passenger seatback.
- A rear passenger puts their feet on the front seat rails.
- Luggage or other items are placed on the seatback or hung on the assist grip, head restraint or armrest.
- The seat is washed.
- Liquids are spilled on the seat.
- The front passenger seat is moved backward, pushing into luggage or other items placed behind it.
- The front passenger seatback contacts the second-row seat.
- Luggage or other items are placed between the front passenger seat and driver seat.
- Any accessories which might increase the total seated weight on the front passenger seat are attached to the front passenger seat.

The designated positions with seat belts on the rear seats are the safest places for children. Always use seat belts and child restraints.

Children and Seating Position with Side Air Bag:
Allowing anyone to lean over or against the front door is dangerous. If the vehicle is equipped with side air bags, the impact of an inflating side air bag could cause serious injury or death to the person. Children are more likely to sleep in the vehicle; when they do, they are more at risk in the front passenger's seat that has a side air bag because they may slump over into the path of the seatback-mounted air bag. Furthermore, leaning over or against the doors could block the side air bag and eliminate the advantages of supplemental protection. With the front air bag and the additional side air bag that deploys from outboard shoulder of the front passenger seat, the rear seat is always a better location for children who are prone to sleeping. If a child can't be seated in the rear, do not allow the child to lean over or against the side window, even if the child is seated in a child-restraint system.

<tbody>
<tr>
<td>Your Mazda is equipped with LATCH lower anchors for attachment of specially designed LATCH child-restraint systems in the rear seats. When using these anchors to secure a child-restraint system, refer to “LATCH Child-Restraint Systems” (page 2-53).</td>
</tr>
</tbody>
</table>
Installing Child-Restraint Systems

Accident statistics reveal that a child is safer in the rear seats (both second-row seats and third-row center seat). The front passenger's seat is clearly the worst choice for any child under 12, and with rear-facing child-restraint systems it is clearly unsafe due to air bags.

Some child-restraint systems now come with tethers and therefore must be installed on the seats that take tethers to be effective. In your Mazda, tethered child-restraint systems can only be accommodated in the three specific seating positions on the rear seats (both second-row seats and third-row center seat).

Some child-restraint systems also employ specially designed LATCH attachments; refer to “LATCH Child-Restraint Systems” (page 2-53).

⚠️ WARNING

Tethered Child-Restraint Systems Work Only on Tether-Equipped Rear Seats:
Installation of a tether equipped child-restraint system in the front passenger's seat or the third-row outboard seats defeats the safety design of the system and will result in an increased chance of serious injury if the child-restraint system goes forward without benefit of being tethered. Place tether equipped child-restraint systems where there are tether anchors.

▼ Second-Row Seats Child-Restraint System Installation *

Follow these instructions when using a child-restraint system, unless you are attaching a LATCH-equipped child-restraint system to the rear LATCH lower anchors. Refer to “LATCH Child-Restraint Systems” (page 2-53).

NOTE

Follow the child-restraint system manufacturer's instructions carefully. If you are not sure whether you have a LATCH system or tether, check in the child-restraint system manufacturer's instructions and follow them accordingly. Depending on the type of child-restraint system, it may not employ seat belts which are in automatic locking mode.

* Some models. 2-45
Essential Safety Equipment

Child Restraint

1. If the seat in which you install a child-restraint system has a seat slide function, slide the seat as far back as possible.

2. Make sure the seatback is securely latched by pushing it back until it is fully locked.

3. Secure the child-restraint system with the lap portion of the lap/shoulder belt. See the manufacturer's instructions on the child-restraint system for belt routing instructions.

4. To get the retractor into the automatic locking mode, pull the shoulder belt portion of the seat belt until the entire length of the belt is out of the retractor.

5. Push the child-restraint system firmly into the vehicle seat. Be sure the belt retracts as snugly as possible. Adjust the angle of the seat belt buckle so that the belt is not loose. Clicking from the retractor will be heard during retraction if the system is in the automatic locking mode. If the belt does not lock the seat down tight, repeat this step.

NOTE

Inspect this function before each use of the child-restraint system. You should not be able to pull the shoulder belt out of the retractor while the system is in the automatic locking mode. When you remove the child-restraint system, be sure the belt fully retracts to return the system to emergency locking mode before occupants use the seat belts.

6. If your child-restraint system requires the use of a tether strap, hook and tighten the tether strap after raising the head restraint by following the manufacturer's instructions.
**WARNING**

**Child-Restraint Tether Usage:**
Using the tether or tether anchor to secure anything but a child-restraint system is dangerous. This could weaken or damage the tether or tether anchor and result in injury. Use the tether and tether anchor only for a child-restraint system.

**Incorrect Attachment of the Tether Strap:**
Routing the tether strap on top of the head restraint is dangerous. In a collision, the tether strap could slide off the head restraint, and loosen the child-restraint system. The child-restraint system could move which may result in death or injury to the child. Always route the tether strap between the head restraint posts.

**Third-Row Center Seat Child-Restraint System Installation**

In the third-row seat, tether equipped child-restraint systems belong only in the center seat where there is a tether anchor available. Follow these instructions when using a child-restraint system.

1. Secure the child-restraint system with a lap belt. Adjust for a snug fit by pulling on the loose end of the belt webbing.

2. If your child-restraint system requires the use of a tether strap, peel back the carpeting in the rear luggage compartment to expose the anchor bracket (above the marking).
Child Restraint

Anchor bracket location

3. Hook the tether strap by following the child-restraint system manufacturer's instructions.

Tether strap position

---

**WARNING**

Child-Restraint Tether Usage:
Using the tether or tether anchor to secure anything but a child-restraint system is dangerous. This could weaken or damage the tether or tether anchor and result in injury. Use the tether and tether anchor only for a child-restraint system.

---

**NOTE**

Follow the child-restraint system manufacturer's instructions carefully. Depending on the type of child-restraint system, it may not employ seat belts which are in automatic locking mode.

1. Secure the child-restraint system with the lap portion of the lap/shoulder belt. See the instructions on the child-restraint system for belt routing instructions.

Third-Row Outboard Seats Child-Restraint System Installation

The third-row outboard seats cannot accommodate LATCH-type child-restraint systems or tethers, therefore these systems must be installed on the other seat positions such as the second-row or third-row center seat. If this not possible, LATCH-type child-restraint systems or tethers should be installed using seat belts depending on whether the child-restraint manufacturer allows their use without LATCH attachments and tether anchors.

Follow these manufacturer's instructions when using a child-restraint system.
2. To get the retractor into the automatic locking mode, pull the shoulder belt portion of the seat belt until the entire length of the belt is out of the retractor.

3. Push the child-restraint system firmly into the vehicle seat. Be sure the belt retracts as snugly as possible. Clicking from the retractor will be heard during retraction if the system is in the automatic locking mode. If the belt does not lock the seat down tight, repeat this step.

**NOTE**

Inspect this function before each use of the child-restraint system. You should not be able to pull the shoulder belt out of the retractor while the system is in the automatic locking mode. When you remove the child-restraint system, be sure the belt fully retracts to return the system to emergency locking mode before occupants use the seat belts.

**▼If You Must Use the Front Seat for Children**

If you cannot put all children in the rear seats, at least put the smallest children in the rear and be sure the largest child up front uses the shoulder belt over the shoulder.

NEVER put a rear-facing child-restraint system on the front passenger seat, even with a seat weight sensor equipped vehicle.

This seat is also not set up for tethered child-restraint systems, put them in one of the rear seat positions set up with tether anchors.

Likewise the LATCH child-restraint system cannot be secured in the front passenger's seat and should be used in the second-row seats.

Don't allow anyone to sleep against the side window if you have an optional side air bag, it could cause serious injuries to an out of position occupant. As children more often sleep in cars, it is better to put them in the rear seat. If installing the child-restraint system on the front seat is unavoidable, follow these instructions when using a front-facing child-restraint system in the front passenger's seat.
NOTE
To check if your front seats have side air bags:
Every Mazda side air bag will have a “SRS AIRBAG” tag on the outboard shoulder of the front seats.

WARNING
Front Passenger's Seat Position:
As your vehicle has front air bags and doubly so if your vehicle has side air bags, a front-facing child-restraint system should be put on the front seat only when it is unavoidable. Even if the front passenger air bag deactivation indicator light illuminates, always move the seat as far back as possible, because the force of a deploying air bag could cause serious injury or death to the child.

Rear-Facing Child-Restraint System:
Rear-facing child-restraint systems on the front seat are particularly dangerous. The child-restraint system can be hit by a deploying air bag and moved violently backward resulting in serious injury or death to the child. Even though you may feel assured that the front passenger air bag will not deploy based on the fact that the front passenger air bag deactivation indicator light illuminates, NEVER use a rear-facing child-restraint system in the front seat with an air bag that could deploy even in a moderate collision.

WARNING
Children and Seating Position with Side Air Bag:
Allowing anyone to lean over or against the front door is dangerous. If the vehicle is equipped with side air bags, the impact of an inflating side air bag could cause serious injury or death to the person. Children are more likely to sleep in the vehicle; when they do, they are more at risk in the front passenger's seat that has a side air bag because they may slump over into the path of the seatback-mounted air bag. Furthermore, leaning over or against the doors could block the side air bag and eliminate the advantages of supplemental protection. With the front air bag and the additional side air bag that deploys from outboard shoulder of the front passenger seat, the rear seat is always a better location for children who are prone to sleeping. If a child can’t be seated in the rear, do not allow the child to lean over or against the side window, even if the child is seated in a child-restraint system.
Front Passenger's Seat Child-Restraint System Installation

1. Slide the seat as far back as possible.

2. Secure the child-restraint system with the lap portion of the lap/shoulder belt. See the manufacturer's instructions on the child-restraint system for belt routing instructions.

3. To get the retractor into the automatic locking mode, pull the shoulder belt portion of the seat belt until the entire length of the belt is out of the retractor.

4. Push the child-restraint system firmly into the vehicle seat. Be sure the belt retracts as snugly as possible. Clicking from the retractor will be heard during retraction if the system is in automatic locking mode. If the belt does not lock the seat down tight, repeat the previous step and also this one.

5. Make sure the front passenger air bag deactivation indicator light illuminates after installing a child-restraint system on the front passenger seat. Refer to Front passenger air bag deactivation indicator light on page 2-63.

NOTE

- Inspect this function before each use of the child-restraint system. You should not be able to pull the shoulder belt out of the retractor while the system is in the automatic locking mode. When you remove the child-restraint system, be sure the belt fully retracts to return the system to emergency locking mode before occupants use the seat belts.

- Follow the child-restraint system manufacturer's instructions carefully. Depending on the type of child-restraint system, it may not employ seat belts which are in automatic locking mode.
**WARNING**

**Seating a Child in a Child-Restraint System on the Front Passenger Seat With the Front Passenger Air Bag Deactivation Indicator Light Not Illuminated:**

Seating a child in a child-restraint system installed on the front passenger seat with the front passenger air bag deactivation indicator light not illuminated is dangerous. If this indicator light does not illuminate even when the total seated weight is less than approximately 30 kg (66 lb), this means that the front passenger front and side air bags, and seat belt pretensioner are ready for deployment. If an accident were to deploy an air bag, a child sitting in the front passenger seat could be seriously injured or killed. If the indicator light does not illuminate after installing a child-restraint system on the front passenger seat, install the child-restraint system on the rear seat and consult an Authorized Mazda Dealer as soon as possible. While it is always better to install any child-restraint system on the rear seat, it is essential to do so if the front passenger air bag deactivation indicator light does not illuminate (page 2-63).
LATCH Child-Restraint Systems

Your Mazda is equipped with LATCH lower anchors for attachment of specially designed LATCH child-restraint systems in the second-row seats. Both anchors must be used, otherwise the seat will bounce around and put the child in danger. Most LATCH child-restraint systems must also be used in conjunction with a tether to be effective. If they have a tether you must use it to better assure your child's safety.

⚠️ WARNING

**Manufacturer's Instructions for Child-Restraint System:**

An unsecured child-restraint system is dangerous. In a sudden stop or a collision it could move causing serious injury or death to the child or other occupants. Make sure any child-restraint system is properly secured in place according to the child-restraint system manufacturer's instructions.

**Unsecured Child-Restraint System:**

An unsecured child-restraint system is dangerous. In a sudden stop or a collision it could move causing serious injury or death to the child or other occupants. Follow the child-restraint system manufacturer's instructions on belt routing to secure the seat just as you would with a child in it so that nobody is tempted to put a child in an improperly secured seat later on. When not in use, remove it from the vehicle or fasten it with a seat belt, or latch it down to BOTH LATCH lower anchors for LATCH child-restraint systems.

**LATCH Child-Restraint Systems:**

Not following the child-restraint system manufacturer's instructions when installing the child-restraint system is dangerous. If seat belts or a foreign object prevent the child-restraint system from being securely attached to the LATCH lower anchors and the child-restraint system is installed improperly, the child-restraint system could move in a sudden stop or collision causing serious injury or death to the child or other occupants. When installing the child-restraint system, make sure there are no seat belts or foreign objects near or around the LATCH lower anchors. Always follow the child-restraint system manufacturer's instructions.
LATCH Child-Restraint System Installation Procedure (Second-Row Seats)

1. Slide the second-row seat as far back as possible.

2. Raise the reclining lever and lower the seatback forward.

3. Raise the seatback to the most upright position. Make sure the seatback is securely latched by rocking the seatback.

4. Make sure the seatback is securely latched by pushing it back until it is fully locked.

5. Expand the area between the seat bottom and the seatback slightly to verify the locations of the LATCH lower anchors.

6. Secure the child-restraint system using BOTH LATCH lower anchors, following the child-restraint system manufacturer's instruction.

7. If your child-restraint system came equipped with a tether, that probably means it is very important to properly secure the tether for child safety, please carefully follow the child-restraint system manufacturer's instructions when installing tethers.

Anchor bracket location
Tether strap position

![Diagram of Tether Strap Position]

**WARNING**

**Child-Restraint Tether Usage:**
Using the tether or tether anchor to secure anything but a child-restraint system is dangerous. This could weaken or damage the tether or tether anchor and result in injury. Use the tether and tether anchor only for a child-restraint system.

**Incorrect Attachment of the Tether Strap:**
Routing the tether strap on top of the head restraint is dangerous. In a collision, the tether strap could slide off the head restraint, and loosen the child-restraint system. The child-restraint system could move which may result in death or injury to the child. Always route the tether strap between the head restraint posts.
Supplemental Restraint Systems (SRS) Precautions

The front and side supplemental restraint systems (SRS) include up to 4 air bags (verify “SRS AIRBAG” location indicator marks).

They are located in:

- The steering wheel hub (driver air bag)
- The front passenger dashboard (front passenger air bag)
- The outboard sides of the front seatbacks (side air bags)*

These systems operate independently depending on the type of accident encountered; if you have side air bags, the side air bags are not likely to deploy on both sides in the same accident because a vehicle is not often hit from both sides. The side air bags and the frontal air bag system will not normally deploy during the same type of accident unless a combination of frontal and side impacts occur.

The air bag supplemental restraint systems are designed to provide supplemental protection only in the front seats in certain situations, so seat belts are always important in the following ways:

Without seat belt usage, the air bags cannot provide adequate protection during an accident. Seat belt usage is necessary to:

- Keep the occupant from being thrown into an inflating air bag.
- Reduce the possibility of injuries during an accident that is not designed for air bag inflation, such as roll-over or rear impact.
- Reduce the possibility of injuries in frontal or side collisions that are not severe enough to activate the air bags.
- Reduce the possibility of being thrown from your vehicle.
- Reduce the possibility of injuries to lower body and legs during an accident because the air bags provide no protection to these parts of the body.
- Hold the driver in a position which allows better control of the vehicle.

Small children must be protected by a child-restraint system as stipulated by law in every state and province. In certain states and provinces, larger children must use a child-restraint system (page 2-41).

Carefully consider which child-restraint system is necessary for your child and follow the installation directions in this Owner's Manual as well as the child-restraint system manufacturer's instructions.
WARNING

Air Bags without Seat Belts:
Depending only on the air bags for protection during an accident is dangerous. Alone, air bags may not prevent serious injuries. The appropriate air bags can be expected to inflate only in the first collision with frontal, near frontal or side forces that are at least moderate. Vehicle occupants should always wear seat belts.

Child in the Front Seat:
Placing a child, 12 years or under, in the front seat is dangerous. The child could be hit by a deploying air bag and be seriously injured or even killed. Even if the front passenger air bag deactivation indicator light illuminates, always move the front passenger seat as far back as possible. A sleeping child is more likely to lean against the door and be hit by the side air bag in a moderate, right-side collision. Whenever possible, always secure a child 12 years and under on the rear seats with an appropriate child-restraint system for the child's age and size.

Rear-Facing Child-Restraint System:
Rear-facing child-restraint systems on the front seat are particularly dangerous. The child-restraint system can be hit by a deploying air bag and moved violently backward resulting in serious injury or death to the child. Even though you may feel assured that a front passenger air bag will not deploy based on the fact that the front passenger air bag deactivation indicator light illuminates, NEVER use a rear-facing child-restraint system in the front seat with an air bag that could deploy even in a moderate collision.

Seating Position with Front Air Bags:
Sitting too close to the air bag modules or placing hands or feet on them is extremely dangerous. Front air bags inflate with great force and speed. Serious injuries could occur if someone is too close. The driver should always hold onto only the rim of the steering wheel. The front seat passenger should keep both feet on the floor. Front seat occupants should adjust their seats as far back as possible and always sit upright against the seatbacks with seat belts worn properly.

2-57
WARNING

Seating Position with Side Air Bags:
Sitting too close to the side air bag modules or placing hands on them is extremely dangerous. A side air bag inflates with great force and speed directly out of the outboard shoulder of the front seat and expands along the front door on the side the car is hit.
Serious injury could occur if someone is sitting too close to the door or leaning against a window in the front seats or if rear seat occupants grab the sides of the front seatbacks. Furthermore, sleeping up against the door or hanging out the driver's-side window while driving could block the side air bag and eliminate the advantages of supplemental protection. Give the side air bags room to work by sitting in the center of the seat while the vehicle is moving with seat belts worn properly.

Front Air Bag Modules Located in the Steering Wheel Hub and the Dashboard:
Attaching an object to the front air bag modules or placing something in front of them is dangerous. In an accident, the object could interfere with front air bag inflation and injure the occupants.
Always keep the front air bag modules free of objects.

Side Air Bag Modules:
Attaching things to the front seat in such a way as to cover the outboard side of the seat in any way is dangerous. In an accident the object could interfere with the side air bag, which inflates from the outboard side of the front seats, impeding the added protection of the side air bag system or redirecting the air bag in a way that is dangerous. Furthermore, the bag could be cut open spewing exhaust.
Do not hang net bags, map pouches or backpacks with side straps on the front seats. Never use seat covers on the front seats. Always keep the side air bag modules in your front seats free to deploy in the event of a side collision.

Hot Air Bag Inflators:
Hot air bag inflators are dangerous. Immediately after inflation, the inflators in the steering wheel, dashboard or the seatbacks are very hot. You could get burned. Don't touch the internal components of the air bag modules after the bags have inflated.

Installation of Front-End Equipment:
Installation of front-end equipment, such as frontal protection bar (kangaroo bar, bull bar, push bar, etc.), snowplow, or winches, is dangerous. The air bag crash sensor system could be affected. This could cause air bags to inflate unexpectedly, or it could prevent the air bags from inflating during an accident. Front occupants could be seriously injured. Never install any front-end equipment to your vehicle.
WARNING

Suspension Adjustment:
Adjusting the vehicle suspension is dangerous. If the vehicle's height or the suspension is changed, the vehicle will be unable to accurately detect a collision resulting in incorrect or unexpected air bag deployment and the possibility of serious injuries.

Modification of the Supplemental Restraint System:
Modifying the components or wiring of the supplemental restraint system is dangerous. You could accidentally activate it or make it inoperable. Don't make any modifications to the supplemental restraint system. This includes installing trim, badges, or anything else over the air bag modules. It also includes installing extra electrical equipment on or near system components or wiring. An Authorized Mazda Dealer can provide the special care needed in the removal and installation of front seats. It is important to protect the air bag wiring and connections to assure that the bags do not accidentally deploy, the driver seat slide position sensor and front passenger seat weight sensors are not damaged and that the seats retain an undamaged air bag connection.

NOTE

- When an air bag deploys, a loud inflation noise can be heard and some smoke will be released. Neither is likely to cause injury, however, the texture of the air bags may cause light skin injuries on body parts not covered with clothing through friction.
- Should you sell your Mazda, we urge you to tell the new owner of its air bag systems and that familiarization with all instructions about them, from the Owner's Manual, is important.
Supplemental Restraint System Components

The supplemental restraint systems (SRS) have two basic subsystems:

- The air bag system with inflators and air bags.
- The electrical system with crash sensors and diagnostic module.

The air bags are mounted in the following locations:

- The steering wheel hub
- The front passenger dashboard
- The outboard sides of the front seatbacks *

The air bags are out of sight until activated.

* Some models.

(2) Front seats
(3) Front dual stage inflators and air bags
(4) Front air bag sensor
(5) Front passenger air bag deactivation indicator light (page 2-63)
(6) Front seat belt pretensioner and load limiting systems (page 2-35)
(7) Front passenger seat weight sensors (page 2-63)
(8) Front passenger seat weight sensor control module
(9) Crash sensors and diagnostic module (SAS unit)
(10) Driver and front passenger seat belt buckle switches (page 2-63)
Essential Safety Equipment

SRS Air Bags

▼ Side Air Bag System Components *

(1) Side inflators and air bags
(2) Front seats
(3) Crash sensors and diagnostic module (SAS unit)
(4) Side crash sensor

*Some models.
How the Air Bags Work

▼ How the Front Air Bags Work

When air bag crash sensors detect a frontal impact of greater than moderate force, an electrical current is sent to the inflators. Gases are produced to inflate the front air bags and after the inflation, the front air bags quickly deflate. The front air bags will function only once. After that, the front air bags will not work again and must be replaced. Only an Authorized Mazda Dealer can replace the system components.

The front, dual stage air bags control air bag inflation in two energy stages. During an impact of moderate severity the front air bags deploy with lesser energy, whereas during more severe impacts, they deploy with more energy. Deployment of the front air bags may differ between the driver and the front passenger depending on the driver seat position, front passenger weight and front seat belt usage, which allow for further controlling of the system.

![Diagram of air bags deploying]

The front air bags will deploy only in a frontal or frontal offset impact.

**Driver seat slide position sensor**

Your vehicle is equipped with a driver seat slide sensor as a part of the supplemental restraint system. The sensor is located under the driver seat. The sensor determines whether the driver seat is fore or aft of a reference position and sends the seat position to the crash sensors and diagnostic module (SAS unit). The sensor is also designed to control the deployment of the driver air bag depending on how close the driver seat is to the steering wheel.

The air bag/front seat belt pretensioner system warning light flashes if the sensor has a possible malfunction (page 2-71).
Essential Safety Equipment

SRS Air Bags

Front passenger seat weight sensors
Your vehicle is also equipped with the front passenger air bag deactivation indicator light (page 2-51). These sensors are located under both of the front passenger seat rails. These sensors determine the total seated weight on the front passenger seat. The sensors are also designed to prevent the front passenger front and side air bags and seat belt pretensioner system from inflating if the total seated weight is less than approximately 30 kg (66 lb).

To reduce the chance of injuries caused by deployment of the front passenger air bag, the system deactivates the front passenger front and side air bags and also the seat belt pretensioner system when:

- There is no passenger in the front passenger seat. (The front passenger air bag deactivation indicator light does not illuminate.)
- The total seated weight on the front passenger seat is less than approximately 30 kg (66 lb). (The front passenger air bag deactivation indicator light illuminates.)

This system shuts off the front passenger front and side air bags and seat belt pretensioner system, so make sure the front passenger air bag deactivation indicator light illuminates according to the chart below.

The air bag/front seat belt pretensioner system warning light flashes and the front passenger air bag deactivation indicator light illuminates if the sensors have a possible malfunction. If this happens, the front passenger front and side air bags and seat belt pretensioner system will not deploy.

Front passenger air bag deactivation indicator light
This indicator light illuminates to remind you that the front passenger front and side air bags and seat belt pretensioner will not deploy during a collision.

If the front passenger weight sensors are normal, the indicator light illuminates when the ignition switch is turned to the ON position. After about 6 seconds it goes out.
The front passenger air bag deactivation indicator light illuminates or is off under the following conditions:

<table>
<thead>
<tr>
<th>Total seated weight on the front passenger seat</th>
<th>Front passenger air bag deactivation indicator light</th>
<th>Front passenger front and side air bags</th>
<th>Front passenger seat belt pretensioner system</th>
</tr>
</thead>
<tbody>
<tr>
<td>Empty (Not occupied)*</td>
<td>OFF</td>
<td>OFF</td>
<td>OFF</td>
</tr>
<tr>
<td>Less than approx. 30 kg (66 lb)</td>
<td>ON</td>
<td>OFF</td>
<td>OFF</td>
</tr>
<tr>
<td>Approx. 42 kg (93 lb) or more</td>
<td>OFF</td>
<td>ON</td>
<td>ON</td>
</tr>
</tbody>
</table>

* If the front passenger seat belt is buckled, the front passenger air bag deactivation indicator light illuminates, however this does not indicate a malfunction.

If the front passenger air bag deactivation indicator light does not illuminate when the ignition switch is turned to the ON position and does not illuminate as indicated in the above chart, do not allow a child to sit in the front passenger seat and consult an Authorized Mazda Dealer as soon as possible. The system may not work properly in an accident.

---

**WARNING**

Decreasing the Total Seated Weight on the Front Passenger Seat:

When an adult or large child sits on the front passenger seat, decreasing the total seated weight on the front passenger seat from the total seated weight of approximately 42 kg (93 lb) required for air bag deployment is dangerous. The front passenger seat weight sensors will detect the reduced total seated weight condition and the front passenger front and side air bags and seat belt pretensioner system will not deploy during an accident. The front passenger will not have the supplementary protection of the air bag, which could result in serious injury. Decreasing the total seated weight on the front passenger seat from the total seated weight of approximately 42 kg (93 lb) could result in an air bag not deploying under the following conditions, for example:

- A rear passenger pushes up on the front passenger seat with the feet.
- Luggage or other items placed under the front passenger seat or between the front passenger seat and driver seat that push up the front passenger seat bottom.
- The front passenger seat occupant sits in a manner that does not place the entire weight of the occupant on the seat such as by sitting too close to the door, grasping the assist grip or the rim of the moonroof and sitting with the seatback reclined too far.
- Any accessories which might decrease the total seated weight on the front passenger seat are attached to the front passenger seat.

The front passenger front and side air bags and seat belt pretensioner systems will deactivate if the total seated weight on the front passenger seat is close to 30 kg (66 lb) and they will reactivate before the weight exceeds 42 kg (93 lb).
ESSENTIAL SAFETY EQUIPMENT

SRS Air Bags

⚠️ WARNING

Increasing the Total Seated Weight on the Front Passenger Seat:
When an infant or small child sits on the front passenger seat, increasing the total seated weight on the front passenger seat from the total seated weight of approximately 30 kg (66 lb) is dangerous. The front passenger seat weight sensors will detect the increased total seated weight, which could result in the unexpected deployment of the front passenger front and side air bags and seat belt pretensioner system in an accident and serious injury. Increasing the total seated weight on the front passenger seat beyond the total seated weight of approximately 30 kg (66 lb) could result in the front passenger front and side air bags and seat belt pretensioner system deployment in an accident under the following conditions, for example:

- Luggage or other items are placed on the seat with the child in the child-restraint system.
- A rear passenger or luggage push or pull down on the front passenger seatback.
- A rear passenger steps on the front passenger seat rails with the feet.
- Luggage or other items are placed on the seatback or hung on the assist grip, head restraint or armrest.
- The seat is washed.
- Liquids are spilled on the seat.
- The front passenger seat is moved backward, pushing into luggage or other items placed behind it.
- The front passenger seatback contacts the second-row seat.
- Luggage or other items are placed between the front passenger seat and driver seat.
- Any accessories which might increase the total seated weight on the front passenger seat are attached to the front passenger seat.

The front passenger front and side air bags and seat belt pretensioner systems will deactivate if the total seated weight on the front passenger seat is close to 30 kg (66 lb) and they will reactivate before the weight exceeds 42 kg (93 lb).
CAUTION

- To assure proper deployment of the front air bag and to prevent damage to the sensors in the front seat bottoms:
  - Do not place sharp objects on the front seat bottoms or leave heavy luggage on them.
  - Do not spill any liquids on the front seats or under the front seats.
- To allow the sensors to function properly, always perform the following:
  - Adjust the front seats as far back as possible and always sit upright against the seatbacks with seat belts worn properly.
  - If you place your child on the front passenger seat, secure the child-restraint system properly and slide the front passenger seat as far back as possible (page 2-51).

NOTE

- The system requires about 10 seconds to alternate between turning the front passenger front and side air bags and seat belt pretensioner system on or off.
- The front passenger air bag deactivation indicator light may illuminate repeatedly if luggage or other items are put on the front passenger seat, or if the temperature of the vehicle's interior changes suddenly.
- The front passenger air bag deactivation indicator light may illuminate for 10 seconds if the total seated weight on the front passenger seat changes.
- If the front passenger air bag deactivation indicator light does not illuminate after installing a child-restraint system on the front passenger seat, install the child-restraint system on the rear seat and consult an Authorized Mazda Dealer as soon as possible.

Driver and front passenger buckle switches

The buckle switches on the front seat belts detect whether or not the front seat belts are securely fastened and further control the deployment of the air bags.
How the Side Air Bags Work*

When air bag crash sensors detect a side impact of greater than moderate force, an electrical current is sent to the inflators. Gases are produced to inflate the side air bags and after the inflation, the side air bags quickly deflate. The side air bags will function only once. After that, the side air bags will not work again and must be replaced. Only an Authorized Mazda Dealer can replace the systems.

WARNING

Damaged Side Air Bag Wiring under the Front Seats:
Placing luggage or other objects under the front seats is dangerous. The side air bag wiring could be damaged, and in the event of a side collision, the side air bags may not deploy, which could result in death or serious injury. To prevent damage to the side air bag wiring, do not place luggage or other objects under the front seats.

Air Bag Activation/Deactivation

NOTE

If the front passenger seat weight sensors detect a total seated weight on the front passenger seat is less than approximately 42 kg (93 lb), the front passenger front and side air bags and seat belt pretensioner may not inflate (page 2-63).
Front air bag activation
A greater than moderate impact will cause the front air bags to inflate in the following cases:

- Hitting a solid wall straight on at greater than about 22 km/h (14 mph).
- Hitting a curb, pavement edge or hard object.
- Landing hard or the vehicle falling.
- Frontal impact within about a 30 degree range from head-on to the vehicle.
- Driving into a big hole or hitting the far side of a hole.

Limitations to front air bag activation
Depending on the severity of impact, the front air bags may not inflate in the following cases:

- Impacts involving trees or poles cause severe cosmetic damage but may not have enough stopping force to activate the air bag.
- Frontal offset impact to the vehicle may not provide the stopping force necessary for air bag deployment.
Essential Safety Equipment

SRS Air Bags

- Rear-ending or running under a truck's tail gate may not provide the stopping force necessary for air bag deployment.

Non-activation of front air bags
Front air bags will not normally inflate in the following cases:
- Collision from the rear.
- Impact to the side, but it may deploy the side air bags.
- Vehicle roll-over, may deploy the side air bags but not the front air bags.

Side air bag activation
Greater than moderate impact to one side of the vehicle (driver or passenger side areas) will cause a side air bag on that side to inflate, but it will not normally deploy the front air bags.

Limitations to side air bag activation
Depending on the severity of impact, a side air bag may not inflate in the following cases:
- Frontal offset impact may not provide enough side impact to deploy the side air bags.
- Side impacts involving trees or poles can cause severe cosmetic damage but may not have enough impact force to activate the side air bags.
Vehicle roll-over may not provide enough side force to deploy the side air bags.

Side impacts with two-wheeled vehicles may not provide enough force to deploy the side air bags.

Non-activation of side air bag
A side air bag will not normally inflate in the following cases:
- Collision from the rear.
- Collision from the front, but it may deploy the front air bags.

Constant Monitoring
The following components of the air bag systems are monitored by a diagnostic system:
- SAS unit
- Front air bag sensor
- Air bag modules
- Side crash sensors
- Front seat belt pretensioners
- Related wiring
- Driver seat slide position sensor
- Front passenger seat weight sensors
- Driver and front passenger seat belt buckle switches

The diagnostic module continuously monitors the system's readiness. This begins when the ignition switch is turned to the ON position and continues while the vehicle is being driven.

Air Bag/Front Seat Belt Pretensioner System Warning Light

If the air bag/front seat belt pretensioner system is normal, the warning light illuminates when the ignition switch is turned to the ON position or after the engine is cranked. After about 6 seconds it goes out.

*Some models.
A system malfunction is indicated when the warning light constantly flashes, constantly illuminates or doesn’t illuminate at all when the ignition switch is turned to the ON position. If any of these occur, consult an Authorized Mazda Dealer as soon as possible. The system may not work in an accident.

**WARNING**

*Self-Servicing the Air Bag/Pretensioner Systems:*
Self-servicing or tampering with the systems is dangerous. An air bag/pretensioner could accidentally activate or become disabled. This could cause serious injuries. Never tamper with the systems and always have an Authorized Mazda Dealer perform all servicing and repairs.

**WARNING**

*Damaged Air Bag/Seat Belt Pretensioner System Components:*
Expended or damaged air bag or seat belt pretensioner units must be replaced after any collision which caused them to deploy or damage them. Only a trained Authorized Mazda Dealer can fully evaluate these systems to see that they will work in the next accident. Driving with an expended or damaged air bag or pretensioner units will provide you reduced protection in the next accident and you could be injured or killed.

**Removing Interior Parts:**
Removing any components such as the front seats (if side air bags are equipped), front dashboard, the steering wheel or parts containing air bag parts or sensors is dangerous. These parts contain essential air bag components. The air bag could accidentally activate and cause serious injuries. Always have an Authorized Mazda Dealer remove these parts.

**Maintenance**

The air bag systems do not require regular maintenance. But if any of the following occurs, take your vehicle to an Authorized Mazda Dealer as soon as possible:

- The air bag system warning light flashes.
- The air bag system warning light remains illuminated.
- The air bag system warning light does not illuminate when the ignition switch is turned to the ON position.
- The air bags have deployed.
- Front passenger air bag deactivation indicator light does not illuminate when the ignition switch is turned to the ON position or does not illuminate as indicated in the chart. For more details about this indicator light and this chart, refer to “Front passenger seat weight sensors” (page 2-63).
**WARNING**

Air Bag Disposal:
Improper disposal of an air bag or a vehicle with live air bags in it can be extremely dangerous. Unless all safety procedures are followed, injury can result. Ask an Authorized Mazda Dealer how to safely dispose of an air bag or how to scrap an air bag equipped vehicle.

**NOTE**

If it becomes necessary to have the components or wiring system for the supplementary restraint system modified to accommodate a person with certain medical conditions in accordance with a certified physician, contact an Authorized Mazda Dealer, refer to “Customer Assistance (U.S.A.)” (page 9-2).

Keys

⚠️ WARNING

Keys and Children:
Leaving children in a vehicle with the key is dangerous. This could result in someone being badly injured or even killed. These new kinds of keys are fascinating to children. They could play with power windows or other controls, or even make the vehicle move. Don’t leave the keys in your vehicle with children and keep them in a place where your children will not find or play with them.

NOTE

- (With immobilizer system)
  Refer to Immobilizer System (page 3-28) for information regarding keys and engine starting.

- (With theft-deterrent system)
  Refer to Theft-Deterrent System (page 3-30) for information regarding keys and the prevention of vehicle and vehicle contents theft.

The keys operate all locks.

With keyless entry system

Retractable type key

Key code number plate

Without keyless entry system

Key code number plate

A code number is stamped on the plate attached to the key set; detach this plate and store it in a safe place (not in the vehicle) for use if you need to make a replacement key.

NOTE

Write down the code number and keep it in a separate safe and convenient place, but not in the vehicle. If your key is lost, consult your Authorized Mazda Dealer and have your code number ready.
Key extend/retract method (Retractable type key)

To extend the key, press the release button.

To retract the key, press the release button and rotate the key into the holder.

Keyless Entry System*

This system remotely locks and unlocks the doors and the liftgate. It can also help you signal for attention. Opening and closing of the power sliding doors with the keyless entry system transmitter is also possible on power sliding door-equipped vehicles.

Press the button slowly and carefully.

⚠️ CAUTION

To avoid damage to the transmitter, do not:

- Drop it.
- Get it wet.
- Disassemble it.
- Expose it to heat or sunlight.

*Some models.
NOTE

- The keyless entry system is designed to operate up to about 2.5 m (8 ft) from the center of the vehicle, but this may vary due to local conditions.
- The system doesn't operate when the ignition switch is in the ON position.
- If the transmitter does not operate when pressing a button or the operation range becomes too small, the battery may be dead. To install a new battery, refer to Maintenance (page 3-6).
- Additional transmitters can be obtained at an Authorized Mazda Dealer. Up to 3 transmitters can be used with the keyless entry system per vehicle. Bring all transmitters to an Authorized Mazda Dealer when the electronic codes need to be reset.

▼ Transmitter

With power sliding doors

Without power sliding doors

The operation indicator light flashes when the buttons are pressed.

**Lock button**

To lock the doors and the liftgate, press the lock button and the hazard warning lights will flash once.

(U.S.A.)

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

(CANADA)

This device complies with RSS-210 of Industry CANADA. Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.
To confirm that all doors and the liftgate have been locked, press the lock button again within 5 seconds. If they are closed and locked, the horn will sound.

**NOTE**

**Without theft-deterrent system**
The hazard warning lights will flash once to indicate that all doors and the liftgate are locked.

**With theft-deterrent system**
- The hazard warning lights will not flash.
- The hazard warning lights only flash when the theft deterrent system is armed, refer to the theft-deterrent system (page 3-30).

**NOTE**

Confirm that all doors and the liftgate are locked visually or audibly by use of the double click.

**Unlock button**

To unlock the driver's door, press the unlock button and the hazard warning lights will flash twice.

To unlock all doors and the liftgate, press the unlock button again within 5 seconds.

**NOTE**

**Without theft-deterrent system**
The hazard warning lights will flash twice to indicate that all doors and the liftgate are unlocked.

**With theft-deterrent system**
- The hazard warning lights will not flash.
- The hazard warning lights only flash when the theft deterrent system is turned off, refer to the theft-deterrent system (page 3-30).

**NOTE**

After unlocking with the transmitter, all doors and the liftgate will automatically lock if one of the doors or the liftgate is not opened within about 30 seconds.

**Sliding door transmitter buttons**

If your Mazda has power sliding doors (page 3-12), the transmitter can open/close the sliding doors.
WARNING

Operating Power Sliding Doors with Transmitter:
Opening or closing the power sliding doors with the keyless entry system transmitter while not watching the doors move is dangerous. People or animals could be injured when the doors open along the rear sides and back to the rear fender, or in closing. Allowing children to use the transmitter could result in serious injuries despite the jam-safe feature. Always be sure that the doorway and rear fender area are clear before activating the power sliding doors and be particularly careful when using the keyless entry system transmitter. Be sure to view the doors opening or closing and do not operate a door on either side if you can't fully see it. Always make sure that you watch the power sliding doors close completely and be sure your children do not have access to the transmitter.

NOTE

- When a power sliding door is not completely closed, pressing the power sliding door open/close transmitter button will open the door completely.
- Press the button to stop the power sliding doors while they are opening/closing.

Panic button
If you witness from a distance someone attempting to break into or damage your vehicle, pressing the panic button will activate the vehicle's alarm.

NOTE

- The panic button will work whether any door or the liftgate is open or closed.

Turning on the alarm
Pressing the panic button for 1 second or more will trigger the alarm for about 2 minutes and 30 seconds, and the following will occur:
- The horn sounds intermittently.
- The hazard warning lights flash.

Turning off the alarm
Press any button on the transmitter.

Transmitter Maintenance

If the buttons on the transmitter are inoperable and the operation indicator light does not flash, the battery may be dead.
Replace with a new battery before the transmitter becomes unusable.
CAUTION

- Install the battery with the positive pole (+) facing down. Battery leakage could occur if it is not installed correctly.
- When replacing the battery, be careful not to bend the electrical terminals or get oil on them. Also be careful not to get dirt in the transmitter as it could be damaged.
- There is the danger of explosion if the battery is not correctly replaced.
- Replace only with the same type battery (CR1620 or equivalent).
- Dispose of used batteries according to the following instructions.
  - Insulate the plus and minus terminals of the battery using cellophane or equivalent tape.
  - Never disassemble.
  - Never throw the battery into fire and/or water.
  - Never deform or crush.

Replacing the transmitter battery

1. Unfold the key (page 3-2).

2. Insert a small screwdriver into the slot and push the tab to remove the key from the transmitter.

3. Insert a small screwdriver into the slot and gently pry open the transmitter.

4. Remove the battery.
5. Put in the new battery (CR1620 or equivalent) with the positive pole (+) facing down.

6. Align the front and back covers and snap the transmitter shut.

7. Install the key to the transmitter.

**Service**

If you have a problem with the keyless entry system, consult an Authorized Mazda Dealer.

If your transmitter is lost or stolen, bring all remaining transmitters to an Authorized Mazda Dealer as soon as possible for a replacement and to make the lost or stolen transmitter inoperative.

**CAUTION**

Radio equipment like this is governed by laws in the United States. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

**WARNING**

Unattended Children and Pets: Leaving a child or an animal unattended in a parked vehicle is dangerous. In hot weather, temperatures inside a vehicle can become high enough to cause brain damage or even death. Always take all children and animals with you or leave a responsible person with them.

Keys and Children: Leaving children in a vehicle with the key is dangerous. This could result in someone being badly injured or even killed. They could play with power windows or other controls, or even make the vehicle move. Don't leave the keys in your vehicle with children and keep them in a place where your children will not find or play with them.

Unlocked Doors: Unlocked doors in a moving vehicle are dangerous. Passengers can fall out if a door is accidentally opened and can more easily be thrown out in an accident. So keep all doors locked when driving.
\textbf{WARNING}

\textbf{Vehicles Left Unlocked:}
Leaving your vehicle unlocked is dangerous as children could lock themselves in a hot vehicle, which could result in death. Also, a vehicle left unlocked becomes an easy target for thieves and intruders. Always close all the windows, lock the doors and take the key with you when leaving your vehicle unattended.

\section*{\textbf{Locking, Unlocking with Key}}

Either front door can be locked/unlocked with the key. Turn the key toward the front to unlock, toward the back to lock.

\section*{\textbf{Locking, Unlocking with Transmitter}}*

The doors can be locked/unlocked by operating the keyless entry system transmitter, refer to Keyless Entry System (page 3-3).

\section*{\textbf{Locking, Unlocking with Door-Lock Knob}}

\textbf{Front doors}

To lock either front door from the inside, push the door-lock knob. To unlock, pull it out.

\textbf{NOTE}

When locking the doors this way, be careful not to leave the key inside the vehicle.

*Some models.
Sliding doors
To lock a sliding door from the inside, push down the door-lock knob. To unlock, pull it up.

To lock a sliding door with the door-lock knob from the outside, push down the door-lock knob and close the door.

NOTE
The left-side sliding door cannot be opened when the fuel-filler lid is open. Close the fuel-filler lid to open the sliding door.

Power Door Locks*

Locking, unlocking with key
All doors and the liftgate lock automatically when any front door is locked with the key. All doors and the liftgate unlock when the driver's door is unlocked and the key is held in the unlock position for one second or longer. Also, all doors and the liftgate unlock when the passenger's door is unlocked.

NOTE
Holding the key in the unlocked position in the driver's door lock for about a second unlocks all doors and the liftgate. To unlock only the driver's door, insert the key into the driver's door lock and turn the key briefly to the unlock position and then immediately return it to the center position.

* Some models.
**Locking, unlocking with door-lock switch**

All doors and the liftgate lock automatically when LOCK is pushed. They all unlock when the unmarked part of the door-lock switch is pushed.

**Sliding Door Open/Close (Manual Operation)**

To open, pull the inner door handle or the outer door handle.

**NOTE**

The left-side sliding door cannot be opened when the fuel-filler lid is open. Close the fuel-filler lid to open the sliding door.

To close, pull the inner door handle or outer door handle.

**NOTE**

(Without power sliding doors)

When closing the sliding door from the fully-opened position and from outside the vehicle, pull the outside door handle outward to release the latch and slide the door in the forward direction.
Knowing Your Mazda

Doors and Locks

▼Rear Door Child Safety Locks

These locks are intended to help prevent children from accidentally opening the sliding doors. Use them both whenever a child rides in the vehicle.
To lock the sliding doors, slide the child safety locks to the lock position before closing the doors.

▼Easy Closure (With Power Sliding Doors)

The Easy Closure system automatically closes the doors completely from the near-shut position.
This system also operates when the doors are closed manually.

⚠️ WARNING

Hands and Fingers Pinched in Closing Sliding Doors:
Placing hands or fingers around a sliding door is dangerous because the door closes automatically from the near-shut position, hands and fingers could get pinched and injured. When closing a sliding door, always keep hands and fingers away from the door.

NOTE

If a door handle is pulled while the easy closure function is operating, the easy closure function can be stopped.

▼Power Sliding Doors *

The power sliding doors open/close electrically by operating switches in the vehicle or on the keyless entry system transmitter.
To operate the power sliding doors with the keyless entry system transmitter, refer to Keyless Entry System (page 3-3).

With power sliding doors

The doors cannot be opened using the interior door handles or the power sliding door switches in the rear.

To open a door, pull the door-lock knob and do any one of the following:
• Pull the exterior door handle.
• Push the power sliding door button on the transmitter.
• Push the power sliding door switch located at the driver's seat (page 3-12).

Without power sliding doors

The doors cannot be opened from the inside whether the door-lock knobs are in the lock position or the unlock position.

To open a door, pull the door-lock knob and pull the exterior handle.

* Some models.
Electric power to the power sliding doors can be switched on and off with the power sliding doors main switch.

<table>
<thead>
<tr>

<td>Switches on electric power to the power sliding doors.</td>
</tr>
<tr>
<td>OFF</td>
<td>Switches off electric power to the power sliding doors.</td>
</tr>
</tbody>
</table>

**WARNING**

**Operating Power Sliding Doors:**
Opening or closing the power sliding doors while not watching the doors move is dangerous. People or animals could be injured when the doors open along the rear sides and back to the rear fender, or in closing. Because of unseen obstacles and the jam-safe feature a door may not close completely and, if left unnoticed, could result in serious injury or death if an occupant were to fall out of the vehicle. Always be sure that the doorway and rear fender area is clear before activating the power sliding doors. Be sure to view the power sliding doors opening or closing and make sure that you watch them close completely.

**WARNING**

**Moving the Vehicle while Closing Power Sliding Doors:**
Shifting out of Park (P) while the doors are moving is dangerous. The doors will not close completely and this could result in serious injury or death if an occupant were to fall out of the vehicle. Occupants in the vehicle will also not have full protection in a collision. Always be sure the doors completely close before you shift into gear and move the vehicle.

**Children and the Power Sliding Door Switches:**
Allowing children to operate the power sliding door switches and the keyless entry system is dangerous. Children are not aware of the dangers of people getting fingers and hands caught in moving doors. Never allow children to operate the power sliding door system.

**Open Windows and Power Sliding Doors:**
It is dangerous to stick your head or hands out the power sliding door windows while the doors are opening/closing. A head or hands could be caught resulting in serious injury. Never stick your head or hands out the power sliding door windows.
**WARNING**

**Entering or Exiting the Vehicle Parked on a Steep Downward Slope:** Entering or exiting a vehicle parked on a steep downward slope before the door has completely opened is dangerous. The door could unexpectedly move down resulting in serious injury. Make sure that the door has completely opened before exiting or entering the vehicle on a steep downward slope.

**NOTE**

- Do not apply unnecessary force to the doors when they are opening/closing electrically. Unnecessary force on the doors may cause them to reverse direction of movement automatically.
- When the vehicle is parked on a slope, electrical opening/closing of the doors may not operate. When the doors cannot be opened/closed electrically, press the power sliding doors main switch to the OFF position and open/close the doors manually.
- If there is a malfunction in the power sliding door system, a beep sound will be heard continuously. If this happens, press the power sliding doors main switch to the OFF position and the beep sound will stop. Consult an Authorized Mazda Dealer to have the power sliding doors checked.
- If the vehicle has satisfied all the following conditions for about 1 minute, a beep sound will be heard continuously and the sliding door cannot be opened or closed automatically. However, it does not indicate a malfunction.
  1. The vehicle speed is about 3.0 km/h (about 1.8 mph) or less.
  2. The select lever is not in the P range.
  3. The parking brake is not applied.
  4. The brake pedal is not depressed.
- If the vehicle is driven at about 3.0 km/h (about 1.8 mph) or more, the beep sound will stop and the sliding door functions will be enabled.
- The power sliding doors will not operate unless they are unlocked, and the power sliding doors main switch is in the ON position.
- The sliding doors can be opened using the power sliding door switches located at the driver's seat, the transmitter, or the exterior door handles even when the child safety locks are in the lock position (page 3-12).
- The fuel-filler lid does not open when the left power sliding door is opening.
NOTE
- The left power sliding door cannot fully open when the fuel-filler lid is open. To fully open the left power sliding door in this situation, carry out the following procedure:
  1. Close the left power sliding door.
  2. Close the fuel-filler lid.
  3. Open the left power sliding door.
- When the ABS warning light remains illuminated, the power sliding doors cannot be opened electrically (page 5-26).

Opening/Closing with Switches
1. Bring the vehicle to a complete stop.
2. Put the shift lever in park (P).
3. Set the parking brake.
4. Unlock the sliding doors.
5. Look to be sure that the area around the door is clear of people.
6. Press the power sliding doors main switch to the ON position.

If you attempt to operate the vehicle in any way other than the above conditions (except step 4) while the power sliding doors are opening/closing electrically, the beep sound will be heard. Moreover, a door that is sliding open will stop. When the above conditions are satisfied, you can resume power sliding door open/close operation with the switches.

Operation from the driver's seat
Operate the left/right power sliding door switch to open/close the left/right door.

When either power sliding door switch is pressed, the door controlled by that switch will open/close automatically after the beep sound is heard.

NOTE
- If a power sliding door switch is pressed again while the beep sound is being heard, the operation can be canceled.
- Press a power sliding door switch to stop the power sliding doors while they are opening/closing.

Operation from the rear seats
When the power sliding doors are completely closed/open and either rear power sliding door switch is pressed, the door where the switch was pressed opens/closes automatically after the beep sound is heard.

NOTE
- When a power sliding door is not completely closed and a rear power sliding door switch is pressed, the door completely opens automatically.
NOTE

- If a rear power sliding door switch is pressed again while the beep sound is being heard, the operation can be canceled.
- Press a rear power sliding door switch to stop the power sliding doors while they are opening/closing.

Opening/closing with door handles

When the power sliding doors are completely closed and a door is slid by the handle slightly in the direction of opening, the door completely opens automatically after the beep sound is heard.
When the doors are completely open and a door is slid by the handle 5 cm (2 in) in the direction of closing, the doors will completely close automatically after the beep sound is heard.

**Jam-safe equipment**

While a door is opening/closing electrically and the system detects a person or an object in the sliding door’s path, the door will slide in the reverse direction automatically.

---

**WARNING**

*Check Area Around Power Sliding Doors Before Operating:*

Not checking for occupants and objects around a power sliding door before opening/closing it is dangerous. The jam-safe equipment is designed to prevent jamming in the event an obstruction is in the sliding door’s path. However, if the jam-safe function detects an obstruction and slides the door in the reverse direction, an occupant in the door's path could be seriously injured. Always check the area around the power sliding doors before opening/closing them.

---

When the power sliding doors are sliding in the opening direction and an obstruction is detected in its path, the beep sound will be heard and the doors slide in the opposite direction approximately 10 cm (4 in) and stop. When the doors are sliding in the closing direction and an obstruction is detected, the beep sound will be heard and the doors open completely.

---

**NOTE**

If the power sliding door system repeatedly detects an obstruction in the open/close directions for a number of times, the door will be stopped.

---

**Power sliding doors main switch**

When the power sliding doors main switch is pressed to the OFF position, electrical open/close operation is not possible. The power sliding doors can still be opened/closed manually.
**WARNING**

*Turn Power Sliding Doors Main Switch OFF When Working on Vehicle:*

*Leaving the power sliding doors main switch in the ON position while working on the vehicle is dangerous. If the open/close switches are mistakenly pressed, the power sliding doors will slide and hands or head could become caught resulting in possible injury. Always press the power sliding doors main switch to the OFF position when working on the vehicle.*

**NOTE**

- If there is a problem with the power sliding doors and you want to operate them manually, press the power sliding doors main switch to the OFF position and they can be operated manually.
- If the power sliding doors main switch is pressed to the OFF position while the doors are opening/closing electrically, the beep sound will be heard and the sliding door(s) stop. If you press the power sliding doors main switch to the ON position again, the door(s) can be opened/closed electrically.
- When a sliding door is half open and the system is switched to manual operation, the door can be operated manually by first sliding it forward and back, and then in the desired direction.

---

**Liftgate**

**WARNING**

*Open Liftgate and Exhaust Gas:*

*Exhaust gas in the cabin of a vehicle is dangerous. An open liftgate in a moving vehicle will cause exhaust gas to be drawn into the cabin. This gas contains CO (carbon monoxide), which is colorless, odorless, and highly poisonous, and it can cause loss of consciousness and death. Moreover, an open liftgate could cause occupants to fall out in an accident. Do not drive with the liftgate open.*

**Locking, Unlocking with Key**

To lock the liftgate with the key, insert the key and turn it counterclockwise.

To unlock the liftgate with the key, insert the key and turn it clockwise.

The liftgate can be locked/unlocked by inserting the key into the key slot of any door, refer to Power Door Locks (page 3-10).
Locking, Unlocking with Transmitter *

The liftgate can be locked/unlocked by operating the keyless entry system transmitter, refer to Keyless Entry System (page 3-3).

Locking, Unlocking with Door-Lock Switch *

The liftgate can be locked/unlocked by operating the door-lock switch, refer to Power Door Locks (page 3-10).

Opening and Closing the Liftgate

Opening the liftgate

Pull up on the handle.

Closing the liftgate

Use both hands to push the liftgate down until the lock snaps shut. Do not slam it. Pull up on the liftgate to make sure it is securely latched.

Power Windows *

The ignition switch must be in the ON position for the power windows to operate.

WARNING

Closing Power Windows:
Closing power windows are dangerous. A person’s hands, head, or even neck could be caught by the window and result in serious injury or even death. This warning applies especially to children. Make sure the opening is clear before closing a window.

Children and Power Windows:
Leaving the power window switches unlocked while children are in the vehicle is dangerous. Power window switches that are not locked with the power window lock switch would allow children to operate power windows unintentionally which could result in serious injury if a child’s hands, head or neck becomes caught by the window. Always lock all passenger power windows with the power window lock switch on the driver’s side while children are in the vehicle, and never allow children to play with power window switches.

CAUTION

To prevent burning out the fuse and damaging the power window system, don't open or close more than three windows at once.

* Some models.
**Operating the Driver's Side Power Window**

**Manual opening/closing**
To open the window to the desired position, press down the switch. To close the window to the desired position, pull up the switch.

**Auto-opening**
To fully open the window automatically, press the switch completely down.
To stop the window partway, pull up the switch and then release it.

**Operating the Passenger Power Windows**

The power windows may be operated when the power window lock switch on the driver's door is in the unlocked position.

To stop the window partway, pull up the switch and then release it.

**Front passenger-side power window**
To open the window to the desired position, press down the switch. To close the window to the desired position, pull up the switch.
Rear power windows

To open a window to the desired position, press the lower part of the switch.
To close a window to the desired position, press the upper part of the switch.

Power Window Lock Switch

With the lock switch in the unlocked position, all power windows on each door can be operated.

With the lock switch in the locked position, only the driver's side power window can be operated.

WARNING

Unintentional Window Operation:
Unintentional power window operation is dangerous. A person’s hands, head, or neck could be caught by the window and result in serious injury. Unless a passenger needs to operate a power window, keep the power window lock switch in the locked position.
**Rear Quarter Windows**

Open or close a swing-out rear quarter window by releasing the latch and moving the window.

**NOTE**

When parked in public areas, it is best to keep the rear quarter windows closed for security.

**Opening a Window**

Pull the latch inward and then push the window outward.

**Closing a Window**

Pull the latch inward and then push it backward until it snaps shut. Make sure the window is securely closed.
Fuel-Filler Lid and Cap

⚠️ WARNING

Fuel Spray:
Fuel spray is dangerous. Fuel can burn skin and eyes and cause illness if ingested. Fuel spray is released when there is pressure in the fuel tank and the fuel cap is removed too quickly. When removing the fuel cap, loosen the cap slightly and wait for any hissing to stop. Then remove it.

Fuel Vapor:
Fuel vapor is dangerous. It could be ignited by sparks or flames causing serious burns and injuries. Before refueling, stop the engine, and always keep sparks and flames away from the filler neck. Additionally, use of the incorrect fuel filler cap or not using a fuel filler cap may result in fuel leak, which could result in serious burns or death in an accident.

⚠️ CAUTION

Always use only a genuine Mazda fuel cap or an approved equivalent, available at an Authorized Mazda Dealer. The wrong cap can result in a serious malfunction of the fuel and emission control systems. It may also cause the check engine light in the instrument cluster to illuminate.

Fuel-Filler Lid

To open, pull up the remote fuel-filler lid release.

![Remote fuel-filler lid release]

NOTE

The fuel-filler lid cannot be opened when the left-side sliding door is open. Close the sliding door to open the fuel-filler lid.

Fuel-Filler Cap

To remove the filler cap, turn it counterclockwise.

To close the filler cap, turn it clockwise until it clicks.
Know Your Mazda
Doors and Locks

⚠️ CAUTION

Make sure the fuel-filler cap is tightened securely. The check engine light may illuminate when the cap isn't tightened securely. If the light remains on (even after you have tightened the cap securely, driven, and restarted the engine several times), it may indicate a different problem. Contact an Authorized Mazda Dealer as soon as possible.

⚠️ WARNING

Closed and Securely Locked Hood:
A hood that is not closed and securely locked is dangerous as it could fly open while the vehicle is moving and block the driver's vision which could result in a serious accident. Always check that the hood is closed and securely locked.

▼ Opening the Hood

1. With the vehicle parked, pull the release handle to unlock the hood.

2. Pull the hood latch up and lift the hood.
3. Use the support rod to hold the hood open.

\[\text{Support rod} \]

\[\text{Clip} \]

\[\text{Closing the Hood} \]

1. Check under the hood area to make certain all filler caps are in place and all loose items (e.g. tools, oil containers, etc.) have been removed.

2. Insert the support rod in its clip while holding up the hood. Verify that the support rod is secured in the clip before closing the hood.

3. Close the hood so that it locks securely.

\[\text{Moonroof*} \]

The moonroof can be opened or closed electrically only when the ignition switch is in the ON position.

\[\text{Slide switch} \]

\[\text{Tilt switch} \]

\[\text{WARNING} \]

\[\text{Extending the Head or Arms Through the Moonroof:} \]

\[\text{Extending the head, arms, or other parts of the body through the moonroof is dangerous. The head or arms could hit something while the vehicle is moving. This could cause serious injury or death. Don't let passengers stand up or extend anything through the open moonroof while the vehicle is moving.} \]

\[\text{Closing the Moonroof:} \]

\[\text{A closing moonroof is dangerous. The hands, head, or even neck of a person — especially a child — could be caught in it as it closes, causing serious injury or even death. Make sure the opening is clear before closing the moonroof.} \]

*Some models.*
NOTE
After washing your Mazda or after a rain, wipe the water off the moonroof before operating it to avoid water penetration which could cause rust and water damage to your headliner.

▼ Tilt Operation
The rear of the moonroof can be tilted open to provide more ventilation.

To tilt, push the rear of the tilt switch.

To close, push the front of the tilt switch.

▼ Slide Operation
To open to any position, press the rear of the slide switch.

To close, press the front of the slide switch.

NOTE
For safety reasons, the moonroof stops moving approximately 20 cm (8 in) prior to completely closing. After you are sure it is unobstructed, resume closing the moonroof by pressing the switch again.
\textbf{\textless{}Sunshade\textgreater{}}

The sunshade can be opened and closed by hand.

The sunshade opens automatically when the moonroof is opened, but must be closed by hand.

\begin{center}
\textbf{\textless CAUTION\textgreater}

The sunshade doesn't tilt. To avoid damaging the sunshade, don't push up on it.
\end{center}
Immobilizer System

The immobilizer system allows the engine to start only with a key the system recognizes.

If someone attempts to start the engine with an unrecognized key, the engine will not start, thereby helping to prevent the theft of your vehicle.

CAUTION

- Radio equipment like this is governed by laws in the United States. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
- To avoid damage to the key, do not:
  - Drop the key.
  - Get the key wet.
  - Expose the key to any kind of magnetic field.
  - Expose the key to high temperatures on places such as the dashboard or hood, under direct sunlight.

CAUTION

When starting the engine do not allow the following, as the engine may not start due to the electronic signal from the ignition key not being transmitted correctly.

- A key ring rests on the key grip.
- Metal parts of other keys or metal objects touch the key grip.
- Spare keys or keys for other vehicles equipped with an immobilizer system touch or come near the key grip.
- Devices for electronic purchases, or security passage touch or come near the key.

*Some models.
NOTE

- (U.S.A.)
  This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

- (CANADA)
  This device complies with RSS-210 of Industry CANADA. Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

\[\text{▼ Immobilizer System Warning Light}\]

If the immobilizer system is working properly, the light will come on when the ignition switch is turned to the ON or START position. The light will go out when confirmation by the immobilizer system is completed.

If the light flashes rapidly, fails to come on, or comes on and stays on, it indicates a system malfunction. If any of these occur, contact an Authorized Mazda Dealer as soon as possible.

NOTE

- If the warning light comes on and stays on when the ignition switch is turned to the ON position, the engine will not start.

- Signals from a TV or radio station, or from a transceiver or a mobile telephone, could interfere with your immobilizer system. If you are using the proper key and your engine fails to start, check the warning light. If it is flashing, remove the ignition key and wait 2 seconds or more, then reinsert it and try starting the engine again. If it doesn't start after 3 or more tries, contact an Authorized Mazda Dealer.

- If the warning light flashes continuously while you are driving, don't shut off the engine. Go to an Authorized Mazda Dealer and have it checked. If you shut off the engine while the light is flashing you won't be able to restart it.

- Since the electronic codes are reset when repairing the immobilizer system, the keys are needed. Bring all the existing keys to an Authorized Mazda Dealer.
**Maintenance**

If you have a problem with the immobilizer system or the key, consult an Authorized Mazda Dealer.

**NOTE**

- The keys carry a unique electronic code. For this reason, and to assure your safety, obtaining replacement key requires some waiting time. They are only available through an Authorized Mazda Dealer.
- Always keep a spare key, in case one is lost. If a key is lost, contact an Authorized Mazda Dealer as soon as possible.
- If you lose a key, an Authorized Mazda Dealer will reset the electronic codes of your remaining keys and immobilizer system. Bring all the remaining keys to an Authorized Mazda Dealer to reset. Starting the vehicle with a key that has not been reset is not possible.

**Modification and Add-On Equipment**

Mazda cannot guarantee the immobilizer system's operation if the system has been modified or if any add-on equipment has been installed to it.

**CAUTION**

To avoid damage to your vehicle, do not modify the system or install any add-on equipment to the immobilizer system or the vehicle.

**Theft-Deterrent System**

The theft-deterrent system is designed to prevent your vehicle or its contents from being stolen when all doors, hood, and liftgate are locked.

If forcible entry is attempted, the system sounds the horn and flashes the hazard warning lights.

**NOTE**

- The theft-deterrent system operates with the key or the keyless entry system transmitter.
- The system will not function unless it is properly armed. To properly secure the vehicle, always make sure all windows are completely closed and all doors and the liftgate are locked before leaving the vehicle. Make sure the security indicator light is flashing. Remember to take your key and transmitter.

**Operation**

**System triggering conditions**

The horn sounds intermittently and the hazard warning lights flash for about 3 minutes when the system is triggered by any one of the following:

- Forcing open a door, the hood or the liftgate.
- Opening a door or the hood by operating an inside door-lock knob or the hood release handle.

If the system is triggered again, the lights and horn will activate until a door or the liftgate is unlocked with the key or with the transmitter.
How to Arm the System

1. Remove the key from the ignition switch.

2. Make sure the hood is closed. Close and lock all doors and the liftgate from the outside using the key. If you have the keyless entry system, press the lock button on the transmitter. The hazard warning lights will flash once to indicate that the system is armed.

The following method will also arm the theft-deterrent system:
Close the hood and the liftgate. Press the area on the door-lock switch marked “LOCK” once. Close all doors.

3. The indicator light flashes once every 3 seconds to indicate that the system is fully armed. It continues to flash until the theft-deterrent system is turned off.

To Turn off an Armed System

An armed system can be turned off by any one of the following methods:
- Unlock a door or the liftgate with the key.
- Press the unlock button on the keyless entry system transmitter.
- Insert the key into the ignition switch and turn it to the ON position.

The hazard warning lights will flash twice to indicate that the system is turned off.

To Stop an Alarm

A triggered alarm can be turned off by any one of the following methods:
- Unlock a door or the liftgate with the key.
- Press the unlock button on the keyless entry system transmitter.

If you have any problem with the theft-deterrent system, consult an Authorized Mazda Dealer.

Theft-Deterrent Labels

A label indicating that your vehicle is equipped with a Theft-Deterrent System is in the glove box.

Mazda recommends that you affix it to the lower rear corner of a front door window.
Steering Wheel and Mirrors

### Steering Wheel

**WARNING**

*Adjusting the Steering Wheel:*
Adjusting the steering wheel while the vehicle is moving is dangerous. Moving it can very easily cause the driver to abruptly turn to the left or right. This can lead to loss of control or an accident. Never adjust the steering wheel while the vehicle is moving.

**Tilt Steering Wheel**

To change the angle of the steering wheel, stop the vehicle, pull the tilt wheel release lever under the steering column down, adjust the wheel, then push the release lever up to lock the column.

After adjusting, push the wheel up and down to be certain it's locked before driving.

### Mirrors

**Outside Mirrors**

Check the mirror angles before driving.

**Mirror type**

- **Flat type (driver's side)**
  Flat surface mirror.

- **Convex type (front passenger side)**
  The mirror has single curvature on its surface.

**WARNING**

*Convex Mirror:*
Changing lanes without taking into account the actual distance of the vehicle in the convex mirror is dangerous. You could have a serious accident. What you see in the convex mirror is closer than it appears. Be sure to look over your shoulder before changing lanes.

**Power control mirror**

The ignition switch must be in the ACC or ON position.

To adjust:

1. Move the selector switch to the left or right to choose the left or right side mirror.
2. Depress the mirror switch in the appropriate direction.

After adjusting the mirror, lock the control by moving the selector switch to the middle position.

**Manual control mirror**

Adjust by hand.

**Folding the mirror**

Fold the outside mirror rearward until it is flush with the vehicle.

---

**WARNING**

*Driving with Mirrors Folded In:*

Driving with the outside mirrors folded in is dangerous. Your rear view will be restricted, and you could have an accident. Always return the outside mirrors to the driving position before you start driving.

**Mirror defroster**

To turn on the mirror defrosters, turn the ignition switch to the ON position and push the rear window defroster switch (page 5-37).

**Rearview Mirror**

**Rearview mirror adjustment**

Before driving, adjust the rearview mirror to center on the scene through the rear window.

**Reducing glare from headlights**

Do this with the day/night lever in the day position.

*Some models.*
Push the lever forward for day driving. Pull it back to reduce glare from headlights.

### WARNING

**Blocked View:**
Cargo stacked higher than the seatbacks is dangerous. It can block your view in the rearview mirror, which might cause you to hit another car when changing lanes. Don't stack things higher than the seatbacks.
Before Driving Your Mazda

Important information about driving your Mazda.

Fuel and Engine Exhaust Precautions ........................................ 4-2

Towing .................................................................................... 4-12
   Trailer Towing ................................................................. 4-12
**Fuel Requirements**

Vehicles with catalytic converters or oxygen sensors must use ONLY UNLEADED FUEL, which will reduce exhaust emissions and keep spark plug fouling to a minimum.

Your Mazda will perform best with fuel listed in the table.

<table>
<thead>
<tr>
<th>Fuel</th>
<th>Octane Rating (Anti-knock index)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Regular unleaded fuel</td>
<td>87 [(R+M)/2 method] or above (91 RON or above)</td>
</tr>
</tbody>
</table>

* U.S. federal law requires that octane ratings be posted on gasoline station pumps.

Fuel with a rating lower than 87 octane (91 RON) could cause the emission control system to lose effectiveness. It could also cause engine knocking and serious engine damage.

**Ecuador, Venezuela**

Use only premium unleaded fuel: 91 [(R+M)/2 method] or above (96 RON or above)

---

**CAUTION**

- **USE ONLY UNLEADED FUEL.**
  
  Leaded fuel is harmful to the catalytic converter or the oxygen sensor. The lead will accumulate on the oxygen sensor and the catalyst inside the converter. This will result in a malfunction of the emission control system, causing poor performance.

- Your vehicle can only use oxygenated fuels containing no more than 10% ethanol by volume. Damage to your vehicle may occur when ethanol exceeds this recommendation, or if the gasoline contains any methanol. Stop using gasohol of any kind if your vehicle engine is performing poorly.

- Never add fuel system additives. Never add cleaning agents other than those specified by Mazda. Other cleaning agents and additives may damage the system. Consult an Authorized Mazda Dealer.

Gasoline blended with oxygenates such as alcohol or ether compounds are generally referred to as oxygenated fuels. The common gasoline blend that can be used with your vehicle is ethanol blended at no more than 10%. Gasoline containing alcohol, such as ethanol or methanol, may be marketed under the name “Gasohol”.

Vehicle damage and drivability problems resulting from the use of the following may not be covered by the Mazda warranty.

- Gasohol containing more than 10% ethanol.
- Gasoline or gasohol containing methanol.
- Leaded fuel or leaded gasohol.
Emission Control System

Your vehicle is equipped with an emission control system (the catalytic converter is part of this system) that enables your vehicle to comply with existing exhaust emissions requirements.

⚠️ WARNING

Parking Over Flammable Objects:
Parking over or near anything flammable, such as dry grass, is dangerous. Even with the engine turned off, the exhaust system could ignite it because the exhaust system gets very hot during normal use. A resulting fire could cause serious injury or death. Never park over or near anything flammable.

⚠️ CAUTION

Ignoring the following precautions could cause lead to accumulate on the catalyst inside the converter or cause the converter to get very hot. Either condition will damage the converter and cause poor performance.

- USE ONLY UNLEADED FUEL.
- Don't drive your Mazda with any sign of engine malfunction.
- Don't coast with the ignition switch turned off.
- Don't descend steep grades in gear with the ignition switch turned off.
- Don't operate the engine at high idle for more than 5 minutes.
- Don't tamper with the emission control system. All inspections and adjustments must be made by a qualified technician.
- Don't push-start or pull-start your vehicle.

NOTE

Under U.S. federal law, any modification to the original-equipment emission control system before the first sale and registration of a vehicle is subject to penalties. In some states, such modification made on a used vehicle is also subject to penalties.
Before Driving Your Mazda

**Fuel and Engine Exhaust Precautions**

**NOTE**

After driving some distance and turning off the engine, the sound of a valve opening and closing can be heard near the lower left part of the driver's seat or below the driver-side door from the outside, however this does not indicate an abnormality. Your vehicle has a self-checking device and it operates after turning off the engine.
Engine Exhaust (Carbon Monoxide)

**WARNING**

**Carbon Monoxide:**
Engine exhaust gas is dangerous. This gas contains carbon monoxide (CO), which is colorless, odorless, and poisonous. When inhaled, it can cause loss of consciousness and death. If you smell exhaust gas inside your vehicle, keep all windows fully open and contact an Authorized Mazda Dealer immediately.

**Exhaust Gas in Enclosed Area:**
Running the engine inside an enclosed area, such as a garage, is dangerous. Exhaust gas, which contains poisonous carbon monoxide, could easily enter the cabin. Loss of consciousness or even death could occur. Don’t run the engine when inside an enclosed area.

**Idling with the Windows Closed:**
Exhaust gas is dangerous. When your vehicle is stopped with the windows closed and the engine running for a long time even in an open area, exhaust gas, which contains poisonous carbon monoxide, could enter the cabin. Loss of consciousness or even death could occur. Open the windows or adjust the heating or cooling system to draw fresh air.

**Snow Blocking the Exhaust Gas:**
Running the engine when a vehicle is stopped in deep snow is dangerous. The exhaust pipe could be blocked by the snow, allowing exhaust gas to enter the cabin. Because exhaust gas contains poisonous carbon monoxide, anyone in the cabin could be injured or killed. Clear the snow from underneath and around your vehicle, particularly the tail pipe, before starting the engine.
Before Driving Your Mazda

Before Starting the Engine

**Before Getting In**

- Be sure the windows, outside mirrors, and outside lights are clean.
- Inspect inflation pressures and condition of tires.
- Look under the vehicle for any sign of a leak.
- If you plan to back up, make sure nothing is in your way.

**NOTE**

Engine oil, engine coolant, brake fluid, washer fluid, and other fluid levels should be inspected. See Maintenance, Section 8.

**After Getting In**

- Are all doors closed and locked?
- Is the seat adjusted properly?
- Are the inside and outside mirrors adjusted?
- Is everyone's seat belt fastened?
- Check all gauges.
- Check all warning lights when the ignition switch is turned to the ON position.
- Release the parking brake and make sure the parking brake warning light goes off.

Always be thoroughly familiar with your Mazda.
Break-In Period

No special break-in is necessary, but a few precautions in the first 1,000 km (600 miles) may add to the performance, economy, and life of your Mazda.

- Don't race the engine.
- Don't maintain one constant speed, either slow or fast, for a long period of time.
- Don't drive constantly at full-throttle or high engine rpm for extended periods of time.
- Avoid unnecessary hard stops.
- Avoid full-throttle starts.
- Don't tow a trailer.

Money-Saving Suggestions

How you operate your Mazda determines how far it will travel on a tank of fuel. Use these suggestions to help save money on fuel and repairs.

- Avoid long warm-ups. Once the engine runs smoothly, begin driving.
- Avoid fast starts.
- Keep the engine tuned. Follow the maintenance schedule (page 8-3) and have an Authorized Mazda Dealer perform inspections and servicing.
- Use the air conditioner only when necessary.
- Slow down on rough roads.
- Keep the tires properly inflated.
- Don't carry unnecessary weight.
- Don't rest your foot on the brake pedal while driving.
- Keep the wheels in correct alignment.
- Keep windows closed at high speeds.
- Slow down when driving in crosswinds and headwinds.

WARNING

Coasting:

Stopping the engine when going down a hill is dangerous. This causes the loss of power steering and power brake control, and may cause damage to the drivetrain. Any loss of steering or braking control could cause an accident. Never stop the engine when going down a hill.
Hazardous Driving

**WARNING**

*Downshifting on Slippery Surfaces:*
Downshifting into lower gear while driving on slippery surfaces is dangerous. The sudden change in tire speed could cause the tires to skid. This could lead to loss of vehicle control and an accident. If it is necessary to downshift on slippery surfaces, be very careful.

*ABS:*
The ABS cannot compensate for unsafe and reckless driving, excessive speed, tailgating (following another vehicle too closely), driving on ice and snow, and hydroplaning (reduced tire friction and road contact because of water on the road surface). You can still have an accident. So don't rely on ABS as a substitute for safe driving.

When driving on ice or in water, snow, mud, sand, or similar hazard:

- Be cautious and allow extra distance for braking.
- Avoid sudden braking and quick steering.
- If your vehicle is not equipped with ABS, brake with the pedal by using a light up-down motion. Don't hold the pedal down constantly.
- If your vehicle is equipped with ABS, don't pump the brakes. Continue to press down on the brake pedal.
- If you get stuck, select a lower gear and accelerate slowly. Don't spin the front wheels.

For more traction in starting on slippery surfaces such as ice or packed snow, use sand, rock salt, chains, carpeting, or other nonslip material under the front wheels.

**NOTE**

Use snow chains only on the front wheels.
Rocking the Vehicle

⚠️ WARNING

Spinning the Wheels:
When the vehicle is stuck, spinning the wheels at high speed is dangerous. The spinning tire could overheat and explode. This could cause serious injuries. Don’t spin the wheels at more than 56 km/h (35 mph), and don’t allow anyone to stand behind a wheel when pushing the vehicle.

⚠️ CAUTION

Too much rocking may cause engine overheating, transaxle failure, and tire damage.

If you must rock the vehicle to free it from snow, sand or mud, depress the accelerator slightly and slowly move the shift lever from D to R.

Winter Driving

- Carry emergency gear, including tire chains, window scraper, flares, a small shovel, jumper cables, and a small bag of sand or salt.

Ask an Authorized Mazda Dealer to perform the following precautions:

- Have the proper ratio of antifreeze in the radiator. Refer to Engine Coolant on page 8-14.
- Inspect the battery and its cables. Cold reduces battery capacity.
- Inspect the ignition system for damage and loose connections.
- Use washer fluid made with antifreeze—but don’t use engine coolant antifreeze for washer fluid (page 8-20).
- Don’t use the parking brake in freezing weather as the parking brake may freeze. Instead, shift to P and block the rear wheels.

Snow Tires

Use snow tires on all four wheels

Don’t go faster than 120 km/h (75 mph) while driving with snow tires. Inflate snow tires 30 kPa (0.3 kgf/cm², 4.3 psi) more than recommended on the tire pressure label (driver’s door), but never more than the maximum cold-tire pressure shown on the tires.

Your vehicle is originally equipped with all season radials designed to be used all year around. In some extreme climates you may find it necessary to replace them with snow tires during the winter months to further improve traction on snow and ice covered roads.
Before Driving Your Mazda

Driving Tips

⚠️ WARNING

Mixing Tire Types:
Using tires different in size or type is dangerous. Your vehicle's handling could be greatly affected and result in an accident. Use only the same size and type tires (snow, radial, or non-radial) on all four wheels.

⚠️ CAUTION

Check local regulations before using studded tires.

▼ Tire Chains
Check local regulations before using tire chains.

⚠️ CAUTION

- Chains may scratch or chip aluminum wheels. Install tire chains on steel wheels only.
- Chains may affect handling.
- Don't go faster than 50 km/h (30 mph) or the chain manufacturer's recommended limit, whichever is lower.
- Drive carefully and avoid bumps, holes, and sharp turns.
- Avoid locked-wheel braking.
- Don't use chains on a temporary spare tire; it may result in damage to the vehicle and to the tire.
- Don't use chains on roads that are free of snow or ice. The tires and chains could be damaged.

Install the chains on the front tires.
Don't use chains on the rear tires.
Use only SAE Class “S” chains, and make sure they fit.

Installing the chains
1. Remove the wheel covers, or the chain bands will scratch them.
2. Secure the chains on the front tires as tightly as possible. Always follow the chain manufacturer's instructions.
3. Retighten the chains after driving 1/2 — 1 km (1/4 — 1/2 mile).
Driving In Flooded Area

⚠️ WARNING

*Driving with Wet Brakes:*
Driving with wet brakes is dangerous. Increased stopping distance or the vehicle pulling to one side when braking could result in a serious accident. Light braking will indicate whether the brakes have been affected. Dry the brakes by driving very slowly and applying the brakes lightly until brake performance returns to normal.

⚠️ CAUTION

Make sure water does not enter the vehicle interior or the engine area. Interior materials could get moldy, and many electronic devices in the cabin and the engine could be damaged.

Overloading

⚠️ WARNING

*Vehicle Load Weight:*
The gross axle weight rating (GAWR) and the gross vehicle weight rating (GVWR) of your vehicle are on the Motor Vehicle Safety Standard Label on the driver's door frame. Exceeding these ratings can cause an accident or vehicle damage. You can estimate the weight of your load by weighing the items (or people) before putting them in the vehicle. Be careful not to overload your vehicle.
Before Driving Your Mazda

**Towing**

---

**Trailer Towing**

Your Mazda was designed and built primarily to carry passengers and cargo. If you must tow a trailer, follow these instructions because driver and passenger safety depends on proper equipment and safe driving habits. Towing a trailer will affect handling, braking, durability, performance, and economy. Never overload vehicle or trailer. Consult an Authorized Mazda Dealer if you need further details.

---

⚠️ **CAUTION**

Don't tow a trailer during the first 1,000 km (600 miles) of your new Mazda. If you do, you may damage the engine, transaxle, differential, wheel bearings, and other power train components.

---

▼ **Weight Limits**

**TTW and GCWR**

The total trailer weight (TTW), gross combined weight rating (GCWR), gross axle weight rating (GAWR), trailer load, and trailer tongue load must be within the prescribed limits.

- The total trailer weight (TTW) is the sum of the weights of the trailer load (trailer weight plus cargo), trailer hitch, vehicle passengers, and vehicle load. Never allow the total trailer weight (TTW) to exceed specifications in the Trailer Towing-Load Table.

- The maximum GCWR is the combined weight of the trailer and load plus the towing vehicle (including trailer hitch, vehicle passengers, and load). It must not exceed specifications in the load table.

**GAWR and GVWR**

Don't exceed front and rear GAWR (gross axle weight rating) and GVWR (gross vehicle weight rating). If you do, vehicle handling, braking, and performance will be affected. These values are also on the Motor Vehicle Safety Certification Label posted on the driver's door.

**High-altitude operation**

In a high-altitude operating environment, a gasoline engine loses power at a rate of 3% to 4% per 304 m (1,000 ft) of elevation. In these conditions, a reduction in gross vehicle weight and gross combined weight is recommended.
TRAILER TOWING-LOAD TABLE

Because vehicle weights vary, adjustments must be made to meet the requirements in this table.

<table>
<thead>
<tr>
<th>Item</th>
<th>Model</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>With 4-Seasons Package</td>
</tr>
<tr>
<td>MAX. FRONTAL AREA</td>
<td>2.97 m² (32 ft²)</td>
</tr>
<tr>
<td>MAX. TTW</td>
<td>Add trailer's weight, load and hitch; vehicle passengers and vehicle load*</td>
</tr>
<tr>
<td></td>
<td>* i.e. baggage, food, camp gear</td>
</tr>
<tr>
<td>MAX. GCWR</td>
<td>3,324 kg (7,328 lb)</td>
</tr>
<tr>
<td>MAX. GAWR</td>
<td>Front</td>
</tr>
<tr>
<td></td>
<td>Rear</td>
</tr>
<tr>
<td>MAX. GVWR</td>
<td>2,386 kg (5,260 lb)</td>
</tr>
<tr>
<td>TRAILER-TONGUE LOAD</td>
<td>Tongue load</td>
</tr>
<tr>
<td>DISTRIBUTION OF TRAILER LOAD</td>
<td>Front</td>
</tr>
<tr>
<td></td>
<td>Rear</td>
</tr>
</tbody>
</table>

The optional 4-Seasons Package: Including among others, automatic transaxle oil cooler. Vehicles with the 4-Seasons Package can tow a heavier trailer and carry more cargo weight than standard-equipped vehicles.

GCWR: Gross Combined Weight Rating (sum of TTW, vehicle weights and 2 passengers)
GAWR: Gross Axle Weight Rating
GVWR: Gross Vehicle Weight Rating
WARNING

**Tow Loads:**
Attempting to tow loads greater than those specified is dangerous as it may cause serious handling and performance problems that could result in personal injury or vehicle damage, or both. Always keep tow loads within specified limits in the Trailer Towing-Load Table.

**Trailer Loading:**
Loading the trailer with more weight in the rear than in the front is dangerous. Doing so could cause you to lose control. The trailer tongue load must be 10%—15% of the total trailer load (sum of the weights of the trailer and cargo). Try to load the trailer with the weight about 60% toward the front and 40% toward the rear.

**Determining Total Trailer Weight and Tongue Load:**
Attempting to tow loads without determining the total trailer weight and tongue load is dangerous. Trailer sway from crosswinds, rough roads or other causes could result in loss of control and a serious accident. Always have the total trailer weight and tongue load determined prior to departure.

CAUTION

The total trailer weight and tongue load can be determined by weighing the trailer on platform scales at a highway weight station or a trucking company.

**Trailer Hitch**

Use only a hitch ball recommended by the trailer manufacturer that conforms to the gross trailer weight requirement.
When not towing a trailer, remove the trailer hitch (if detachable) to reduce the possibility of damage as a result of the vehicle being rear-ended.
When the trailer load is more than 907 kg (2,000 lb), use a frame-mounted weight-distributing hitch.
WARNING

Unsecured Hitch:
An unsecured trailer hitch is dangerous as it causes greater trailer sway from crosswinds, rough roads or other causes, resulting in loss of control and a serious accident.
Examine all trailer-hitch mounting bolts regularly and tighten any that are loose. If the hitch is removed, seal any open mounting holes to prevent exhaust, dust, water, dirt and other foreign elements from filtering in, possibly endangering personal safety and damaging your vehicle.
Don't install a hitch that stiffens the bumper as it will reduce the bumper's performance. Always make sure the hitch is securely attached before departure.

Exhaust System Modifications:
Modifying your vehicle exhaust system is dangerous. Exhaust gas entering the vehicle could kill you.
When mounting the trailer hitch, make no modifications to the vehicle exhaust system. Make sure there are no exhaust gas leaks into the passenger compartment if any mounting bolts are connected to the body.

CAUTION

- Make all hitch adjustments with actual loads. Don't load and unload vehicle while adjusting hitch. This action will change the vehicle height.
- Don't use an axle-mounted hitch. This may damage the axle and related parts.

▼ Tires

When towing a trailer, make sure all tires are inflated to the recommended cold-tire pressure, as indicated on the tire pressure chart on the driver's door. Trailer tire size, load rating, and inflation pressures should conform to tire manufacturer specifications.

WARNING

Using a Temporary Spare Tire when Towing:
Using a temporary spare tire on your vehicle when towing a trailer is dangerous as it could result in tire failure, loss of control, and injury to vehicle occupants. Never use a temporary spare when towing.
Towing

▼ Safety Chains
Safety chains must be used as a precautionary measure should the trailer become unintentionally unhitched. They should cross under the trailer tongue and attach to the hitch. Leave enough slack to allow full turns. Consult literature published by your trailer or hitch manufacturer for more details.

⚠️ WARNING

Towing Without Safety Chain:
Towing a trailer without using a safety chain securely attached to both the trailer and the vehicle is dangerous. If damage occurs to the coupling unit or hitch ball, the trailer could wander into another lane and cause a collision. Make sure the safety chain is securely attached to both the trailer and the vehicle prior to departure.

▼ Trailer Lights
Trailer lights must comply with all federal, state, and local regulations. Equip your trailer as required before towing it day or night.

⚠️ CAUTION

Don't connect a trailer lighting system directly to the lighting system of your Mazda. This may damage your vehicle's electrical system and lighting systems. Have a recreational vehicle dealer or trailer rental agency connect the system, and inspect the brake lights and turn signals yourself before each trip.

▼ Trailer Brakes
If the total trailer weight exceeds 450 kg (1,000 lb), trailer brakes are required. If your trailer has brakes, make sure they comply with all federal, state, and local regulations.

⚠️ WARNING

Hydraulic Trailer-Brake System:
Connecting a hydraulic trailer-brake system directly to the vehicle brake system is dangerous and will result in inadequate braking and possible injury. Don't connect a hydraulic trailer-brake system to your vehicle's brake system.
Before Driving Your Mazda

Towing

▼ Trailer Towing Tips

- Verify that your Mazda maintains a near-normal attitude when a loaded or unloaded trailer is connected. Don't drive if it has an abnormal front-up or front-down position. Inspect for incorrect tongue load, worn suspension parts, and trailer overloading.
- Make sure the trailer is properly loaded and the cargo is secure to prevent it from shifting.
- Make sure the mirrors conform to all government regulations. If they do not, install required rear view mirrors appropriate for towing purposes.

The three main causes of vehicle-trailer accidents are driver error, excessive speed, and improper trailer loading.

Before driving

- Have your cooling and braking system checked by an Authorized Mazda Dealer.
- Before starting out, inspect the operation of all vehicle and trailer lights and all vehicle-to-trailer connections. Stop and re-inspect all lights and connections after driving a short distance.

Driving

- Your Mazda will handle differently with a trailer in tow, so practice turning, backing, and stopping in a traffic-free area.
- Take time to get accustomed to the extra weight and length.
- Allow more room between your vehicle and the one in front because braking distance increases with a trailer. For each 16 km/h (10 mph) of speed, allow at least one vehicle and trailer length between your Mazda and the vehicle ahead.
- Avoid jerky starts or sudden acceleration.
- Avoid sudden braking. It may cause loss of control and result in jackknifing, especially so on wet or slippery roads.
- Use the following positions when towing a trailer in hilly terrain or when heavily loaded.
  - OD (overdrive) off
  - Shift lever in D

These positions will allow operating the vehicle without frequent shifting.

Lane changes and turning

Avoid quick lane changes, sudden turns, and tight turns. Slow down before turning to avoid the need of sudden braking.
A turning trailer will make a tighter arc than the tow vehicle. Compensate with turns that are larger than normal.
Before Driving Your Mazda

**Towing**

**Passing**
Plan well ahead to pass other vehicles, and provide plenty of room before changing lanes. Crosswinds from passing vehicles, especially larger ones, and the effects of rough roads will affect handling. If swaying occurs, firmly grip the steering wheel and reduce speed immediately, but gradually. Steer straight ahead. If no extreme correction of steering or braking is made, the combination of less speed and firm steering will result in stability.

**Backing up**
Backing a vehicle with a trailer requires practice and patience. Back slowly, and have a helper outside at the rear of the trailer to reduce the risk of an accident. To turn the trailer, place your hand at the bottom of the steering wheel and turn it in the direction you want the trailer to go. Make only slight movements to prevent sharp or prolonged turning.

**Ascending a hill**
Shift into a lower gear to reduce the possibility of overloading or overheating the engine, or both.

**Descending a hill**
Shift into a lower gear and use engine compression as a braking effect.

---

**WARNING**

*Over Use of the Brake Pedal:*
*Holding the brake pedal down too long or too frequently is dangerous as it could cause the brakes to overheat and lose power, resulting in loss of control and a serious accident. Use lower gears (1st and 2nd) to help reduce speed. Pull off the road and allow brakes to cool down whenever braking performance feels reduced. Always use lower gears to reduce speed.*

**Overheated engine**
The extra weight of the trailer may strain the engine on hot days and on long or steep upgrades. If the temperature gauge indicates overheating, turn off the air conditioner, drive safely to the side of the road, park off the right-of-way and wait for engine to cool. Refer to Overheating (page 7-16).

**Parking**
Always make sure the tires of the trailer and the tow vehicle are blocked while parked. Apply the parking brake firmly and put the transaxle in P.

---

4-18
Avoid parking on an incline, but if you must, follow these instructions:

1. Depress and hold down the brake pedal.
2. Have a helper put wheel blocks against the downhill side of all vehicle and trailer tires.
3. Then release the brake pedal slowly until the blocks bear the load.
   - If the grade is downhill, turn the steering wheel so that the front of the front tires face the curb.
   - If it is uphill, face the rear of the front tires against the curb.
4. Firmly apply the parking brake.
5. Shift the transaxle into P, and stop the engine.

To restart after parking on an incline:

1. With the transaxle in P, start the engine. (Be sure to depress and hold the brake pedal.)
2. Shift into gear.
3. Release the parking brake (also the foot brake) and pull away from the wheel blocks. Stop; apply the parking brake and shift into P.
4. Have a helper retrieve the wheel blocks.

Fuel consumption

Trailer towing causes higher fuel consumption.

Maintenance

If you tow a trailer frequently, have your vehicle serviced as shown in Scheduled Maintenance (page 8-3).

* Some models. 5-1
Driving Your Mazda

Starting and Driving

**Ignition Switch**

**▼ Ignition Switch Positions**

**LOCK**
The steering wheel locks to protect against theft. Only in this position can the key be removed.

**WARNING**

*Removing the Key:*
*It's dangerous to remove the key from the ignition switch while the vehicle is moving. Removing the key allows the steering wheel to lock. You will lose steering control and a serious accident could occur. Remove the key only when the vehicle is parked.*

*Not Setting the Parking Brake:*
*Leaving the driver's seat without setting the parking brake is dangerous. Unexpected vehicle movement could occur if the parking brake is not set. This could cause an accident. Before leaving the driver's seat, always set the parking brake and make sure the shift lever is in P.*

**NOTE**
*If turning the key is difficult, jiggle the steering wheel from side to side.*

**ACC (Accessory)**
The steering wheel unlocks and some electrical accessories will operate.

**ON**
This is the normal running position after the engine is started. The warning lights (except brakes) should be inspected before the engine is started (page 5-24).

**NOTE**
*When the ignition switch is turned to the ON position, the sound of the fuel pump motor operating near the fuel tank can be heard. This does not indicate an abnormality.*

**START**
The engine is started in this position. It will crank until you release the key; then it returns to the ON position. The brake warning light can be checked after the engine is started (page 5-24).

**▼ Ignition Key Reminder**
If the ignition switch is in the LOCK or ACC position with the key inserted, a continuous beep sound will be heard when the driver's door is opened.
Starting the Engine

NOTE

Engine-starting is controlled by the spark ignition system. This system meets all Canadian Interference-Causing Equipment Standard requirements regulating the impulse electrical field strength of radio noise.

1. Occupants should fasten their seat belts.
2. Make sure the parking brake is on.
3. Depress the brake pedal.
4. Put the vehicle in park (P). If you must restart the engine while the vehicle is moving, shift into neutral (N).

NOTE

The starter will not operate if the shift lever is not in P or N.

5. Turn the ignition switch to the START position and hold (up to 10 seconds at a time) until the engine starts.

CAUTION

Don’t try the starter for more than 10 seconds at a time. If the engine stalls or fails to start, wait 10 seconds before trying again. Otherwise, you may damage the starter and drain the battery.

6. After starting the engine, let it idle for about 10 seconds.
Brake System

Foot Brake

Your Mazda has power-assisted brakes that adjust automatically through normal use.

Should power-assist fail, you can stop by applying greater force than normal to the brake pedal. But the distance required to stop will be greater than usual.

WARNING

Coasting with the Engine Off:
Continuing to coast when the engine is stalled or turned off is dangerous. Braking will require more effort, and the brake's power-assist could be depleted if you pump the brake. This will cause longer stopping distances or even an accident. Don't continue coasting when the engine is stalled or turned off, find a safe place to stop.

Riding the Brakes:
Driving with your foot continuously on the brake pedal or steadily applying the brakes for long distances is dangerous. This causes overheated brakes, resulting in longer stopping distances or even total brake failure. This could cause loss of vehicle control and a serious accident. Avoid continuous application of the brakes. Shift to a lower gear when going down steep hills.

Parking Brake

WARNING

Not Setting the Parking Brake:
Leaving the driver's seat without setting the parking brake is dangerous. Unexpected vehicle movement could occur if the parking brake is not set. This could cause an accident. Before leaving the driver's seat, always set the parking brake and make sure the shift lever is in P.

CAUTION

Driving with the parking brake on will cause excessive wear of the brake linings or pads.

NOTE

For parking in snow, refer to Winter Driving (page 4-9) regarding parking brake use.
Setting the parking brake
Depress the brake pedal and then firmly pull the parking brake lever fully upwards with a greater amount of force than is required so that the vehicle holds in the stationary position.

Releasing the parking brake
Depress the brake pedal and pull the parking brake lever upwards, then press the release button. While holding the button, lower the parking brake lever all the way down to the released position.

Brake System Warning Light
This warning has the following functions:

Parking brake warning
The light comes on when the parking brake is applied with the ignition switch in the START or ON position. It goes off when the parking brake is fully released.

Low brake fluid level warning
If the light stays on after the parking brake is fully released, you may have a brake problem.

Drive to the side of the road and park off the right-of-way.

You may notice that the pedal is harder to push or that it may go closer to the floor. In either case, it will take longer to stop the vehicle.

1. With the engine stopped, check the brake fluid level immediately and add fluid as required (page 8-17).
2. After adding fluid, check the light again.

If the warning light remains on, or if the brakes do not operate properly, do not drive the vehicle. Have it towed to an Authorized Mazda Dealer.

Even if the light goes out have your brake system inspected as soon as possible by an Authorized Mazda Dealer.
Driving Your Mazda

Starting and Driving

NOTE
Having to add brake fluid is sometimes an indicator of leakage. Consult an Authorized Mazda Dealer as soon as possible even if the brake light is no longer illuminated.

⚠️ WARNING

Brake Warning Light:
Driving with the brake system warning light on is dangerous. It indicates that your brakes may not work at all or that they could completely fail at any time. If this light remains on, after checking that the parking brake is fully released, have the brakes inspected immediately. Don’t drive with this light on, have the vehicle towed to an Authorized Mazda Dealer to have the brakes inspected as soon as possible.

Anti-Lock Brake System (ABS)*

The ABS control unit continuously monitors the speed of each wheel. If one is about to lock up, the ABS responds by automatically releasing and reapplying that wheel's brake.

The driver will feel a slight vibration in the brake pedal and may hear a chattering noise from the brake system. This is normal when the ABS operates. Don't pump the brakes, continue to press down on the brake pedal.

ABS Warning Light*

The warning light stays on for a few seconds when the ignition switch is turned to the ON position.

ABS:
The ABS cannot compensate for unsafe and reckless driving, excessive speed, tailgating (following another vehicle too closely), driving on ice and snow, and hydroplaning (reduced tire friction and road contact because of water on the road surface). You can still have an accident. So don’t rely on ABS as a substitute for safe driving.

NOTE
Braking distances may be longer on loose surfaces (snow or gravel, for example) which usually have a hard foundation. A vehicle with a normal braking system may require less distance to stop under these conditions because the tires will build up a wedge of surface layer when the wheels skid.

*Some models.
If the ABS warning light stays on while you're driving, the ABS control unit has detected a system malfunction. If this occurs, your brakes will function normally as if the vehicle had no ABS. Should this happen, consult an Authorized Mazda Dealer as soon as possible.

**NOTE**

- When the engine is jump-started to charge the battery, uneven rpm occurs and the ABS warning light comes on. This is due to a weak battery, not a malfunction. Recharge the battery.
- When the ABS warning light remains illuminated, the power sliding doors cannot be opened electrically. Refer to “Power Sliding Doors” (page 3-12).

**Electronic Brake Force Distribution System Warning**

If the electronic brake force distribution control unit determines that some components are operating incorrectly, the control unit may turn the brake system warning light and the ABS warning light on at the same time. The problem is likely to be an electronic brake force distribution system.

**Brake Pad Wear Indicator**

When the disc brake pads become worn, the built-in wear indicators contact the disc plates. This causes a screeching noise to warn that the pads should be replaced.

When you hear this noise, consult an Authorized Mazda Dealer as soon as possible.

*Some models.*
Driving Your Mazda

Starting and Driving

⚠️ WARNING

Driving with Worn Disc Pads:
Driving with worn disc pads is dangerous. The brakes could fail and cause a serious accident. As soon as you hear a screeching noise consult an Authorized Mazda Dealer.
Automatic Transaxle Controls

Various Lockouts:

- Indicates that you must depress the brake pedal and pull the shift lever toward you to shift (The ignition switch must be in the ACC or ON position).
- Indicates the shift lever can be shifted freely into any position.
- Indicates that you must pull the shift lever toward you to shift.

\begin{itemize}
  \item [\textbf{P} (Park)] P locks the transaxle and prevents the front wheels from rotating.
\end{itemize}

\textbf{WARNING}

\textit{Holding the Vehicle with P:}

\textit{Only setting the shift lever to the P position without using the parking brake to hold the vehicle is dangerous. If P fails to hold, the vehicle could move and cause an accident. To hold the vehicle, set the shift lever to P AND set the parking brake.}
Driving Your Mazda

Starting and Driving

⚠️ CAUTION

- Shifting into P, N or R while the vehicle is moving can damage your transaxle.
- Shifting into a driving gear or reverse when the engine is running faster than idle can damage the transaxle.

R (Reverse)

In position R, the vehicle moves only backward. You must be at a complete stop before shifting to or from R, except under rare circumstances as explained in Rocking the Vehicle (page 4-9).

N (Neutral)

In N, the wheels and transaxle are not locked. The vehicle will roll freely even on the slightest incline unless the parking brake or brakes are on.

⚠️ WARNING

Shifting from N or P:
It's dangerous to shift from N or P into a driving gear when the engine is running faster than idle. If this is done, the vehicle could move suddenly, causing an accident or serious injury. If the engine is running faster than idle, don’t shift from N or P into a driving gear.

Shifting into N while Driving:
Shifting into N while driving is dangerous. Engine braking cannot be applied when decelerating which could lead to an accident or serious injury. Do not shift into N when driving the vehicle.

⚠️ CAUTION

Do not shift into N when driving the vehicle. Doing so can cause transaxle damage.

D (Drive)

D is the normal driving position. From a stop, the transaxle will automatically shift through a 5-gear sequence.

3 (Third)

The 3 position is helpful when driving in heavy, slow-moving traffic and climbing hills, for engine braking assist when going down hills, or for starting on slick surfaces and other situations where gentle acceleration may be necessary. Do not exceed 141 km/h (87 mph) in the 3 position.

2 (Second)

Use the 2 position for maximum power in hard-pulling situations, or for climbing and descending very steep grades. Do not exceed 93 km/h (57 mph) in the 2 position.

⚠️ WARNING

Sudden Engine-Braking:
Shifting down while driving on wet, snowy, or frozen roads, or while driving at high speeds causes sudden engine braking, which is dangerous. The sudden change in tire speed could cause the tires to skid. This could lead to loss of vehicle control and an accident. Do not use sudden engine braking on slippery road surfaces or at high speeds.
**Shift-Lock System**

The shift-lock system prevents shifting out of P unless the brake pedal is depressed.

To shift from P:
1. Depress and hold the brake pedal.
2. Start the engine.
3. Move the shift lever.

**NOTE**
- When the ignition switch is in the LOCK position, the shift lever cannot be shifted from P.
- If the brake is pumped with the shift lever in P, a chattering near the shift lever may be heard. This does not indicate an abnormality.
- To be sure the vehicle is in park, the **ignition key cannot be removed unless the shift lever is in P**.

**Shift-Lock Override**

If the shift lever won't move from P using the proper shift procedure, continue to hold down the pedal.

1. Remove the shift-lock override cover with a screwdriver or similar tool.

2. Push the shift-lock override button down.

3. Move the shift lever.

4. Take the vehicle to an Authorized Mazda Dealer to have the system checked.

**Overdrive**

**Overdrive operation**

In D, the transaxle automatically shifts to overdrive, which improves fuel economy and reduces noise.

To allow engine braking when going down a steep grade, make sure the overdrive button is in the off position.
Driving Your Mazda

Starting and Driving

And for a smoother ride with less shifting, don't use it when:

- Going up a steep grade.
- Driving in stop-and-go traffic.
- Pulling heavy loads.

To turn off the overdrive, push the button.
The transaxle will then shift through a 4-gear sequence in D.
Shift patterns without overdrive:
D = 1st, 2nd, 3rd, 4th
3 = 2nd, 3rd
2 = 2nd

To turn it on, push the button again.
Shift patterns with overdrive:
D = 1st, 2nd, 3rd, 4th, 5th
3 = 2nd, 3rd
2 = 2nd

O/D OFF indicator light

This light comes on when the overdrive has been turned off.

▼ Driving Tips

Passing
For extra power when passing another vehicle or climbing steep grades, depress the accelerator fully. The transaxle will shift to a lower gear, depending on vehicle speed.

Climbing steep grades from a stop
To climb a steep grade from a stopped position:
1. Depress the brake pedal.
2. Shift to D or 2, depending on the load weight and grade steepness.
3. Release all the brake pedal while gradually accelerating.

Descending steep grades
When descending a steep grade, shift to 3 or 2, depending on load weight and grade steepness. Descend slowly, using the brakes only occasionally to prevent them from overheating.

CAUTION

If the overdrive-off indicator light flashes, the transaxle has an electrical problem. Continuing to drive your Mazda in this condition could cause damage to your transaxle. Consult an Authorized Mazda Dealer as soon as possible.
Power Steering
Power steering is only operable when the engine is running. If the engine is off or if the power steering system is inoperable, you can still steer, but it requires more physical effort.

If the steering feels rigid during normal driving, consult an Authorized Mazda Dealer.

⚠️ CAUTION
Never hold the steering wheel to the extreme left or right for more than 5 seconds with the engine running. This could damage the power steering system.

Cruise Control*
With cruise control, you can set and automatically maintain any speed of more than about 40 km/h (25 mph).

⚠️ WARNING
Cruise Control Use:
Using cruise control in the following conditions could cause you to lose control of the vehicle:
- Hilly terrain
- Steep inclines
- Heavy or unsteady traffic
- Slippery or winding roads
- Similar restrictions that require inconsistent speed
Don't use cruise control in these situations.

▼ Cruise Main Indicator Light

CRUISE MAIN

This light comes on when the ON/OFF switch is pressed and the cruise control system is activated.

*Some models.
Driving Your Mazda
Starting and Driving

▼ Cruise Set Indicator Light

CRUISE

This light comes on when a cruising speed is set.

▼ Activation/Deactivation

To activate the system, press the ON/OFF switch. The cruise main indicator light illuminates.

To deactivate the system, press the switch again. The cruise main indicator light turns off.

⚠ WARNING

Cruise Main Switch: Leaving the ON/OFF switch on when not using the cruise control is dangerous as it may be switched on accidentally. This could result in loss of vehicle control. Keep the ON/OFF switch off when cruise control is not in use.

▼ To Set Speed

1. Activate the cruise control system by pressing the ON/OFF switch.
2. Accelerate to the desired speed, which must be more than 40 km/h (25 mph).
3. Press the SET/COAST button and release it at the speed you want. Release the accelerator at the same time.

Don’t continue to hold in the button. Until you release it, speed will continue to drop (unless you continue to accelerate) and you’ll miss the desired speed.
NOTE

- The SET function can't be activated until about 2 seconds after the ON/OFF switch has been engaged.
- On a steep grade, the vehicle may momentarily slow down going up or speed up while going down.

To Increase Cruising Speed

Follow either of these procedures.

- Press the RES/ACCEL button and hold it. Your vehicle will accelerate. Release the button at the speed you want.

- Accelerate to the desired speed. Press the SET/COAST button and release it immediately.

NOTE

Accelerate if you want to speed up temporarily when the cruise control is on. Greater speed will not interfere with it or change the set speed. Take your foot off the accelerator to return to the set speed.
To Decrease Cruising Speed
Press the SET/COAST button and hold it. The vehicle will gradually slow. Release the button at the speed you want.

Your vehicle has a tap-down feature that allows you to decrease your current speed in decrements of 1.6 km/h (1 mph) by a momentary tap of the SET/COAST button. Multiple taps will decrease your vehicle speed 1.6 km/h (1 mph) for each tap.

To Resume Cruising Speed at More Than 40 km/h (25 mph)
If some other method besides the ON/OFF switch was used to cancel cruising speed and the system is still activated, the most recent set speed will automatically resume when the RES/ACCEL button is pressed. If vehicle speed is below 40 km/h (25 mph), increase the vehicle speed up to 40 km/h (25 mph) and press the RES/ACCEL button.

To Cancel
To turn off the system, use one of these methods:
- Press the ON/OFF switch.
- Slightly depress the brake pedal.
Driving Your Mazda

Starting and Driving

- Press the CANCEL button.

The system is off when the ignition is off.

**NOTE**

Cruise control will cancel at about 15 km/h (9 mph) below the preset speed or below 40 km/h (25 mph).

---

**Traction Control System (TCS)**

The Traction Control System (TCS) enhances traction and safety by controlling engine torque. When the TCS detects driving wheel slippage, it lowers engine torque to prevent loss of traction.

This means that on a slick surface, the engine adjusts automatically to provide optimum power to the drive wheels without causing them to spin and lose traction.

---

**WARNING**

**TCS and Unsafe Driving:**
The traction control system (TCS) cannot compensate for unsafe and reckless driving, excessive speed, tailgating (following another vehicle too closely), and hydroplaning (reduced tire friction and road contact because of water on the road surface). You can still have an accident. So don't rely on the traction control system as a substitute for safe driving.

**TCS and Snow and Ice:**
Driving without proper traction devices on snow and/or ice-covered roads is dangerous. The traction control system (TCS) alone cannot provide adequate traction and you could still have an accident. Use snow tires or tire chains and drive at reduced speeds when roads are covered with ice and/or snow.

---

*Some models.* 5-17
Starting and Driving

▼TCS Indicator Light

This indicator light stays on for a few seconds when the ignition switch is turned to the ON position. If the TCS is operating, the indicator light flashes.

If the light stays on, the TCS may have a malfunction and it may not operate correctly. Take your vehicle to an Authorized Mazda Dealer.

**NOTE**

- In addition to the indicator light flashing, a slight lugging sound will come from the engine. This indicates that the TCS is operating properly.
- On slippery surfaces, such as fresh snow, it will be impossible to achieve high rpm when the TCS is on.

▼TCS OFF Indicator Light

This light comes on when the ignition switch is turned to the ON position. It goes off when the engine is started. It also comes on when you switch off the traction control system or when the system has a malfunction.

**NOTE**

After starting the engine on very cold days, the TCS OFF indicator will remain on and TCS will not operate until the engine is warm.

▼TCS OFF Switch

Press the TCS OFF switch to turn off the TCS. The TCS OFF indicator light will illuminate.

Press the switch again to turn the TCS back on. The TCS OFF indicator light will go out.
NOTE

- When TCS is on and you attempt to free the vehicle when it is stuck, or drive it out of freshly fallen snow, the TCS will activate. Depressing the accelerator will not increase engine power and freeing the vehicle may be difficult. When this happens, turn off the TCS.

- If the TCS is off when the engine is turned off, it automatically activates when the ignition switch is turned on.

- Leaving the TCS on will provide the best traction.
Driving Your Mazda

Instrument Cluster and Indicators

Meters and Gauges

1. Speedometer ................................................................. page 5-21
2. Odometer, Trip Meter and Selector ................................ page 5-21
3. Tachometer ................................................................. page 5-22
4. Engine Coolant Temperature Gauge ............................. page 5-22
5. Fuel Gauge ................................................................. page 5-23
\section*{Speedometer}

The speedometer indicates the speed of the vehicle.

\section*{Odometer, Trip Meter and Selector}

The display mode can be changed from odometer to trip meter A to trip meter B and then back to odometer by pressing the selector while one of them is displayed. The selected mode will be displayed.

\begin{itemize}
  \item Displays for 10 minutes after the ignition switch is turned to the LOCK position from the ACC or ON position.
  \item Displays for 10 minutes after any door is opened.
\end{itemize}

\section*{Odometer}

When this mode is selected, ODO will be displayed. The odometer records the total distance the vehicle has been driven.

\section*{Trip meter}

The trip meter can record the total distance of two trips. One is recorded in trip meter A, and the other is recorded in trip meter B.

For instance, trip meter A can record the distance from the point of origin, and trip meter B can record the distance from where the fuel tank is filled.

When trip meter A is selected, pressing the selector again within one second will change to trip meter B mode.

When trip meter A is selected, TRIP A will be displayed. When trip meter B is selected, TRIP B will be displayed.
The trip meter records the total distance the vehicle is driven until the meter is again reset. Return it to “0.0” by holding the selector depressed for more than 1 second. Use this meter to measure trip distances and to compute fuel consumption.

**NOTE**

- Only the trip meters record tenths of kilometers (miles).
- The trip record will be erased when the vehicle is driven over 999.9 km (mile).

**Tachometer**

The tachometer shows engine speed in thousands of revolutions per minute (rpm).

![Tachometer](image)

**CAUTION**

Don't run the engine with the tachometer needle in the RED ZONE. This may cause severe engine damage.

**Engine Coolant Temperature Gauge**

The engine coolant temperature gauge shows the temperature of the engine coolant.

If the needle is near H, it indicates overheating.

![Engine Coolant Temperature Gauge](image)

**CAUTION**

Driving with an overheated engine can cause serious engine damage (page 7-16).
Fuel Gauge

The fuel gauge shows approximately how much fuel is in the tank. We recommend keeping the tank over 1/4 full. When the low fuel warning light illuminates or when the needle is near E, refuel as soon as possible.

Dashboard Illumination

When the headlight switch is in the or position, rotate the thumb-wheel to adjust the brightness of the dashboard lights.

Diagram of fuel gauge and dashboard illumination controls.

**Brake System Warning Light**

This warning has the following functions:

**Parking brake warning**
The light comes on when the parking brake is applied with the ignition switch in the START or ON position. It goes off when the parking brake is fully released.

**Low brake fluid level warning**
If the light stays on after the parking brake is fully released, you may have a brake problem.

Drive to the side of the road and park off the right-of-way.

You may notice that the pedal is harder to push or that it may go closer to the floor. In either case, it will take longer to stop the vehicle.

1. With the engine stopped, check the brake fluid level immediately and add fluid as required (page 8-17).
2. After adding fluid, check the light again.

If the warning light remains on, or if the brakes do not operate properly, do not drive the vehicle. Have it towed to an Authorized Mazda Dealer.

Even if the light goes out have your brake system inspected as soon as possible by an Authorized Mazda Dealer.

**NOTE**

Having to add brake fluid is sometimes an indicator of leakage. Consult an Authorized Mazda Dealer as soon as possible even if the brake light is no longer illuminated.

**WARNING**

Brake Warning Light:
Driving with the brake system warning light on is dangerous. It indicates that your brakes may not work at all or that they could completely fail at any time. If this light remains on, after checking that the parking brake is fully released, have the brakes inspected immediately. Don’t drive with this light on, have the vehicle towed to an Authorized Mazda Dealer to have the brakes inspected as soon as possible.

**ABS Warning Light***

The warning light stays on for a few seconds when the ignition switch is turned to the ON position.

*Some models.
If the ABS warning light stays on while you're driving, the ABS control unit has detected a system malfunction. If this occurs, your brakes will function normally as if the vehicle had no ABS. Should this happen, consult an Authorized Mazda Dealer as soon as possible.

**NOTE**

- When the engine is jump-started to charge the battery, uneven rpm occurs and the ABS warning light comes on. This is due to a weak battery, not a malfunction. Recharge the battery.
- When the ABS warning light remains illuminated, the power sliding doors cannot be opened electrically. Refer to “Power Sliding Doors” (page 3-12).

**Electronic Brake Force Distribution System Warning**

If the electronic brake force distribution control unit determines that some components are operating incorrectly, the control unit may turn the brake system warning light and the ABS warning light on at the same time. The problem is likely to be an electronic brake force distribution system.

**WARNING**

**ABS Warning Light and Brake Warning Light on at the Same Time:**
Driving when the brake system warning light and ABS warning light are on at the same time is dangerous. When both lights are on, the rear wheels could lock more quickly in an emergency stop than under normal circumstances.
Don't drive with both lights on, have the vehicle towed to an Authorized Mazda Dealer to have the brakes inspected as soon as possible.

**Charging System Warning Light**

This warning light illuminates when the ignition switch is turned to the ON position and turns off when the engine is started.

If the warning light illuminates while driving, it indicates a malfunction of the alternator or of the charging system. Drive to the side of the road and park off the right-of-way. Consult an Authorized Mazda Dealer.

*Some models.* 5-27
Driving Your Mazda

Warning/Indicator Lights and Beep Sounds

⚠️ CAUTION

Don't continue driving when the charging system warning light is illuminated because the engine could stop unexpectedly.

▼ Engine Oil Pressure Warning Light

This warning light illuminates when the ignition switch is turned to the ON position and turns off when the engine is started.

This warning light indicates low engine oil pressure.

If the light illuminates while driving:
1. Drive to the side of the road and park off the right-of-way on level ground.
2. Turn off the engine and inspect the engine oil level (page 8-12). If it's low, add oil.
3. Check the light.

If the light remains illuminated even after you add oil, have your vehicle towed to an Authorized Mazda Dealer.

⚠️ CAUTION

Don't run the engine if oil pressure is low. It could result in extensive engine damage.

▼ Check Engine Light

If this light comes on while driving, the vehicle may have a problem. It is important to note the driving conditions when the light came on and consult an Authorized Mazda Dealer.

The check engine light may come on in the following cases:
• The fuel tank level being very low or approaching empty.
• The engine's electrical system has a problem.
• The emission control system has a problem.
• The fuel-filler cap is missing or not tightened securely.

If the check engine light remains on or flashes continuously, do not drive at high speeds and consult an Authorized Mazda Dealer as soon as possible.
Warning/Indicator Lights and Beep Sounds

▼ Air Bag/Front Seat Belt Pretensioner System Warning Light

If the air bag/front seat belt pretensioner system is normal, the warning light illuminates when the ignition switch is turned to the ON position or after the engine is cranked. After about 6 seconds it goes out.

A system malfunction is indicated when the warning light constantly flashes, constantly illuminates or doesn't illuminate at all when the ignition switch is turned to the ON position. If any of these occur, consult an Authorized Mazda Dealer as soon as possible. The system may not work in an accident.

⚠️ WARNING

Self-Servicing the Air Bag/Pretensioner Systems:
Self-servicing or tampering with the systems is dangerous. An air bag/pretensioner could accidentally activate or become disabled. This could cause serious injuries. Never tamper with the systems and always have an Authorized Mazda Dealer perform all servicing and repairs.

▼ Low Fuel Warning Light

This warning light in the fuel gauge signals that the fuel tank will soon be empty. Refuel as soon as possible.

▼ Seat Belt Warning Light

If the driver’s seat belt is not fastened when the ignition switch is turned to the ON position, the seat belt warning light will remain on until the belt is fastened. If the system does not operate correctly, consult an Authorized Mazda Dealer.

▼ Door-Ajar Warning Light

This warning light comes on when any door or liftgate isn't securely closed.
Driving Your Mazda

Warning/Indicator Lights and Beep Sounds

▼ Immobilizer System Warning/Security Indicator Light *

Immobilizer system warning light
When the key is in the ignition switch, this light serves as the immobilizer system warning light.

If the immobilizer system is working properly, the light will come on when the ignition switch is turned to the ON or START position. The light will go out when confirmation by the immobilizer system is completed.

If the light flashes rapidly, fails to come on, or comes on and stays on, it indicates a system malfunction. If any of these occur, contact an Authorized Mazda Dealer as soon as possible.

Security indicator light
When there is no key in the ignition switch, and the theft-deterrent system has been armed, the light will flash once every 3 seconds. This indicates that the system is working properly.

▼ Headlight High-Beam Indicator Light

This light indicates one of two things:
• The high-beam headlights are on.
• The turn signal lever is in the flash-to-pass position.

▼ O/D OFF Indicator Light

This light comes on when the overdrive has been turned off.

⚠ CAUTION
If the overdrive-off indicator light flashes, the transaxle has an electrical problem. Continuing to drive your Mazda in this condition could cause damage to your transaxle. Consult an Authorized Mazda Dealer as soon as possible.
⚠️ **Shift Position Indicator Light**

This indicates the selected shift position when the ignition switch is in the ACC or ON position.

![PRND32](image)

⚠️ **TCS Indicator Light** *

This indicator light stays on for a few seconds when the ignition switch is turned to the ON position. If the TCS is operating, the indicator light flashes.

If the light stays on, the TCS may have a malfunction and it may not operate correctly. Take your vehicle to an Authorized Mazda Dealer.

**NOTE**

- In addition to the indicator light flashing, a slight lugging sound will come from the engine. This indicates that the TCS is operating properly.
- On slippery surfaces, such as fresh snow, it will be impossible to achieve high rpm when the TCS is on.

⚠️ **TCS OFF Indicator Light** *

This light comes on when the ignition switch is turned to the ON position. It goes off when the engine is started. It also comes on when you switch off the traction control system or when the system has a malfunction.

**NOTE**

After starting the engine on very cold days, the TCS OFF indicator will remain on and TCS will not operate until the engine is warm.

⚠️ **Cruise Main Indicator Light** *

This light comes on when the ON/OFF switch is pressed and the cruise control system is activated.

*Some models.*
Driving Your Mazda
Warning/Indicator Lights and Beep Sounds

▼ Cruise Set Indicator Light *

CRUISE

This light comes on when a cruising speed is set.

▼ Turn-Signal/Hazard Warning Indicator Lights

When operating the turn signal lights, the left or right turn signal indicator light flashes to indicate which turn signal light is operating (page 5-34).

When operating the hazard warning lights, both turn signal indicator lights flash (page 5-38).

NOTE

If an indicator light remains illuminated (does not flash) or if it flashes abnormally, one of the turn signal bulbs may be burned out.

Beep Sounds

▼ Seat Belt Warning Beep

If the driver's seat belt is not fastened when the ignition switch is turned to the ON position, a beep sound will be heard for about 6 seconds.

▼ Ignition Key Reminder

If the ignition switch is in the LOCK or ACC position with the key inserted, a continuous beep sound will be heard when the driver's door is opened.

▼ Lights-On Reminder

If lights are on and the key is removed from the ignition switch, a continuous beep sound will be heard when the driver's door is opened.

▼ Power Sliding Door Beep *

The beep sound will be heard according to the power sliding door operation. If there is a malfunction in the power sliding door system, a beep sound will be heard continuously. If this happens, press the power sliding doors main switch to the OFF position and the beep sound will stop. Consult an Authorized Mazda Dealer to have the power sliding doors checked. Refer to Power Sliding Doors on page 3-12.

* Some models.
Lighting Control

Headlights
To turn on the lights, turn the headlight switch on the end of the control lever.

</tbody>
</table>

**NOTE**
To prevent discharging the battery, don't leave the lights on while the engine is off unless safety requires them.

Lights-On Reminder
If lights are on and the key is removed from the ignition switch, a continuous beep sound will be heard when the driver's door is opened.

Headlight High-Low Beam
Push the lever forward for high beam. Pull back to original position for low beam.

Flashing the Headlights
To flash the headlights, pull the lever fully toward you. The headlight switch does not need to be on, and the lever will return to the normal position when released.
Switches and Controls

Daytime Running Lights (Canada Model)

In Canada, vehicles must be driven with the headlights on during daytime operation.

For that reason, the daytime running lights automatically turn on when the ignition switch is turned to the ON position.

NOTE

The Daytime Running Lights turn off when the parking brake is applied.

Turn and Lane-Change Signals

Turn Signal

Move the signal lever down (for a left turn) or up (for a right turn) to the stop position. The signal will self-cancel after the turn is completed.

If the indicator light continues to flash after a turn, manually return the lever to its original position.

Right turn

Right lane change

OFF

Left lane change

Left turn

Green indicators on the dashboard show which signal is working.

Lane-change signals

Move the lever slightly toward the direction of the change — until the indicator flashes — and hold it there. It will return to the off position when released.

NOTE

If an indicator light stays on without flashing or if it flashes abnormally, one of the turn signal bulbs may be burned out.
Fog Lights *

Use this switch to turn on the fog lights. They help you to see as well as to be seen.

To turn the front fog lights on, rotate the fog light switch to the ⬇️ position. The headlight switch must be in the ⬆️ position to turn on the front fog lights.

To turn them off, rotate the fog light switch to the OFF position or turn the headlight switch to the ⬆️ or OFF position.

NOTE

The fog lights will turn off when the headlights are set at high beam.

Windshield Wipers and Washer

The ignition switch must be in the ON position.

⚠️ WARNING

Substitute Washer Fluid:
Using radiator antifreeze as washer fluid is dangerous. If sprayed on the windshield, it will dirty the windshield, affect your visibility, and could result in an accident. Use only windshield washer fluid or plain water in the reservoir.

Frozen Washer Fluid:
Using windshield washer fluid without anti-freeze protection in freezing temperatures is dangerous. The washer fluid could freeze on the windshield and block your vision. You could have an accident. Don't use the washer without first warming the windshield and never use plain tap water.
NOTE
Because heavy ice and snow can jam the wiper blades, the wiper motor is protected from motor breakdown, overheating and possible fire by a circuit breaker. This mechanism will automatically stop operation of the blades, but only for about 5 minutes. If this happens, turn off the wiper switch and park off the right-of-way, and remove the snow and ice. After 5 minutes, turn on the switch and the blades should operate normally. If they don't resume functioning, consult an Authorized Mazda Dealer as soon as possible. Drive to the side of the road and park off the right-of-way. Wait until the weather clears before trying to drive with the wipers inoperative.

Windshield Wipers

Turn the wipers on by pulling the lever down.
MIST — Mist
INT — Intermittent
1 — Normal
2 — Fast

For a single wiping cycle, push the lever up to MIST.

Variable-speed intermittent wipers
Set the lever to INT and choose the interval timing by rotating the ring.

Windshield Washer
Pull the lever toward you and hold it to spray washer fluid.

NOTE
With the wiper lever in the OFF or INT position, the wipers will operate continuously until the lever is released.

If the washer doesn't work, inspect the fluid level (page 8-20). If it's OK, consult an Authorized Mazda Dealer.
**Rear Window Wiper and Washer**

The ignition switch must be in the ON position.

**▼ Rear Window Wiper**

Turn the wiper on by turning the rear wiper/washer switch.  
ON — Normal  
INT — Intermittent

**▼ Rear Window Washer**

To spray washer fluid, turn the rear wiper/washer switch to the position. After the switch is released, the washer will stop.  
If the washer doesn't work, inspect the fluid level (page 8-20). If it's OK and the washer still doesn't work, consult an Authorized Mazda Dealer.

---

**Rear Window Defroster**

The rear window defroster clears frost, fog, and thin ice from the rear window.

The ignition switch must be in the ON position.

Press the switch to turn on the rear window defroster, the indicator light will illuminate.

Press the switch again to turn it off.

---

**CAUTION**

Don't use sharp instruments or window cleaners with abrasives to clean the inside of the rear window surface. They may damage the defroster grid inside the window.

**NOTE**

This defroster is not designed for melting snow. If there is an accumulation of snow on the rear window, remove it before using the defroster.
Horn

To sound the horn, press around the mark on the steering wheel.

Hazard Warning Flasher

The hazard warning lights should always be used when you stop on or near a roadway.

The hazard warning lights warn other drivers that your vehicle is a traffic hazard and that they must take extreme caution when near it.

Depress the hazard warning flasher and all four turn signals will flash.

NOTE

- The turn signals don't work when the hazard warning lights are on.
- Check local regulations about the use of hazard warning lights while the vehicle is being towed. They may forbid it.
6 Interior Comfort

Operating Tips

▼ Operating the Climate Control System
Operate the climate control system with the engine running.

**NOTE**
To prevent the battery from being discharged, do not leave the fan control dial on for a long period of time with the ignition switch in the ACC position when the engine is not running.

▼ Clearing the Air Inlet
Clear all obstructions like leaves, snow and ice from the hood and the air inlet in the cowl grille to improve the system efficiency.

▼ Foggy Windows
The windows may fog up easily in humid weather. Use the climate control system to defog the windows.

To help defog the windows, operate the air conditioner to dehumidify the air.

**NOTE**
The air conditioner may be used along with the heater to dehumidify the air.

▼ Outside/Recirculated Air Position
Use the outside air position in normal conditions. The recirculated air position should be used only when driving on dusty roads or for quick cooling of the interior.

▼ Parking in Direct Sunlight
If the vehicle has been parked in direct sunlight during hot weather, open the windows to let warm air escape, then run the climate control system.

▼ Not Using for a Long Period
Run the air conditioner about 10 minutes at least once a month to keep internal parts lubricated.

▼ Check the Refrigerant before the Weather Gets Hot
Have the air conditioner checked before the weather gets hot. Lack of refrigerant may make the air conditioner less efficient. Consult an Authorized Mazda Dealer for refrigerant inspection.

The air conditioner is filled with HFC134a (R134a), a refrigerant that will not damage the ozone layer. If the air conditioner is low on refrigerant or has a malfunction, consult an Authorized Mazda Dealer.

▼ Replacement of the Cabin Air Filter
If your vehicle is equipped with an air filter for the air conditioner, it is necessary to change the filter periodically as indicated in scheduled maintenance (page 8-3). Consult an Authorized Mazda Dealer for replacement of the cabin air filter.
Adjusting the Vents

Directing airflow
You can direct air flow by moving the adjustment knob. Horizontal air flow can be adjusted by pressing the vent left or right.

Opening/closing vents
These vents can be opened and closed with wheel.

NOTE
When using the air conditioner, mist may come out from the vents. This is not a sign of trouble but a result of humid air being suddenly cooled.
Interior Comfort

Climate Control System

Selecting the Airflow Mode

Dashboard and Floor Vents

Defroster Vents

Floor Vents
### Control Panel (Front)

- **Temperature control dial**
  - Cold
  - Hot
  - This dial controls temperature. Turn it clockwise for hot and counterclockwise for cold.

- **Fan control dial**
  - 0 — Fan off
  - 1 — Low speed
  - 2 — Medium low speed
  - 3 — Medium high speed
  - 4 — High speed
  - This dial allows variable fan speeds.

- **A/C switch**

- **Mode selector dial**

- **Air intake selector switch**

- **Rear air-conditioner main switch**
Interior Comfort

Climate Control System

Mode selector dial

Turn the mode selector dial to select airflow mode (page 6-4).

A/C switch

Push the A/C switch to turn the air conditioner on. The indicator light on the switch will illuminate when the fan control dial is set at position 1, 2, 3, or 4.

Push the switch once again to turn the air conditioner off.

Air intake selector

This switch controls the source of air entering the vehicle.

Press the switch to alternate between the positions. The indicator light for the selected mode will illuminate.

It is recommended that under normal conditions the switch be kept in the outside air position.

Outside air position ( )
Outside air is taken into the vehicle. Use this position for normal ventilation and heating.

Recirculated air position ( )
Outside air is shut off. Air within the vehicle is recirculated.

This position can be used when driving on a dusty road or in similar conditions. It also helps to provide quicker cooling of the interior.

NOTE

The air conditioner may not function when the outside temperature approaches 0 °C (32 °F).
**WARNING**

The Recirculated Air Position:
Using the position in cold or rainy weather will cause the windows to fog up. Your vision will be hampered, which could lead to a serious accident. Do not use the position in cold or rainy weather.

**Heating**

1. Set the mode selector dial to the position.
2. Set the air intake selector to the position.
3. Set the temperature control dial to the hot position.
4. Set the fan control dial to the desired speed.
5. If dehumidified heating is desired, turn on the air conditioner.

**NOTE**

- If the windshield fogs up easily, set the mode selector dial to the position.
- If cooler air is desired at face level, set the mode selector dial at the position and adjust the temperature control dial to maintain maximum comfort.
- The air to the floor is warmer than air to the face (except when the temperature control dial is set at the extreme hot or cold position).

**Cooling (With Air Conditioner)**

1. Set the mode selector dial to the position.
2. Set the temperature control dial to the cold position.
3. Set the fan control dial to the desired speed.
4. Turn on the air conditioner by pressing the A/C switch.
5. Adjust the fan control dial and temperature control dial to maintain maximum comfort.

**CAUTION**

When using the air conditioner while driving up long hills or in heavy traffic, closely monitor the temperature gauge (page 5-22). The air conditioner may cause engine overheating. If the gauge indicates overheating, turn the air conditioner off (page 7-16).
NOTE

- When maximum cooling is desired, set the temperature control dial to the extreme cold position and set the air intake selector to the position, then set the fan control dial to position 4.
- If warmer air is desired at floor level, set the mode selector dial at the position and adjust the temperature control dial to maintain maximum comfort.
- The air to the floor is warmer than air to the face (except when the temperature control dial is set at the extreme hot or cold position).

**WARNING**

**Foggy Windshield:**
Using the position with the temperature control set to the cold position will cause the outside of the windshield to fog up. Your vision will be hampered, which could lead to a serious accident. Set the temperature control to the hot or warm position when using the position.

NOTE

- For maximum defrosting, set the temperature control dial to the extreme hot position and the fan control dial to position 4.
- If warm air is desired at the floor, set the mode selector dial to the position.
- In the or position, the air conditioner is automatically turned on (however, the indicator light does not illuminate) and the position is automatically selected to defrost the windshield.
  - In the or position, the position cannot be changed to the position.

**Windshield Defrosting and Defogging**

1. Set the mode selector dial to the position.
2. Set the temperature control dial to the desired position.
3. Set the fan control dial to the desired speed.

**Dehumidifying (With Air Conditioner)**

Operate the air conditioner in cool or cold weather to help defog the windshield and side windows.

1. Set the mode selector dial to the desired position.

**Ventilation**

1. Set the mode selector dial to the position.
2. Set the air intake selector to the position.
3. Set the temperature control dial to the desired position.
4. Set the fan control dial to the desired speed.
2. Set the air intake selector to the position.

3. Set the temperature control dial to the desired position.

4. Set the fan control dial to the desired speed.

5. Turn on the air conditioner by pressing the A/C switch.

NOTE

One of the functions of the air conditioner is dehumidifying the air and, to use this function, the temperature does not have to be set to cold. Therefore, set the temperature control dial to the desired position (hot or cold) and turn on the air conditioner when you want to dehumidify the cabin air.
Interior Comfort

Climate Control System

Vent Operation (Rear)

* Depending on the model some vents may not be available.

▼ Adjusting the Vents

Directing airflow
You can direct air flow by moving the adjustment knob.

NOTE
When using the air conditioner, mist may come out from the vents. This is not a sign of trouble but a result of humid air being suddenly cooled.

**NOTE**

When the rear air conditioner main switch is not set to the REAR position, the fan control dial of the rear air conditioner control panel does not work. The front air conditioner controls override the rear controls.

**Mode selector dial (Type B)**

Turn the dial to select the cooler mode or the heater mode.

寒 — cooler mode
暖 — heater mode
Interior Comfort

Audio System

Antenna

▼ Detachable Type

To remove the antenna, turn it counterclockwise.
To install the antenna, turn it clockwise.
Make sure the antenna is securely installed.

⚠️ CAUTION

To prevent damage to the antenna, remove it before entering a car wash facility or passing beneath a low overhead clearance.

NOTE

When leaving your vehicle unattended, we recommend that you remove the antenna and store it inside the vehicle.

Operating Tips for Audio System

⚠️ WARNING

Do Not Adjust Audio While Driving the Vehicle:

Adjusting the audio while driving the vehicle is dangerous as it could distract your attention from the vehicle operation which could lead to a serious accident. Always adjust the audio while the vehicle is stopped. Even if the audio control switches are equipped on the steering wheel, learn to use the switches without looking down at them so that you can keep your maximum attention on the road while driving the vehicle.

⚠️ CAUTION

For the purposes of safe driving, adjust the audio volume to a level that allows you to hear sounds outside of the vehicle.

NOTE

- Do not use the audio for long periods of time while the engine is off. Otherwise the battery could go dead.
- If a digital cellular phone or CB radio is used in or near the vehicle, it could cause noise to occur from the audio system, however, this does not indicate that the system has been damaged.
Radio Reception

AM characteristics
AM signals bend around such things as buildings or mountains and bounce off the ionosphere. Therefore, they can reach longer distances than FM signals. Because of this, two stations may sometimes be picked up on the same frequency at the same time.

FM characteristics
An FM broadcast range is usually about 40—50 km (25—30 miles) from the source. Because of extra coding needed to break the sound into two channels, stereo FM has even less range than monaural (non-stereo) FM.

Signals from an FM transmitter are similar to beams of light because they do not bend around corners, but they do reflect. Unlike AM signals, FM signals cannot travel beyond the horizon. Therefore, FM stations cannot be received at the great distances possible with AM reception.

Atmospheric conditions can also affect FM reception. High humidity will cause poor reception. However, cloudy days may provide better reception than clear days.

Multipath noise
Since FM signals can be reflected by obstructions, it is possible to receive both the direct signal and the reflected signal at the same time. This causes a slight delay in reception and may be heard as a broken sound or a distortion. This problem may also be encountered when in close proximity to the transmitter.
Flutter/Skip noise
Signals from an FM transmitter move in straight lines and become weak in valleys between tall buildings, mountains, and other obstacles. When a vehicle passes through such an area, the reception conditions may change suddenly, resulting in annoying noise.

Weak signal noise
In suburban areas, broadcast signals become weak because of distance from the transmitter. Reception in such fringe areas is characterized by sound breakup.

Strong signal noise
This occurs very close to a transmitter tower. The broadcast signals are extremely strong, so the result is noise and sound breakup at the radio receiver.

Station drift noise
When a vehicle reaches the area of two strong stations broadcasting at similar frequencies, the original station may be temporarily lost and the second station picked up. At this time there will be some noise from this disturbance.
Operating Tips for Cassette Tape Player

Cleaning the cassette tape player
The tape head, capstans, and pinch rollers will gather oxide residue from cassette tapes. This can cause weak or wavering sounds and damage to the cassette tapes and player. Use a good quality head-cleaning tape or a liquid cleaner cassette tape to remove it. Should the unit not operate normally, consult an Authorized Mazda Dealer. Never attempt to repair it or insert a screwdriver or anything else.

Handling the cassette tape player
The following precautions should be observed.

- Do not spill any liquid on the audio system.
- Do not insert any objects, other than cassette tape, into the slot.
- If the cassette tape is loose, it may produce poor sound or performance during playback. Use a pencil or something similar to remove any slack.
- Only cassette tapes that play no longer than 90 minutes should be used. Cassette tape exceeding 90 minutes are thin and may easily break.
- Do not leave a cassette tape in the tape player slot when not in use. Remove it completely to permit the slot door to close and to protect the mechanism from dust.
- Store cassette tapes away from extreme heat, magnetic fields, and direct sunlight. Protect the exposed cassette tape from dirt and damage. Store cassette tapes in their original cases or other protective cases.
Operating Tips for Mini Disc (MD) Player

The following precautions should be observed.

- Do not spill any liquid on the audio system.
- Do not insert any objects, other than MDs, into the slot.
- The MD player has been designed to play MDs bearing the identification logo as shown. No other MDs can be played.
- The MD player can also play MDLPs that have been recorded in MDLP mode. (MDLPs bearing the identification logo as shown below).
- When inserting the MD, make sure the MD label is facing up, and the MD is oriented to the insertion slot in the direction of the arrow. If not inserted correctly, the MD will be ejected, or may remain stuck in the MD deck.
- Do not touch the internal part of the MD. If the MD shutter is slid open for no reason, it may be broken.
- Store MDs in their cases and away from direct sunlight.
Operating Tips for CD Player/In-Dash CD Changer

Condensation phenomenon
Immediately after turning on the heater when the vehicle is cold, the CD or optical components (prism and lens) in the CD player/changer may become clouded with condensation. At this time, the CD will eject immediately when placed in the unit. A clouded CD can be corrected simply by wiping it with a soft cloth. Clouded optical components will clear naturally in about an hour. Wait for normal operation to return before attempting to use the unit.

Handling the CD player/In-dash CD changer
The following precautions should be observed.

- Do not spill any liquid on the audio system.

- Do not insert any objects, other than CDs, into the slot.

- The CD revolves at high speed within the unit. Defective (cracked or badly bent) CDs should never be used.

- Do not use non-conventional discs such as heart-shaped, octagonal discs, etc. The CD player/changer could be damaged.

- A new CD may have rough edges on its inner and outer perimeters. If a disc with rough edges is used, proper setting will not be possible and the CD player/changer will not play the CD. Remove the rough edges in advance by using a ball-point pen or pencil as shown below. To remove the rough edges, rub the side of the pen or pencil against the inner and outer perimeter of the CD.
Interior Comfort

Audio System

- When driving over uneven surfaces, the sound may jump.

- The CD player/changer has been designed to play CDs bearing the identification logo as shown. No other discs can be played.

- Be sure never to touch the signal surface when handling the CDs. Pick up a CD by grasping the outer edge or the edge of the hole and the outer edge.

- Do not stick paper or tape on the CD. Avoid scratching the reverse side (the side without a label).

- Dust, finger smudges, and dirt can decrease the amount of light reflected from the signal surface, thus affecting sound quality. If the CD should become soiled, gently wipe it with a soft cloth from the center of the CD to the edge.

- Do not use record sprays, antistatic agents, or household spray cleaners. Volatile chemicals such as benzine and thinner can also damage the surface of the CD and must not be used. Anything that can damage, warp, or fog plastic should never be used to clean CDs.

- CDs, like traditional audio records, are made of plastic. To avoid warping, keep the CDs in their cases and do not store them where they will be exposed to direct sunlight.

- The CD player/changer ejects the CD if the CD is inserted upside down. Also dirty and/or defective CDs may be ejected.

- 8 cm (3 in) CDs and CD accessories (e.g. 8 cm disc adapter) cannot be used in the CD player/changer.

- Do not insert cleaning discs in the CD player/changer.

- Do not insert any disc with a peel-off or seal on it.

Power ON/OFF
Turn the ignition switch to the ACC or ON position.

Press the power/volume dial to turn the audio system on.
Press the power/volume dial again to turn the audio system off.

NOTE
To prevent the battery from being discharged, do not leave the audio system on for a long period of time when the engine is not running.

Volume adjustment
To adjust the volume, turn the power/volume dial.

Audio sound adjustment
1. Press the audio control dial to select the function. The selected function will be indicated.
2. Turn the audio control dial to adjust the selected functions as follows:

- **BASS**
  - Turn Left: Decrease bass
  - Turn Right: Increase bass
- **MID**
  - Turn Left: Decrease mid-range
  - Turn Right: Increase mid-range
- **TREB**
  - Turn Left: Decrease treble
  - Turn Right: Increase treble
- **FADE**
  - Turn Left: Shift the sound to the front
  - Turn Right: Shift the sound to the rear
- **BAL**
  - Turn Left: Shift the sound to the left
  - Turn Right: Shift the sound to the right
- **BEEP**
  - Turn Left: OFF
  - Turn Right: ON

* Depending on the mode selected, the indication changes.

<table>
<thead>
<tr>

<td>Shift the sound to the left</td>
<td>Shift the sound to the right</td>
</tr>
<tr>
<td>BEEP</td>
<td>OFF</td>
<td>ON</td>
</tr>
</tbody>
</table>

**NOTE**

About 5 seconds after selecting any mode, the volume function will be automatically selected. To reset bass, mid-range, treble, fade and balance, press the audio control dial for 2 seconds. The unit will beep and “CLEAR” will be displayed.
Setting the time
The clock can be set at any time when the ignition switch is in the ACC or ON position.

1. To adjust the time, press the clock button (CLOCK) for about 2 seconds until a beep is heard.
   The clock's current time will flash.

2. To advance the hours, press the hour set button (H). To advance the minutes, press the minute set button (M) while the time is flashing.

3. Press the clock button (CLOCK) again to start the clock.

Exact hour adjustment
1. To set the exact hour, press the clock button (CLOCK) for about 2 seconds until a beep is heard.
   The clock's current time will flash.

2. Press the clock button (CLOCK) again and the time will be adjusted as follows:
   (Example)
   12:01 → 12:29 → 12:00
   12:30 → 12:59 → 1:00
When the clock button (CLOCK) is released, the seconds are reset to “00”.

If the power supply to the unit is interrupted (if the fuse blows or the vehicle's battery is disconnected), the clock will need to be reset.

**Changing the display mode**

The display on the unit can be changed by pressing the clock button (CLOCK). This alternates the display between clock mode and normal mode. When the clock mode has been selected, the time will be displayed.

**NOTE**

The displays differ when using the audio in clock mode and normal mode.
Operating the Radio

Band selector button
Display
Satellite button*

Seek tuning button
Auto memory button/Electric serial number button*

Channel preset buttons
Manual tuning dial

For reception of optional SIRIUS digital satellite radio.
Used on vehicles equipped with the separately sold SIRIUS digital satellite radio unit.
For information on use, read the manual accompanying the SIRIUS unit.
Subscription of SIRIUS digital satellite radio service is available in the U.S. (Except Alaska and Hawaii).

Radio ON
Press a band selector button (FM/AM) to turn the radio on.

Band selection
Successively pressing the band selector button (FM/AM) switches the bands as follows: FM1 → FM2 → AM.

The selected mode will be indicated. If FM stereo is being received, “ST” will be displayed.

NOTE
If the FM broadcast signal becomes weak, reception automatically changes from STEREO to MONO for reduced noise, and the “ST” indicator will go out.

Tuning
The radio has the following tuning methods: Manual, Seek, Scan, Preset channel, and Auto memory tuning. The easiest way to tune stations is to set them on preset channels.

NOTE
If the power supply is interrupted (fuse blows or the battery is disconnected), the preset channels will be canceled.

Manual tuning
Turning the manual tuning dial will change the frequency higher or lower.
Seek tuning
Pressing the seek tuning button (▲,▼) will cause the tuner to seek a higher or lower frequency automatically.

NOTE
If you continue to press and hold the button, the frequency will continue changing without stopping.

Scan tuning
Press the scan button (SCAN) to automatically sample strong stations. Scanning stops at each station for about 5 seconds. To hold a station, merely press the scan button (SCAN) again during this interval.

Preset channel tuning
The 6 preset channels can be used to store 6 AM and 12 FM stations.

1. To set a channel first select AM, FM1, or FM2. Tune to the station you want.

2. Depress a channel preset button for about 2 seconds until a beep is heard. The preset channel number and station frequency will be displayed. The station is now held in the memory.

NOTE
When the clock is displayed, the preset channel number will not be displayed.

3. Repeat this operation for the other stations and bands you want to store. To tune one in the memory, select AM, FM1, or FM2 and then press its channel preset button. The station frequency and the channel number will be displayed.

NOTE
If the power supply is interrupted (fuse blows or the battery is disconnected), the preset channels will be canceled.

Auto memory tuning
This is especially useful when driving in an area where the local stations are not known. Additional AM/FM stations can be stored without disturbing the previously set channels.

Press and hold the auto memory button (AUTO-M) for about 2 seconds until a beep is heard; the system will automatically scan and temporarily store up to 6 stations with the strongest frequencies in each selected band in that area.

After scanning is completed, the station with the strongest frequency will be tuned and its frequency displayed. Press and release the auto memory button (AUTO-M) to recall stations from the auto-stored stations. One stored station will be selected each time; its frequency and channel number will be displayed.

NOTE
• When the clock is displayed, the preset channel number will not be displayed.
• If no stations can be tuned after scanning operations, “A” will be displayed.
Operating the Cassette Tape Player*

Insert the cassette tape into the slot, open edge to the right and cassette tape will begin play and “TAPE” will be displayed. At the end of the cassette tape, the unit automatically reverses cassette tape play. When \[ U \quad U \] is lit, the cassette tape's top side is playing. When \[ U \quad U \] is lit, the bottom side is on.

**NOTE**

When a metal tape is inserted, the player will automatically compensate for it.

Playing

Press the cassette tape play button (MD/TAPE ) to start playing when a cassette tape is in the unit. If there isn't a cassette tape in the unit when the cassette tape play button (MD/TAPE ) is pressed, “No TAPE” will flash on and off in sequence.
**Dolby noise reduction**

When using a tape with Dolby NR*, push the Dolby NR button (B). The symbol will be displayed. To play a tape without Dolby NR, push the button once again.

* Noise reduction system manufactured under license from Dolby Laboratories Licensing Corporation. Dolby and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation.

**Ejecting the cassette tape**

Press the cassette tape eject button (E) to eject the cassette tape.

<table>
<thead>
<tr>
<th>NOTE</th>
</tr>
</thead>
<tbody>
<tr>
<td>The cassette tape can be ejected when the ignition switch is in the OFF position.</td>
</tr>
</tbody>
</table>

**Fast-forward/Rewind**

Press the fast-forward button (F) to fast-forward.
Press the rewind button (R) to rewind.
To stop this operation and play the cassette tape, press the button again.

<table>
<thead>
<tr>
<th>NOTE</th>
</tr>
</thead>
<tbody>
<tr>
<td>When the cassette tape ends during fast-forward or rewind, it automatically stops and starts playing.</td>
</tr>
</tbody>
</table>

**Reversing**

Press the program button (P) to change cassette tape-playing direction.

<table>
<thead>
<tr>
<th>NOTE</th>
</tr>
</thead>
<tbody>
<tr>
<td>When the cassette tape ends, the unit automatically reverses play.</td>
</tr>
</tbody>
</table>

**Automatic program control (APC)**

APC is used to find the beginning of either the next program or the one being played.

Press the APC button (A) to the beginning of the next selection.
Press the APC button (B) to the beginning of the one being played. To stop this operation and play the cassette tape, press the button again.

If APC detects 4 seconds of blank space it will automatically advance the tape to the next selection.

<table>
<thead>
<tr>
<th>NOTE</th>
</tr>
</thead>
<tbody>
<tr>
<td>APC may not operate properly if</td>
</tr>
<tr>
<td>- A tape was recorded at a low level.</td>
</tr>
<tr>
<td>- A tape has long, silent intervals.</td>
</tr>
<tr>
<td>- A tape is a live recording.</td>
</tr>
<tr>
<td>- A tape has very short intervals of less than 3 seconds.</td>
</tr>
</tbody>
</table>

**Repeat play**

This operation makes it possible to listen to a selection repeatedly.

Press the repeat button (R) during play. The current selection playing will be repeated (“RPT” will be displayed).
Press the repeat button (R) once again to cancel repeat play.
NOTE
RPT may not operate properly if
• A tape was recorded at a low level.
• A tape has long, silent intervals.
• A tape is a live recording.
• A tape has very short intervals of less than 3 seconds.
MEMO
Interior Comfort
Audio System

\textbf{\textgreater\ Operating the Mini Disc (MD) Player \textasteriskcentered}

![Diagram of MD player controls]

\textbf{Inserting the MD}
Insert the MD, label-side up with the arrow pointed to the slot. The auto-loading mechanism will set the MD and begin play. There will be a short lapse before play begins while the player reads the digital signals on the MD. The track number and the elapsed play back time for the current track will be displayed on the display.

\textbf{NOTE}
When the clock is displayed, the elapsed play back time will not be displayed. To display the elapsed play back time, turn the audio control dial to the right. Turn the dial to the left to return to the previous display.

\textbf{Playing}
Press the MD play button (\texttt{MD/TAPE}) to start playing when a MD is in the unit.

\textbf{Ejecting the MD}
Press the MD eject button (\texttt{}) to eject the MD.

\textbf{Fast-forward/Reverse}
Press and hold the fast-forward button (\texttt{\textless\textgreater\textgreater\textless\textgreater}) to advance through a track at high speed. Press and hold the reverse button (\texttt{\textless\textgreater\textless\textgreater}) to reverse through a track at high speed.

6-32 * Some models.
Track search
Press the track up button (hores) once to skip forward to the beginning of the next track.
Press the track down button (tick) once to skip back to the beginning of the current track.

Music scan
This feature helps to find a program by playing about the first 10 seconds of each track.
Press the scan button (SCAN) during play to start scan play operation (the track number will flash).
Press the scan button (SCAN) once again to cancel scan play.

NOTE
If the unit is left in scan, normal play will resume where scan was selected.

Repeat play
This feature makes it possible to listen to a selection repeatedly.
Press the repeat button (RPT) during play. The current selection will be repeated (“RPT” will be displayed).
Press the repeat button (RPT) once again to cancel repeat play.

Random play
This feature allows the MD player to randomly select the order of the songs.
Press the random button (RDM) during play. The next selection will be randomly selected (“RDM” will be displayed).
Press the random button (RDM) once again to cancel random play.

Changing the display

Display
To change the display during MD play, press the display button (DISP) to advance through each of the following displays:
Track number/Elapsed play back time→Song title→Disc title.

NOTE
• If there is no song or disc title recorded on the MD, “No TITLE” will be displayed.
• The display can only display English (including numerals) one-byte characters. If any other character is included “No TITLE” will be displayed.

When long disc or song titles cannot be completely displayed, rotate the display feed dial (TEXT) to the right. The remainder of the title will proceed and appear on the display to the end of the title.

MD display
To change the MD display during MD play, press and hold the MD display button (DISP) for about half a second to advance through each of the following displays:
Song title→Disc title→No display.

NOTE
If there is no song or disc title recorded on the MD, “No TITLE” will be displayed.
When long disc or song titles cannot be completely displayed, press the MD display button (DISP) to display the remaining part of the title.
MEMO
Inserting the CD
Inserting the CD into the slot, label-side up. The auto-loading mechanism will set the CD and begin play. There will be a short lapse before play begins while the player reads the digital signals on the CD. The disc-in indicator will illuminate, and the track number and the elapsed play back time for the current track will be displayed.

NOTE
When the clock is displayed, the elapsed play back time will not be displayed. To display the elapsed play back time, turn the audio control dial to the right. Turn the dial to the left to return to the previous display.

Playing
Press the CD play button (CD) to start playing when a CD is in the unit.

Ejecting the CD
Press the CD eject button (▲) to eject the CD.

Fast-forward/Reverse
Press and hold the fast-forward button (►►) to advance through a track at high speed. Press and hold the reverse button (◄◄) to reverse through a track at high speed.

Some models.
Track search
Press the track up button (/jpeg) once to skip forward to the beginning of the next track.
Press the track down button (/jpeg) once to skip back to the beginning of the current track.

Music scan
This feature helps to find a program by playing about the first 10 seconds of each track.
Press the scan button (JPEG) during play to start scan play operation (the track number will flash).
Press the scan button (JPEG) once again to cancel scan play.

NOTE
If the unit is left in scan, normal play will resume where scan was selected.

Repeat play
This feature makes it possible to listen to a selection repeatedly.
Press the repeat button (JPEG) during play. The current selection will be repeated (“RPT” will be displayed).
Press the repeat button (JPEG) once again to cancel repeat play.

Random play
This feature allows the CD player to randomly select the order of the songs.
Press the random button (JPEG) during play. The next selection will be randomly selected (“RDM” will be displayed).
Press the random button (JPEG) once again to cancel random play.
Operating the In-Dash CD Changer

Inserting the CD
The CD must be label-side up when inserting. The auto-loading mechanism will set the CD and begin play. There will be a short lapse before play begins while the player reads the digital signals on the CD. The disc number, the track number and the elapsed play back time for the current track will be displayed.

NOTE
- When the clock is displayed, the elapsed play back time will not be displayed. To display the elapsed play back time, turn the audio control dial to the right. Turn the dial to the left to return to the previous display.
- A CD cannot be inserted while the display reads “WAIT”. A beeping sound can be heard during this waiting time. Simultaneously pressing the power/volume dial and the load button (LOAD) for about 2 seconds will turn this beeping sound ON or OFF.

* Some models.
Normal insertion

1. Press the load button (LOAD).
2. When “In” is displayed, insert the CD.

Inserting CDs into desired tray number

1. Press and hold the load button (LOAD) for about 2 seconds until a beep is heard.
2. Press the channel preset button for the desired tray number within 3 seconds after the beep is heard.
3. When “In” is displayed, insert the CD.

NOTE

The CD cannot be inserted to the desired tray number if the number is already occupied.

Multiple insertion

1. Press and hold the load button (LOAD) for about 2 seconds until a beep is heard.
2. When “In” is displayed, insert the CD.
3. When “In” is displayed again, insert the next CD.

NOTE

The first-inserted CD will be played automatically when:
- No other CD is inserted within 15 seconds after “In” is displayed.
- The CD trays are full.

Ejecting the CD

Normal ejection

1. Press the CD eject button ( ). The disc number and “DISC OUT” will be displayed.
2. Pull out the CD.

NOTE

When the CD is ejected during play, the next CD will be played automatically.

Ejecting CDs from desired tray number

1. Press and hold the CD eject button ( ) for about 2 seconds until a beep is heard.
2. Press the channel preset button for the desired CD number within 3 seconds after the beep is heard.
3. Pull out the CD.

Multiple ejection

1. Press and hold the CD eject button ( ) for about 2 seconds until a beep is heard.
2. Wait 3 seconds or press the CD eject button ( ) again within 3 seconds after the beep is heard.
3. Pull out the CD, then the next CD will be ejected.
NOTE
- CDs will be ejected starting with the one with the lowest number.
- All CDs in the tray will be ejected continuously.
- CDs can be ejected when the ignition switch is off. Press and hold the CD eject button (▲) for about 2 seconds and all CDs will eject.

Playing
Press the CD play button (CD) to start playing when a CD is in the unit.

Fast-forward/Reverse
Press and hold the fast-forward button (►►) to advance through a track at high speed.
Press and hold the reverse button (◄◄) to reverse through a track at high speed.

Track search
Press the track up button (▲) once to skip forward to the beginning of the next track.
Press the track down button (▼) once to skip back to the beginning of the current track.

Disc search
Press the disc up button (DISC▲) to skip forward to the beginning of the next CD.
Press the disc down button (DISC▼) to skip back to the beginning of the previous CD.

Music scan
This feature helps to find a program by playing about the first 10 seconds of each track.

Press the scan button (SCAN) during play to start scan play operation (the track number will flash).
Press the scan button (SCAN) once again to cancel scan play.

NOTE
If the unit is left in scan, normal play will resume where scan was selected.

Repeat play
This feature makes it possible to listen to a selection repeatedly.
Press the repeat button (RPT) during play.
The current selection will be repeated ("RPT” will be displayed).
Press the repeat button (RPT) once again to cancel repeat play.

Random play
This feature allows the CD player to randomly select the order of the songs.
Press the random button (RDM) during play. The next selection will be randomly selected ("RDM” will be displayed).
Press the random button (RDM) once again to cancel random play.
### Error Indications

If you see an error indication on the display, find the cause in the chart. If you cannot clear the error indication, take the vehicle to an Authorized Mazda Dealer.

<table>

</table>
Audio Control Switch
Operation (Steering Wheel)*

NOTE
Mazda has installed this system to prevent distraction while driving the vehicle and using audio controls on the dashboard. Always make safe driving your first priority.

▼ Adjusting the Volume
To increase the volume, press the volume button (+).
To decrease the volume, press the volume button (−).

▼ Changing the Source
Press the mode switch (MODE) to change the audio source (FM1 radio > FM2 radio > AM radio > CD player or CD changer > SIRIUS1 > SIRIUS2 > SIRIUS3 > Cassette tape player or MD player > cyclical).

NOTE
Cassette tape, MD, CD, CD changer and SIRIUS digital satellite radio modes cannot be selected in the following cases:
- A cassette deck, MD, CD, CD changer, or SIRIUS digital satellite radio unit is not equipped on the audio system.
- A cassette tape, MD, or CD has not been inserted.
When listening to the radio
Press the seek switch (▲, ▼), the radio switches to the next/previous stored station in the order that it was stored (1—6).

Press the seek switch (▲, ▼) for about 2 seconds until a beep sound is heard to seek all usable stations at a higher or lower frequency whether programmed or not.

When playing a cassette tape
Press the seek switch (▲), release, and it will advance to the next selection.
Press the seek switch (▼), release, and it will repeat the selection being played.

When playing a CD or MD
Press the seek switch (▲) to skip to the next track.
Press the seek switch (▼) to repeat the current track.

▼ Mute Switch
Press the mute switch (・) once to mute audio, press it again to resume audio output.
Safety Certification

This CD player is made and tested to meet exacting safety standards. It meets FCC requirements and complies with safety performance standards of the U.S. Department of Health and Human Services.

⚠️ CAUTION ⚠️

- This CD player should not be adjusted or repaired by anyone except qualified service personnel.
  If servicing is required, contact an Authorized Mazda Dealer.
- Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous laser exposure. Never operate the CD player with the top case of the unit removed.
- Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

NOTE

For CD player section:
This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.
Sunvisors

When you need a sunvisor, lower it for use in front or swing it to the side.

\[\text{Sunvisor}\]

\textbf{\textbullet} \textbf{Side Extention Sunvisors}

The visor extender extends the sunvisor's range of sun shading.
To use, pull it out.

\[\text{Side Extention Sunvisor}\]

\textbf{\textbullet} \textbf{Vanity Mirrors}

To use the vanity mirror, lower the sunvisor.
If your vehicle is equipped with a vanity mirror light, it will illuminate when you open the cover.

\[\text{Vanity Mirror}\]

\textbf{\textbullet} \textbf{CAUTION}

When moving the sunvisor, reinsert the visor extender, otherwise the visor extender could hit the rearview mirror.

\[\text{CAUTION}\]

Interior Equipment

**Interior Lights**

**▼ Illuminated Entry System** *

When the illuminated entry system operates, the overhead light (switch is in the DOOR position), the luggage compartment light (switch is in the ON position) and the courtesy lights turn on for:

- About 30 seconds after the driver's door is unlocked and the ignition key is removed.
- About 15 seconds after all doors are closed.
- About 15 seconds after the key is removed from the ignition with all doors closed.

The light also turns off when:

- The ignition switch is turned to the ON position and all doors are closed.
- The driver's door is locked.

**NOTE**

**Battery saver**

If any door is left opened, the light goes out after about 5 minutes to save the battery.

The light turns on again when the ignition switch is turned to the ON position, or when any door is opened after all doors have been closed.

**▼ Courtesy Lights**

Turns on when any door is open or the illuminated entry system is on.
The ignition switch must be in the ACC or ON position. Press the lighter in and release it. When ready for use, it automatically pops out.

**CAUTION**

- Don't touch the metal part of the lighter, you may burn yourself.
- Don't hold the lighter in because it will overheat.
- Don't use the lighter socket for plug-in accessories such as shavers and coffee pots. They may damage it or cause electrical failure. Use only a genuine Mazda lighter or the equivalent.
- If the lighter doesn't pop out within 30 seconds, remove it to prevent overheating.

---

**Lighter**

---

**Ashtray**

⚠️ **CAUTION**

Don't use the ashtray for trash. You might start a fire.

▼ **Front**

To open, pull the tray out and open the cover.

To remove, open and pull up the ashtray.
WARNING

Using Ashtray Removed from its Fixed Position:
Using an ashtray removed from its fixed position or not completely inserted is dangerous. Cigarettes could roll around or spill out of the ashtray into the vehicle and start a fire. Moreover, cigarette stubs will not extinguish themselves completely even if the ashtray lid is closed. Only use a rear ashtray in its fixed position, and make sure it is completely inserted.

Type A
To remove, open the cover and pull the ashtray upward.

Type B
To remove, open and push down on the lock spring.
Cup Holder

WARNING

Using Cup Holder:
Using a cup holder to hold hot liquids while the vehicle is moving is dangerous. If the contents spill, you could be scalded. Never use a cup holder to hold hot liquids while the vehicle is moving.

Don’t Put Anything Other Than Cups or Drink cans in Cup Holder:
Putting objects other than cups or drink cans in a cup holder is dangerous. During sudden braking or maneuvering, occupants could be hit and injured, or objects could be thrown around the vehicle, causing interference with the driver and the possibility of an accident. Only use a cup holder for cups or drink cans.

Using Cup Holder as Ashtray:
Using a cup holder as an ashtray is dangerous because it could cause a fire or damage the cup holder. Be sure the removable ashtray is in place before smoking and never use the cup holder as an ashtray.

CAUTION

To reduce the possibility of injury in an accident or a sudden stop, keep cup holders closed when not in use.

NOTE

Replacement ashtrays are available from an Authorized Mazda Dealer if they are missing.

Front
To use, pull the tray out.

Rear
Second seat (Passenger seat only)
The cup holder is located on the outboard side of the right second-row seats. To use the cup holder, pull it out.
**Seat side table**

**To use the cup holder**

1. Raise the table (page 2-6)(page 2-11).
2. Pull the cup holder end to extend it rearwards.

**To collapse the table**

1. Push the cup holder back into the table.
2. Pull the lever under the table, then lower it (page 2-6)(page 2-11). After the table is collapsed, press the table surface to lock it in place.

**Third seat**

If an ashtray is equipped, pull it out and use the hole for an additional cup holder.

---

**Interior Comfort**

**Interior Equipment**
Bottle Holders

Bottle holders are on the inside of the sliding doors.

⚠️ CAUTION
Don't use the bottle holders for containers without caps. The contents may spill when the door is opened or closed.

Storage Compartments

⚠️ WARNING
Open Storage Boxes:
Driving with the storage boxes open is dangerous. To reduce the possibility of injury in an accident or a sudden stop, keep the storage boxes closed when driving.

⚠️ CAUTION
Don't leave lighters or eyeglasses in the storage boxes while parked under the sun. A lighter could explode or the plastic material in eyeglasses could deform and crack from high temperature.

▼ Overhead Console *
This console box is designed to store a garage door opener or other accessories. Push and release to open.

To store the garage door opener:
1. Open the console box.
2. Take out the urethane spacer.

* Some models.
3. Open the cap by pushing it from inside the box.

4. Store the garage door opener by adjusting the thickness with the urethane spacers.

**Eyeglass Holder**

Push the lid to open.

**Glove Box**

To open the glove box, pull the latch toward you. Insert the key and turn it clockwise to lock, counterclockwise to unlock.

**Front Console**

Pull the latch to open.

*Some models.*
Under Seat Tray (Front Passenger Seat Only)
Lift the latch and pull the tray forward.

Storage Box (In Seat Side Table)
To use the storage box
1. Raise the table (page 2-6) (page 2-11).
2. Push the button to open.

To collapse the table
1. Close the lid on the storage box.
2. Pull the lever under the table, then lower it (page 2-6) (page 2-11). After the table is collapsed, press the table surface to lock it in place.

Rear Console *
Push the knob and open the cover.

*Some models.
**Interior Comfort**

**Interior Equipment**

▼ Cargo Securing Loops

**WARNING**

*Not Securing Luggage and Cargo:*
Not securing cargo while driving is dangerous as it could move or be crushed during sudden braking or a collision and cause injury. Make sure luggage and cargo is secured before driving.

Use the loops in the luggage compartment to secure cargo with a rope or net. The tensile strength of the loops is 196N (20 kgf, 44 lbf). Do not apply excessive force to the loops as it will damage them.

Floor

▼ Shopping Bag Hooks

The shopping bag hook can be used for hanging shopping bags.

**CAUTION**

Do not hang excessive weight on the shopping bag hook as it could be damaged.
Accessory Sockets *
The ignition switch must be in the ACC or ON position. Only use genuine Mazda accessories or the equivalent requiring no greater than 120 W (DC 12 V, 10 A).

Front

Rear

CAUTION
To prevent accessory socket damage or electrical failure, pay attention to the following:
- Don't use accessories that require more than 120 W (DC 12 V, 10 A).
- Don't use accessories that are not genuine Mazda accessories or the equivalent.
- Close the cover when the accessory socket is not in use.
- Correctly insert the plug into the accessory socket.

NOTE
To prevent discharging the battery, don't use the socket for long periods with the engine off or idling.

*Some models.

Parking in an Emergency

The hazard warning lights should always be used when you stop on or near a roadway.

The hazard warning lights warn other drivers that your vehicle is a traffic hazard and that they must take extreme caution when near it.

Depress the hazard warning flasher and all four turn signals will flash.

**NOTE**

- The turn signals don't work when the hazard warning lights are on.
- Check local regulations about the use of hazard warning lights while the vehicle is being towed. They may forbid it.
In Case of an Emergency

Flat Tire

Spare Tire and Tool Storage

Spare tire and tools are stored in the locations illustrated in the diagram.

- Jack
- Tool bag
- Spare tire
- Spare tire lever
- Tire clamp
- Jack lever
- Lug wrench
- Vinyl bag
- Flat tire securing bolt
In Case of an Emergency

Flat Tire

▼ Jack

To remove the jack

1. Remove the cover.

2. Remove the tool bag.

3. Turn the wing bolt counterclockwise.

To secure the jack

Perform the removal procedure in reverse.

▼ Spare Tire

Your Mazda has a temporary spare tire. The temporary spare tire is lighter and smaller than a conventional tire, and is designed only for emergency use and should be used only for VERY short periods. Temporary spares should NEVER be used for long drives or extended periods.

⚠️ WARNING

Driving with a Temporary Spare Tire on Ice or Snow:
Driving with a spare tire on the front (driving) wheels on ice or snow is dangerous. Handling will be affected. You could lose control of the vehicle and have an accident. Put the spare tire on the rear axle and move a regular tire to the front.
CAUTION

- When using the temporary spare tire, driving stability may decrease compared to when using only the conventional tire. Drive carefully.

- To avoid damage to the temporary spare or to the vehicle, observe the following precautions:
  - Don't exceed 80 km/h (50 mph).
  - Avoid driving over obstacles. Also, don't drive through an automatic car wash. This tire's diameter is smaller than a conventional tire's, so the ground clearance is reduced about 25 mm (1 in).
  - Don't use a tire chain on this tire because it won't fit properly.
  - Don't use your temporary spare on any other vehicle; it has been designed only for your Mazda.
  - Do not tow a trailer while using this tire.
  - Use only one temporary spare tire on your vehicle at the same time.

To remove the spare tire

1. Have everyone get out of the vehicle and away from the vehicle and traffic.

2. For side-spoiler equipped vehicles, remove the fasteners on both sides of the spoiler cap by turning them counterclockwise. Pull the spoiler cap out.

NOTE

After installing the side spoiler cap, make sure it is securely attached.
In Case of an Emergency

Flat Tire

3. Locate the spare tire carrier socket cap on the right, in front of the second-row seat. Unscrew it by turning it counterclockwise.

4. Remove the spare tire lever and lug wrench from the tool bag.

5. Raise the reclining lever and push the front seatback forward and out of the way. Make sure the seatback is locked.

6. Insert the spare tire lever into the spare tire carrier socket. Fit the lug wrench to the opposite end of the spare tire lever.

7. Slowly turn the lug wrench counterclockwise until the spare tire reaches the ground and the cable becomes loose.

**CAUTION**

- Do not loosen the cable too much as this may cause damage to the spare tire carrier.
- Turning the lug wrench with the seat reclined could damage the seatback material.
- Applying excessive lateral force while the spare tire lever is attached may result in damage to the socket.

**NOTE**

The spare tire lever remains locked in the socket while the spare tire is being lowered. Unless the cable is rolled up completely, the spare tire lever cannot be removed from the socket.
8. Rotate the small lever on top of the retaining plate and pull the retaining plate out from the center hole of the tire.

To secure the spare tire

1. Place the tire with the outer side facing upward, rotate the small lever on top of the retaining plate and slide the retaining plate through the center hole of the tire. Rotate the small lever into place.

2. Raise the spare tire slowly in reverse order of removal.

**NOTE**

A flat tire which has been removed from the vehicle for repair cannot be carried in the spare tire carrier. Secure the flat tire with the tire clamp and wing nut in the luggage compartment (page 7-12).

**WARNING**

**Carrier Placement for the Specialized Temporary Spare Tire:**

Placing the specialized temporary spare tire in the spare tire carrier wrong side up or using any tire other than the small temporary spare tire designed for use with this vehicle is dangerous. It will result in poor attachment and insufficient ground clearance in the spare tire carrier and the danger of the tire falling off. This could result in someone being badly injured or even killed.

Place the specialized temporary spare tire in the spare tire carrier correctly.
In Case of an Emergency

Flat Tire

⚠️ CAUTION
Applying excessive lateral force while the spare tire lever is attached may result in damage to the socket.

NOTE
Unless the cable is rolled up completely, the spare tire lever cannot be removed from the socket.

3. Replace the spare tire carrier cap in the socket and turn it until the spare tire is pulled up tight.

⚠️ WARNING

Loose Spare Tire Carrier Socket: A loose spare tire carrier socket cap is dangerous. The cable could be cut causing the spare tire to fall off. This could result in someone being badly injured or even killed. Always screw the spare tire carrier socket cap completely tight and make sure the spare tire is locked in the highest position.

⚠️ CAUTION
If you hear rattling from the spare tire carrier while the vehicle is moving, the spare tire carrier cable may be cut. Have it repaired at an Authorized Mazda Dealer as soon as possible.
Changing a Flat Tire

NOTE

If the following occurs while driving, it could indicate a flat tire.

- Steering becomes difficult.
- The vehicle begins to vibrate excessively.
- The vehicle pulls in one direction.

If you have a flat tire, drive slowly to a level spot that is well off the road and out of the way of traffic to change the tire. Stopping in traffic or on the shoulder of a busy road is dangerous.

WARNING

Jacking a Vehicle:
Changing a tire is dangerous if not done properly. The vehicle can slip off the jack and seriously injure someone. Be sure to follow the directions for changing a tire, and never get under a vehicle that is supported only by a jack.

Passenger in Vehicle Supported by a Jack:
Allowing someone to remain in a vehicle supported by a jack is dangerous. The occupant could cause the vehicle to fall resulting in serious injury. Never allow anyone inside a vehicle supported by a jack.

NOTE

Make sure the jack is well lubricated before using it.

1. Park on a level surface off the right-of-way and firmly set the parking brake.
2. Shift into Park (P) and turn off the engine.
3. Turn on the hazard warning flasher.
4. Have everyone get out of the vehicle and away from the vehicle and traffic.
5. Remove the jack, tool bag, and spare tire (page 7-3).
6. Block the wheel diagonally opposite the flat tire. When blocking a wheel, place a tire block both in front and behind the tire.

NOTE

When blocking a tire, use rocks or wood blocks of sufficient size to hold the tire in place.

CAUTION

If the jack leans towards the front or the rear when jacking up, lower the vehicle until the wheels are firmly on the ground. Then confirm that the parking brake is set, the shift lever is in Park (P), then push the blocks firmly under the blocked tire.
**Removing a Flat Tire**

1. If your vehicle is equipped with a wheel cover, pry off the wheel cover with the beveled end of the jack lever.

   ![Diagram of wheel cover removal]

   **NOTE**
   Force the end of the jack lever firmly between wheel and cover, or removal will be difficult.

   **CAUTION**
   Align the notch on the wheel cover with the valve stem when installing it.

   ![Diagram of notch and valve stem alignment]

   Damage could occur during installation if the wheel cover is not properly aligned.

2. Loosen the lug nuts by turning them counterclockwise one turn each, but don't remove any lug nuts until the tire has been raised off the ground.

3. Place the jack under the jacking position closest to the tire being changed.

   ![Diagram of jack placement]

   **CAUTION**
   Align the notch on the wheel cover with the valve stem when installing it.
WARNING

Incorrect Jacking Position:
Attempting to jack the vehicle in positions other than those recommended in this manual is dangerous. The vehicle could slip off the jack and seriously injure or even kill someone. Use only the front and rear jacking positions recommended in this manual.

Improper Jack:
Using a jack that isn't designed for your Mazda is dangerous. The vehicle could slip off the jack and seriously injure someone. Use only the jack provided with your Mazda.

Placing Objects Under the Jack:
Jacking the vehicle with an object under the jack is dangerous. The jack could slip and someone could be seriously injured by the jack or the falling vehicle. Never place objects under the jack.

4. Insert the jack lever and attach the lug wrench to tire jack.

5. Turn the lug wrench clockwise and raise the vehicle high enough so that the spare tire can be installed. Before removing the lug nuts, make sure your Mazda is firmly in position and that it cannot slip or move.

6. Remove the lug nuts by turning them counterclockwise; then remove the wheel.
In Case of an Emergency

Flat Tire

▼ Locking Lug Nuts *

If your vehicle has optional antitheft wheel lug nuts, one on each wheel will lock the tires and you must use a special key to unlock them. This key is attached to the lug wrench and is stored with the spare tire. Register them with the lock manufacturer by filling out the card provided in the glove box and mailing it in the accompanying envelope. If you lose this key, consult an Authorized Mazda Dealer or use the lock manufacturer's order form, which is with the registration card.

To remove an antitheft lug nut

1. Obtain the key for the antitheft lug nut.
2. Place the key on top of the nut, and be sure to hold the key square to it. If you hold the key at an angle, you may damage both key and nut. Don't use a power impact wrench.
3. Place the lug wrench on top of the key and apply pressure. Turn the wrench counterclockwise.

To install the nut

1. Place the key on top of the nut, and be sure to hold the key square to it. If you hold the key at an angle, you may damage both key and nut. Don't use a power impact wrench.
2. Place the lug wrench on top of the key, apply pressure, and turn it clockwise.

▼ Mounting the Spare Tire

1. Remove dirt and grime from the mounting surfaces of the wheel and hub, including the hub bolts, with a cloth.

⚠️ WARNING

Removing Dirt and Grime from Wheels, Hubs and Hub Bolts:
When changing or replacing a tire, not removing dirt and grime from the mounting surfaces of the wheel, hub and hub bolts is dangerous. The lug nuts could loosen while driving and cause the tire to come off, resulting in an accident. Make sure the mounting surfaces of the wheel, hub and lug nuts are clean before changing or replacing tires.

*Some models.
2. Mount the spare tire.

3. Install the lug nuts with the beveled edge inward; tighten them by hand.

4. Turn the lug wrench counterclockwise and lower the vehicle. Use the lug wrench to tighten the nuts in the order shown.

If you're unsure of how tight the nuts should be, have them inspected at an Authorized Mazda Dealer.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

**WARNING**

Don't Apply Oil or Grease to Lug Nuts, Bolts:
Applying oil or grease to lug nuts and bolts is dangerous. The lug nuts could loosen while driving and cause the tire to come off, resulting in an accident. In addition, lug nuts and bolts could be damaged if tightened more than necessary. Do not apply oil or grease to lug nuts and bolts and do not tighten the lug nuts beyond the recommended tightening torque.
In Case of an Emergency

Flat Tire

**WARNING**

*Loose Lug Nuts:*
Improperly or loosely tightened lug nuts are dangerous. The wheel could wobble or come off. This could result in loss of vehicle control and cause a serious accident. Always securely and correctly tighten the lug nuts.

*Metric Studs and Lug Nuts:*
Because the wheel studs and lug nuts on your Mazda have metric threads, using a non-metric nut is dangerous. On a metric stud, it would not secure the wheel and would damage the stud, which could cause the wheel to slip off and cause an accident. Be sure to reinstall the same nuts you removed or replace them with metric nuts of the same configuration.

5. If your vehicle is equipped with a center cap, pry off the center cap with the beveled end of the jack lever.

6. Put the flat tire in the special vinyl bag and tie it at the top.

7. With the tire facing outward, punch a hole through the vinyl bag and the center hole, using the flat tire securing bolt.

8. Lift the anchor clip on the back of third-row seat.
9. Install the flat tire with the tire securing bolt hooked in the anchor clip as shown below.

10. Secure the flat tire with the tire clamp and wing nut as shown below.

11. Check the inflation pressure. Refer to the specification charts on page 10-6.

12. Have the flat tire repaired or replaced as soon as possible.

**⚠️ WARNING**

Incorrect Tire Air Pressure:

_Driving on tires with incorrect air pressure is dangerous. Tires with incorrect pressure could affect handling and result in an accident. Don't drive with any tires that have incorrect air pressure. When you check the regular tires' air pressure, check the spare tire, too._

**NOTE**

- If the tire rattles even through the wing nut is tightened, reverse the tire clamp and retighten the wing nut.
- To prevent the jack and tool from rattling, store them properly.
In Case of an Emergency

Overheating

If the temperature gauge indicates overheating, the vehicle loses power, or you hear a loud knocking or pinging noise, the engine is probably too hot.

**WARNING**

**Cooling Fan and Engine**

*Inspection:*
Inspecting the engine with the ignition switch in the ON position is dangerous. The cooling fan could turn on unexpectedly even when the engine isn't running. You could be seriously injured by the fan. Turn the ignition switch off and remove the key from the ignition switch when you inspect the engine.

**Cooling System Cap:**

When the engine and radiator are hot, scalding coolant and steam may shoot out under pressure and cause serious injury. Don't remove the cooling system cap when the engine and radiator are hot.

Steam from Overheated Engine:
Steam from an overheated engine is dangerous. The escaping steam could seriously burn you. Open the hood ONLY after steam is no longer escaping from the engine.

---

If the temperature gauge indicates overheating:

1. Drive safely to the side of the road and park off the right-of-way.
2. Shift into park (P).
   Apply the parking brake.
3. Turn off the air conditioner.
4. Check whether coolant or steam is escaping from under the hood or from the engine compartment.

   **If steam is coming from the engine compartment:**
   Don't go near the front of the vehicle. Stop the engine. Wait until the steam dissipates, then open the hood and start the engine.

   **If neither coolant nor steam is escaping:**
   Open the hood and idle the engine until it cools.

---

**CAUTION**

If the cooling fan does not operate while the engine is running, the engine temperature will increase. Stop the engine and call an Authorized Mazda Dealer.

5. Make sure the cooling fan is operating, then turn off the engine after the temperature has decreased.
6. When cool, check the coolant level. If it's low, look for coolant leaks from the radiator and hoses.
**In Case of an Emergency**

**Overheating**

If you find a leak or other damage, or if coolant is still leaking:
Stop the engine and call an Authorized Mazda Dealer.

If you find no problems, the engine is cool, and no leaks are obvious:
Carefully add coolant as required (page 8-14).

⚠️ **CAUTION**

If the engine continues to overheat or frequently overheats, have the cooling system inspected. The engine could be seriously damaged unless repairs are made. Consult an Authorized Mazda Dealer.
In Case of an Emergency

Emergency Starting

**Starting a Flooded Engine**

If the engine fails to start, it may be flooded (excessive fuel in the engine).

Follow this procedure:

1. Depress the accelerator all the way and hold it there.

2. Turn the ignition switch to the START position and hold it there—for up to 10 seconds. If the engine starts, release the key and accelerator immediately because the engine will suddenly rev up.

3. If the engine fails to start, crank it without depressing the accelerator—for up to 10 seconds.
Jump-Starting

Jump-starting is dangerous if done incorrectly. So follow the procedure carefully. If you feel unsure about jump-starting, we strongly recommend that you have a competent service technician do the work.

⚠️ WARNING

Follow These Precautions Carefully:
To ensure safe and correct handling of the battery, read the following precautions carefully before using the battery or inspecting it.

Eye Protection:
Working without eye protection is dangerous. Battery fluid contains SULFURIC ACID which could cause blindness if splashed into your eyes. Also, hydrogen gas produced during normal battery operation, could ignite and cause the battery to explode. Always wear eye protection when working near the battery.

Spilled Battery Fluid:
Spilled battery fluid is dangerous. Battery fluid contains SULFURIC ACID which could cause serious injuries if it gets in eyes, skin or clothing. If this happens, immediately flush your eyes with water for 15 minutes or wash your skin thoroughly and get medical attention. Wear eye protection and protective gloves to prevent contact with battery fluid.

Children and Batteries:
Allowing children to play near batteries is dangerous. Battery fluid could cause serious injuries if it gets in the eyes or on the skin. Always keep batteries out of the reach of children.
In Case of an Emergency

Emergency Starting

⚠️ WARNING

Keep Flames Away:
Flames and sparks near open battery cells are dangerous. Hydrogen gas, produced during normal battery operation, could ignite and cause the battery to explode. An exploding battery can cause serious burns and injuries. Keep all flames, including cigarettes and sparks away from open battery cells. When working near a battery, do not allow metal tools to contact the positive (+) or negative (−) terminal of the battery. Do not allow the positive (+) terminal to contact the vehicle body.

Battery-Related Explosion:
Flames and sparks near open battery cells are dangerous. Hydrogen gas, produced during normal battery operation, could ignite and cause the battery to explode. An exploding battery can cause serious burns and injuries. Keep all flames, including cigarettes, and sparks away from open battery cells.

Low Fluid Level or Frozen Battery:
Jump-starting a frozen battery or one with a low fluid level is dangerous. It may rupture or explode, causing serious injury. Don't jump-start a frozen battery or one with a low fluid level.

Connecting to Negative Terminal:
Connecting the end of the second cable to the negative (−) terminal of the discharged battery is dangerous. A spark could cause the gas around the battery to explode and injure someone. Connect the negative cable to a good ground point away from the battery.

Connecting Jumper Cable to Moving Parts:
Connecting a jumper cable near or to moving parts (cooling fans, belts) is dangerous. The cable could get caught when the engine starts and cause serious injury. Never connect a jumper cable to or near any part that moves.

⚠️ CAUTION

Use only a 12 V booster system. You can damage a 12 V starter, ignition system, and other electrical parts beyond repair with a 24 V power supply (two 12 V batteries in series or a 24 V motor generator set).
In Case of an Emergency

Emergency Starting

1. Make sure the booster battery is 12 V and that its negative terminal is grounded.

2. If the booster battery is in another vehicle, don't allow the vehicles to touch. Turn off the engine of the vehicle with the booster battery and all unnecessary electrical loads in both vehicles.

3. Connect the jumper cables in the exact sequence as in the illustration.
   - Connect one end of a cable to the positive terminal on the discharged battery (1).
   - Attach the other end to the positive terminal on the booster battery (2).
   - Connect one end of the other cable to the negative terminal of the booster battery (3).
   - Connect the other end to a solid, stationary, exposed metallic point (for example, the engine hanger) away from the discharged battery (4).

4. Start the engine of the booster vehicle and run it a few minutes. Then start the engine of the other vehicle.

5. When finished, carefully disconnect the cables in the reverse order described in Step 3.
In Case of an Emergency

Emergency Starting

**Push-Starting**

You can't start a vehicle with an automatic transaxle by pushing it.
Towing Description

We recommend that towing be done only by an Authorized Mazda Dealer or a commercial tow-truck service.

Proper lifting and towing are necessary to prevent damage to the vehicle. Government and local laws must be followed.

A towed vehicle usually should have its front wheels off the ground. If excessive damage or other conditions prevent this, use wheel dollies.

When towing with the rear wheels on the ground, release the parking brake.

⚠️ CAUTION

Don't tow the vehicle pointed backward with driving wheels on the ground. This may cause internal damage to the transaxle.

⚠️ CAUTION

Don't tow with sling-type equipment. This could damage your vehicle. Use wheel-lift or flatbed equipment.
**In Case of an Emergency**

**Emergency Towing**

---

### Tiedown Hooks

![Tiedown Hooks - Front](image)

**CAUTION**

Don't use the tiedown hooks under the front and rear for towing. They are designed ONLY for tying down the vehicle when it's being transported. Using them for towing will damage the bumper.

- **Tiedown Hooks - Front**

![Tiedown Hooks - Rear](image)

- **Tiedown Hook - Rear**

---

### Recreational Towing

An example of “recreational towing” is towing your vehicle behind a motorhome. The transaxle is not designed for towing this vehicle on all 4 wheels. When doing recreational towing refer to “Towing Description” (page 7-23) and “Tiedown Hooks” (page 7-24) and carefully follow the instructions.

Maintenance and Care

**Introduction**

Be extremely careful and prevent injury to yourself and others or damage to your vehicle when using this manual for inspection and maintenance.

If you're unsure about any procedure it describes, we strongly urge you to have a reliable and qualified service shop perform the work, preferably an Authorized Mazda Dealer.

Factory-trained Mazda technicians and genuine Mazda parts are best for your vehicle. Without this expertise and the parts that have been designed and made especially for your Mazda, inadequate, incomplete, and insufficient servicing may result in problems. This could lead to vehicle damage or an accident and injuries.

For expert advice and quality service, consult an Authorized Mazda Dealer.

The owner should retain evidence that proper maintenance has been performed as prescribed.

Claims against the warranty resulting from lack of maintenance, as opposed to defective materials or authorized Mazda workmanship, will not be honored.

Any auto repair shop using parts equivalent to your Mazda's original equipment may perform maintenance. **But we recommend that it always be done by an Authorized Mazda Dealer using genuine Mazda parts.**
Scheduled Maintenance

Follow Schedule 1 if the vehicle is operated mainly where none of the following conditions apply. If any do apply, follow Schedule 2 (Canada and Puerto Rico residents follow Schedule 2).

- Repeated short-distance driving
- Driving in dusty conditions
- Driving with extended use of brakes
- Driving in areas where salt or other corrosive materials are being used
- Driving on rough or muddy roads
- Extended periods of idling or low-speed operation
- Driving for long periods in cold temperatures or extremely humid climates
- Towing a trailer

NOTE

After the prescribed period, continue to follow the described maintenance at the recommended intervals.

Cabin air filter (if equipped) Replace every 40,000 km (25,000 miles) or 24 months

Chart symbols

I: Inspect and repair, clean, adjust, or replace if necessary.
R: Replace
L: Lubricate

Remarks

*1 According to state/provincial and federal regulations, failure to perform maintenance on these items will not void your emissions warranties. However, Mazda recommends that all maintenance services be performed at the recommended time or mileage/kilometer period to ensure long-term reliability.

*2 Use FL22 type coolant in vehicles with the inscription “FL22” on the radiator cap itself or the surrounding area. Use FL22 when replacing the coolant.

**Chart symbols**

- **I**: Inspect and repair, clean, adjust, or replace if necessary.
- **R**: Replace
- **L**: Lubricate

**Remarks**

1. According to state/provincial and federal regulations, failure to perform maintenance on these items will not void your emissions warranties. However, Mazda recommends that all maintenance services be performed at the recommended time or mileage/kilometer period to ensure long-term reliability.

2. If the vehicle is operated under any of the following conditions, change the spark plugs every 96,000 km (60,000 miles) or shorter.
   - **a)** Repeated short-distance driving
   - **b)** Extended periods of idling or low-speed operation
   - **c)** Driving for long periods in cold temperatures or extremely humid climates
   - **d)** Towing a trailer

3. Use FL22 type coolant in vehicles with the inscription “FL22” on the radiator cap itself or the surrounding area. Use FL22 when replacing the coolant.
Owner Maintenance Schedule

The owner or a qualified service technician should make these vehicle inspections at the indicated intervals to ensure safe and dependable operation.

Bring any problem to the attention of an Authorized Mazda Dealer or qualified service technician as soon as possible.

▼ When Refueling
- Brake fluid level (page 8-17)
- Engine coolant level (page 8-14)
- Engine oil level (page 8-12)
- Washer fluid level (page 8-20)

▼ At Least Monthly
Tire inflation pressures (page 8-29)

▼ At Least Twice a Year (For Example, Every Spring and Fall)
- Automatic transaxle fluid level (page 8-18)
- Power steering fluid level (page 8-18)

You can do the following scheduled maintenance items if you have some mechanical ability and a few basic tools and if you closely follow the directions in this manual.

- Air filter (page 8-21)
- Engine coolant (page 8-14)
- Engine oil (page 8-12)
Owner Maintenance Precautions

Improper or incomplete service may result in problems. This section gives instructions only for items that are easy to perform.

As explained in the Introduction (page 8-2), several procedures can be done only by a qualified service technician with special tools.

Improper owner maintenance during the warranty period may affect warranty coverage. For details, read the separate Mazda Warranty statement provided with the vehicle. If you're unsure about any servicing or maintenance procedure, have it done by an Authorized Mazda Dealer.

There are strict environmental laws regarding the disposal of waste oil and fluids. Please dispose of your waste properly and with due regard to the environment.

We recommend that you entrust the oil and fluid changes of your vehicle to an Authorized Mazda Dealer.

⚠️ WARNING

**Maintenance Procedures:**
Performing maintenance work on a vehicle is dangerous if not done properly. You can be seriously injured while performing some maintenance procedures. If you lack sufficient knowledge and experience or the proper tools and equipment to do the work, have it done by a qualified technician.

**Running the Engine:**
Working under the hood with the engine running is dangerous. It becomes even more dangerous when you wear jewelry or loose clothing. Either can become entangled in moving parts and result in injury. Therefore, if you must run the engine while working under the hood, make certain that you remove all jewelry (especially rings, bracelets, watches, and necklaces) and all neckties, scarves, and similar loose clothing before getting near the engine or cooling fan which may turn on unexpectedly.

**Electrical Fan and Engine Inspection:**
Inspecting the engine with the ignition switch in the ON position is dangerous. The cooling fan could come on unexpectedly even when the engine isn't running. You could be seriously injured by the fan. Turn the ignition switch off and remove the key from the ignition switch when you inspect the engine.
Owner Maintenance

Engine Compartment Overview

- Automatic transaxle fluid-level dipstick
- Cooling system cap
- Engine coolant reservoir
- Power steering fluid reservoir
- Windshield washer fluid reservoir
- Engine oil dipstick
- Engine oil-filler cap
- Engine oil filter
- Battery
- Fuse block
- Air filter
- Brake fluid reservoir
Engine Oil

▼ Recommended Oil

Use SAE 5W-20 engine oil.
Oil container labels provide important information.
A chief contribution this type of oil makes to fuel economy is reducing the amount of fuel necessary to overcome engine friction.

U.S.A. and CANADA

Only use oils “Certified For Gasoline Engines” by the American Petroleum Institute (API). An oil with this trademark symbol conforms to the current engine and emission system protection standards and fuel economy requirements of the International Lubricant Standardization and Approval Committee (ILSAC), comprised of U.S. and Japanese automobile manufacturers.

Excerpt U.S.A. and CANADA

Except U.S.A. and CANADA

8-11
The quality designation SL, or ILSAC must be on the label.

5W-20

**Inspecting Engine Oil Level**

1. Be sure the vehicle is on a level surface.

2. Warm up the engine to normal operating temperature.

3. Turn it off and wait at least 5 minutes for the oil to return to the oil pan.

4. Pull out the dipstick, wipe it clean, and reinsert it fully.

5. Pull it out again and examine the level. It's OK between MIN and MAX. But if it's near or below MIN, add enough oil to bring the level to MAX.

**CAUTION**

Don't add engine oil over MAX. This may cause engine damage.

6. Make sure the O-ring on the dipstick is positioned properly before reinserting the dipstick.

**Changing Engine Oil and Filter**

Change engine oil and filter according to Scheduled Maintenance (page 8-3).

Please act responsibly—protect the environment and take used oil to a recycling facility. Ask your dealer or a service station for information.

**WARNING**

*Handling Used Engine Oil:*
Continuous contact with used engine oil is dangerous. It could cause skin cancer. Always wash with soap and water immediately after changing oil and filter.

**CAUTION**

Remove any oil splatter from the exhaust manifold, the exhaust pipe and the shield. Oil left on these areas will smoke when the engine is running.
**Changing engine oil**

**WARNING**

**Checking or Changing Engine Oil:**
Hot engine oil is dangerous. If the engine has been running, the engine oil becomes very hot. You could be seriously burned. Don’t check or change the engine oil when the engine is hot.

1. Warm up the engine for a few minutes and turn it off. Remove the oil-filler cap.
2. Remove the drain plug and drain the oil into a suitable container.
3. Replace the plug tightly after the oil has thoroughly drained.
4. Fill the engine with new oil to the MAX mark on the dipstick.
5. Securely reinstall the oil-filler cap.
6. Start the engine and inspect around the drain plug for leaks.
7. Turn it off and wait 5 minutes for the oil to return to the oil pan.

Check the oil level and fill to the MAX mark if necessary.

**With oil filter replacement**

<table>
<thead>
<tr>
<th>Oil capacity (reference only)</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>L (US qt, Imp qt)</td>
<td>5.7 (6.0, 5.0)</td>
</tr>
</tbody>
</table>

**Without oil filter replacement**

<table>
<thead>
<tr>
<th>Oil capacity (reference only)</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>L (US qt, Imp qt)</td>
<td>5.2 (5.5, 4.6)</td>
</tr>
</tbody>
</table>

**NOTE**

- The indicated engine oil capacities are for general reference purposes only. When adding or changing oil, verify the engine oil level with the oil dipstick.
- Use only specified engine oil (page 10-4).

**Changing oil filter**

Because you need a special tool to retighten the filter, an Authorized Mazda Dealer should do the work.
Inspect the antifreeze protection and coolant level in the coolant reservoir at least once a year—at the beginning of the winter season—and before traveling where temperatures may drop below freezing.

Inspect the condition and connections of all cooling system and heater hoses. Replace any that are swollen or deteriorated.

The coolant should be at full in the radiator and between the F and L marks on the coolant reservoir when the engine is cool.

If it's at or near L, add enough coolant to the coolant reservoir to provide freezing and corrosion protection and to bring the level to F.

- **CAUTION**

  Radiator coolant will damage paint. Rinse it off quickly if spilled.

  If the coolant reservoir is empty or new coolant is required frequently, consult an Authorized Mazda Dealer.
Changing Coolant (Without Rear Heater)

Change coolant according to Scheduled Maintenance (page 8-3).

**CAUTION**

- Use only soft (demineralized) water in the coolant mixture. Water that contains minerals will cut down on the coolant's effectiveness.
- Don't add only water. Always add a proper coolant mixture.
- The engine has aluminum parts and must be protected by an ethylene-glycol-based coolant to prevent corrosion and freezing.
- DO NOT USE coolants Containing Alcohol, methanol, Borate or Silicate. These coolants could damage the cooling system.
- DO NOT MIX alcohol or methanol with the coolant. This could damage the cooling system.
- Don't use a solution that contains more than 60% antifreeze. This would reduce effectiveness.

**NOTE**

If the "FL22" mark is shown on or near the cooling system cap, use FL22 type engine coolant. If engine coolant other than FL22 type is used, the engine coolant must be replaced earlier than the specified replacement interval indicated in the scheduled maintenance (page 8-3).

**Except FL22 type**

For mixture percentage:

<table>
<thead>
<tr>
<th>Protection</th>
<th>Antifreeze solution</th>
<th>Demineralized water</th>
</tr>
</thead>
<tbody>
<tr>
<td>Above -16°C (3°F)</td>
<td>35%</td>
<td>65%</td>
</tr>
<tr>
<td>Above -26°C (−15°F)</td>
<td>45%</td>
<td>55%</td>
</tr>
<tr>
<td>Above -40°C (−40°F)</td>
<td>55%</td>
<td>45%</td>
</tr>
</tbody>
</table>

**FL22 type**

FL22 type engine coolant concentration is factory adjusted. Use the product as it is without diluting it.
To change coolant

**WARNING**

*Removing the Cooling System Cap:*

Removing the cooling system cap while the engine is running or hot is dangerous. This might lead to cooling system and engine damage and could result in serious injury from escaping hot coolant or steam. Turn off the engine and wait until it's cool. Even then, be very careful when removing the cap. Wrap a thick cloth around the cap and slowly turn it counterclockwise to the first stop. Step back while the pressure escapes. When you're sure all the pressure is gone, press down on the cap — still using a cloth — turn the cap, and remove it.

1. Make sure the engine is not running and it has cooled.
2. Remove the cooling system cap.
3. Remove the radiator drain plug and drain the coolant into a suitable container. Properly dispose of the used coolant.
4. Flush out the system with running water.
5. Drain the system completely. Insert and tighten the plug. Add as much ethylene-glycol-based coolant mixture and water (or undiluted FL22) as necessary to provide freezing and corrosion protection.
6. In extremely cold climates, add the mixture percentage recommended in the coolant mixture percentage table.
7. Run the engine at idle with the cooling system cap off. Slowly add additional coolant if necessary.
8. At this point, wait until the engine reaches normal operating temperature; then depress the accelerator two or three times. Add more coolant, if necessary, until the system is full.
9. Install the cooling system cap. Inspect all connections for leaks. Inspect the level in the coolant reservoir one more time and verify that the coolant level is between the F and L marks.

**Changing Coolant (With Rear Heater)**

Have an Authorized Mazda Dealer change the coolant according to the Scheduled Maintenance (page 8-3).

8-16
Brake Fluid

▼ Inspecting Brake Fluid Level

Inspect the fluid level in the reservoir regularly. It should be kept at MAX. The level normally drops with accumulated distance, a condition associated with wear of brake linings. If it is excessively low, have the brake system inspected by an Authorized Mazda Dealer.

WARNING

Spilled Brake Fluid:
Spilled brake fluid is dangerous. If it gets in your eyes, they could be seriously injured. If this happens, immediately flush your eyes with water and get medical attention. Brake fluid spilled on a hot engine could cause a fire. Be careful not to spill brake fluid on yourself or on the engine.

Low Brake Fluid Levels:
Low brake fluid levels are dangerous. Low levels could signal brake lining wear or a brake system leak. Your brakes could fail and cause an accident. If you find a low fluid level, have the brakes inspected.

If the fluid level is low, add fluid until it reaches MAX. Before adding fluid, thoroughly clean the area around the cap.

CAUTION

- Brake fluid will damage painted surfaces. If brake fluid does get on a painted surface, wipe it off immediately.

- Using nonspecified brake fluids (page 10-4) will damage the system. Mixing different fluids will also damage it. If the brake system frequently requires new fluid, consult an Authorized Mazda Dealer.
Power Steering Fluid

Inspecting Power Steering Fluid Level

⚠️ CAUTION
To avoid damage to the power steering pump, don't operate the vehicle for long periods when the power steering fluid level is low.

NOTE
Use specified power steering fluid (page 10-4).

Inspect the fluid level in the reservoir at each engine oil change with the engine off and cold. Add fluid if necessary; it does not require periodic changing.

The level must be kept between MIN and MAX.

Visually examine the lines and hoses for leaks and damage.

If new fluid is required frequently, consult an Authorized Mazda Dealer.

Automatic Transaxle Fluid (ATF)

Inspecting Automatic Transaxle Fluid Level

The automatic transaxle fluid level should be inspected regularly. Measure it as described below.

The volume of fluid changes with the temperature. Fluid must be checked at idle without driving at normal operating temperature.

⚠️ CAUTION
- Low fluid level causes transaxle slippage. Overfilling can cause foaming, loss of fluid, and transaxle malfunction.
- Use specified fluid (page 10-4). A nonspecified fluid could result in transaxle malfunction and failure.

1. Park on a level surface and set the parking brake firmly.
2. Start the engine and depress the brake pedal.
3. Move the shift lever through all ranges and set it at P.
**WARNING**

*Sudden Vehicle Movement:*

*Shifting the shift lever without first depressing the brake pedal is dangerous. The vehicle could move suddenly and cause an accident. Make sure the brake pedal is applied before shifting the shift lever.*

4. With the engine still idling, pull out the dipstick, wipe it clean, and put it back.

5. Pull it out again.
   The proper fluid level is marked on the dipstick as follows.

   ![Dipstick Diagram]

   **Fluid hot scale A**

   When the vehicle has been driven and the fluid is at normal operating temperature, about 65°C (150°F), the level must be between Full and Low.

   **Fluid cold scale B**

   When the engine has not been running and the outside temperature is about 20°C (70°F), the level must be between Full and Low.

**CAUTION**

- Use the cold scale only as a reference.
- If outside temperature is lower than about 20°C (70°F), start the engine and inspect the fluid level after the engine reaches operating temperature.
- If the vehicle has been driven for an extended period at high speeds or in city traffic in hot weather, inspect the level only after stopping the engine and allowing the fluid to cool for 30 minutes.

Fully insert the dipstick. When adding fluid, inspect with the dipstick to make sure it doesn't pass full.

**NOTE**

Inspect the fluid on both sides of the dipstick in a well lit area for an accurate reading.
Inspect fluid level in the washer fluid reservoir; add fluid if necessary.

The top of the float should be between FULL and LOW.

Use plain water if washer fluid is unavailable. But use only washer fluid in cold weather to prevent it from freezing.

**NOTE**
Front and rear washer fluid is supplied from the same reservoir.

State or local regulations may restrict the use of volatile organic compounds (VOCs), which are commonly used as anti-freeze agents in washer fluid. A washer fluid with limited VOC content should be used only if it provides adequate freeze resistance for all regions and climates in which the vehicle will be operated.

## Washer Fluid

### Inspecting Washer Fluid Level

**WARNING**

*Substitute Washer Fluid:*
Using radiator antifreeze as washer fluid is dangerous. If sprayed on the windshield, it will dirty the windshield, affect your visibility, and could result in an accident. Use only windshield washer fluid or plain water in the reservoir.

*Using Washer Fluid Without Anti-freeze Protection in Cold Weather:*
Operating your vehicle in temperatures below 4 degrees C (40 degrees F) using washer fluid without anti-freeze protection is dangerous as it could cause impaired windshield vision and result in an accident. In cold weather, always use washer fluid with anti-freeze protection.

**NOTE**
Front and rear washer fluid is supplied from the same reservoir.
Body Lubrication

All moving points of the body, such as door and hood hinges and locks, should be lubricated each time the engine oil is changed. Use a nonfreezing lubricant on locks during cold weather.

Make sure the hood's secondary latch keeps the hood from opening when the primary latch is released.

Air Filter

⚠️ CAUTION

Don't drive without an air filter. This could result in excessive engine wear.

This air filter may be cleaned with compressed air and reused, or replaced, depending on its condition. Unless it is very dirty, simply shake it to remove foreign particles. Each time you inspect it, wipe inside the air cleaner housing with a damp cloth.

▼ Replacing the Air Filter

NOTE

If the vehicle is operated in very dusty or sandy areas, replace the filter more often than recommended intervals.

1. Remove the bolt and unfasten the clamps on the air cleaner housing.
2. Separate the air cleaner housing and remove the filter.

3. Wipe inside the air cleaner housing with a damp cloth.

4. Clean or replace the filter.

5. Install in the reverse order of removal. Replace the filter according to Scheduled Maintenance (page 8-3).

**Wiper Blades**

⚠️ **CAUTION**

- Hot waxes applied by automatic car washers have been known to affect the wiper's ability to clean windows.
- To prevent damage to the wiper blades, don't use gasoline, kerosene, paint thinner, or other solvents on or near them.

Contamination of either the windshield or the blades with foreign matter can reduce wiper effectiveness. Common sources are insects, tree sap, and hot wax treatments used by some commercial car washes.

If the blades are not wiping properly, clean the window and blades with a good cleaner or mild detergent; then rinse thoroughly with clean water. Repeat if necessary.

**▼ Replacing Windshield Wiper Blades**

When the wipers no longer clean well, the blades are probably worn or cracked. Replace them.

⚠️ **CAUTION**

To prevent damage to the wiper arms and other components, don't try to sweep the wiper arm by hand.
1. Raise the wiper arm and turn the blade assembly to expose the plastic locking clip. Compress the clip and slide the assembly downward; then lift it off the arm.

![Plastic locking clip](image)

**CAUTION**
To prevent damage to the windshield let the wiper arm down easily, don't let it slap down on the windshield.

2. Hold the end of the rubber and pull until the tabs are free of the metal support.

![Metal support](image)  
![Tab](image)

3. Remove the metal stiffeners from the blade rubber and install them in new blades.

![Metal stiffeners](image)

**CAUTION**
- Don't bend or discard the stiffeners. You need to use them again.
- If the metal stiffeners are switched, the blade's wiping efficiency could be reduced. So don't use the driver's side metal stiffeners on the passenger's side, or vice versa.
- Be sure to reinstall the metal stiffeners in the new blade rubber so that the curve is the same as it was in the old blade rubber.
4. Carefully insert the new blade rubber. Then install the blade assembly in the reverse order of removal.

**NOTE**
Install the blade so that the tabs are toward the bottom of the wiper arm.

**CAUTION**
To prevent damage to the wiper arm and other components, don't try to sweep the wiper arm by hand.

**Replacing Rear Window Wiper Blade**
When the wiper no longer cleans well, the blade is probably worn or cracked. Replace it.

1. Raise the wiper arm and turn the blade assembly to expose the plastic locking clip. Compress the clip and slide the assembly downward; then lift it off the arm.

**CAUTION**
To prevent damage to the rear window let the wiper arm down easily, don't let it slap down on the rear window.

2. Pull down the blade rubber and slide it out of the blade holder.
3. Remove the metal stiffeners from the blade rubber and install them in new blades.

⚠️ **CAUTION**

Don't bend or discard the stiffeners. You need to use them again.

4. Carefully insert the new blade rubber. Then install the blade assembly in the reverse order of removal.
Maintenance and Care

Owner Maintenance

Battery

⚠️ WARNING

Battery-Related Lead Materials:
Battery posts, terminals and related accessories contain lead and lead compounds, chemicals known to the State of California to cause cancer and reproductive harm. Wash hands after handling.

Follow These Precautions Carefully:
To ensure safe and correct handling of the battery, read the following precautions carefully before using the battery or inspecting it.

Eye Protection:
Working without eye protection is dangerous. Battery fluid contains SULFURIC ACID which could cause blindness if splashed into your eyes. Also, hydrogen gas produced during normal battery operation, could ignite and cause the battery to explode. Always wear eye protection when working near the battery.

Spilled Battery Fluid:
Spilled battery fluid is dangerous. Battery fluid contains SULFURIC ACID which could cause serious injuries if it gets in eyes, skin or clothing. If this happens, immediately flush your eyes with water for 15 minutes or wash your skin thoroughly and get medical attention. Wear eye protection and protective gloves to prevent contact with battery fluid.

Children and Batteries:
Allowing children to play near batteries is dangerous. Battery fluid could cause serious injuries if it gets in the eyes or on the skin. Always keep batteries out of the reach of children.
**WARNING**

**Keep Flames Away:**

*Flames and sparks near open battery cells are dangerous. Hydrogen gas, produced during normal battery operation, could ignite and cause the battery to explode. An exploding battery can cause serious burns and injuries. Keep all flames including cigarettes and sparks away from open battery cells. When working near a battery, do not allow metal tools to contact the positive (⁺) or negative (⁻) terminal of the battery. Do not allow the positive (⁺) terminal to contact the vehicle body.*

**Battery-Related Explosion:**

*Flames and sparks near open battery cells are dangerous. Hydrogen gas, produced during normal battery operation, could ignite and cause the battery to explode. An exploding battery can cause serious burns and injuries. Keep all flames, including cigarettes, and sparks away from open battery cells.*

**Battery Maintenance**

- Rinse off spilled electrolyte immediately with a solution of water and baking soda.
- If the vehicle will not be used for an extended time, disconnect the battery cables.

**Inspecting Electrolyte Level**

A low level of electrolyte fluid will cause the battery to discharge quickly.

To get the best service from a battery:

- Keep it securely mounted.
- Keep the top clean and dry.
- Keep terminals and connections clean, tight, and coated with petroleum jelly or terminal grease.
Inspect the electrolyte level at least once a week. If it's low, remove the cap and add enough distilled water to bring the level between the upper and lower level (illustration).

**Don't overfill.**
Examine the specific gravity of the electrolyte with a hydrometer, especially during cold weather. If it's low, recharge the battery.

---

**Tires**

For reasons of proper performance, safety, and better fuel economy, always maintain recommended tire inflation pressures and stay within the recommended load limits and weight distribution.

---

**WARNING**

**Using Different Tire Types:**
Driving your vehicle with different types of tires is dangerous. It could cause poor handling and poor braking; leading to loss of control. Except for the limited use of the temporary spare tire, use only the same type tires (radial, bias-belted, bias-type) on all four wheels.

**Using Wrong-Sized Tires:**
Using any other tire size than what is specified for your Mazda (page 10-6) is dangerous. It could seriously affect ride, handling, ground clearance, tire clearance, and speedometer calibration. This could cause you to have an accident. Use only tires that are the correct size specified for your Mazda.
\textbf{Tire Inflation Pressure}

\textbf{WARNING}

\textit{Incorrect Tire Inflation: Overinflation or underinflation of tires is dangerous. Adverse handling or unexpected tire failure could result in a serious accident. Always inflate the tires to the correct pressure (page 10-6).}

Inspect all tire pressures monthly (including the spare) when the tires are cold. Maintain recommended pressures for the best ride, top handling, and minimum tire wear.

Refer to the specification charts (page 10-6).

\textbf{NOTE}

- Always check tire pressure when tires are cold.
- Warm tires normally exceed recommended pressures. Don't release air from warm tires to adjust the pressure.
- Underinflation can cause reduced fuel economy, uneven and accelerated tire wear, and poor sealing of the tire bead, which will deform the wheel and cause separation of tire from rim.
- Overinflation can produce a harsh ride, uneven and accelerated tire wear, and a greater possibility of damage from road hazards. Keep your tire pressure at the correct levels. If one frequently needs inflating, have it inspected.
Maintenance and Care

Owner Maintenance

▼ Tire Rotation

To equalize tread wear, rotate the tires every 12,000 km (7,500 miles)/8,000 km (5,000 miles) or sooner if irregular wear develops. During rotation, inspect them for correct balance.

* Unique driving conditions for U.S.A., Canada and Puerto Rico

Do not include (TEMPORARY USE ONLY) spare tire in rotation.

Also, inspect them for uneven wear and damage. Abnormal wear is usually caused by one or a combination of the following:

- Incorrect tire pressure
- Improper wheel alignment
- Out-of-balance wheel
- Severe braking

After rotation, inflate all tire pressures to specification (page 10-6) and inspect the lug nuts for tightness.

▼ Replacing a Tire

![Tire Wear Indicator]

**WARNING**

Worn Tires:
Driving with worn tires is dangerous. Reduced braking, steering, and traction could result in an accident. Always use tires that are in good condition.

If a tire wears evenly, a wear indicator will appear as a solid band across the tread. Replace the tire when this happens.

![New Tread](new_tread.png) ![Worn Tread](worn_tread.png)

You should replace it before the band is across the entire tread.

▼ CAUTION

Rotate unidirectional tires and radial tires that have an asymmetrical tread pattern or studs only from front to rear, not from side to side. Tire performance will be weakened if rotated from side to side.
NOTE

Tires degrade over time, even when they are not being used on the road. It is recommended that tires generally be replaced when they are 6 years or older. Heat caused by hot climates or frequent high loading conditions can accelerate the aging process. You should replace the spare tire when you replace the other road tires due to the aging of the spare tire. Regarding the manufacturing week and year is indicated with 4 digit. Refer to The tire labeling on page 9-17.

Temporary Spare Tire

Inspect the temporary spare tire at least monthly to make sure it's properly inflated and stored.

NOTE

The temporary spare tire condition gradually deteriorates even if it has not been used.

The temporary spare tire is easier to handle because of its construction. It is lighter and smaller than a conventional tire and should be used only for an emergency and only for a short distance.

Use the temporary only until the conventional tire is repaired, which should be as soon as possible.

Maintain its pressure at 420 kPa (4.2 kgf/cm² or bar, 60 psi).

CAUTION

- Don't use your temporary spare tire rim with a snow tire or a conventional tire. Neither will properly fit and could damage both tire and rim.
- The temporary spare tire has a tread life of less than 5,000 km (3,000 miles). The tread life may be shorter depending on driving conditions.
- The temporary spare tire is for limited use, however, if the tread wear solid-band indicator appears, replace the tire with the same type of temporary spare (page 8-30).

NOTE

Tires degrade over time, even when they are not being used on the road. It is recommended that tires generally be replaced when they are 6 years or older. Heat caused by hot climates or frequent high loading conditions can accelerate the aging process. You should replace the spare tire when you replace the other road tires due to the aging of the spare tire. Regarding the manufacturing week and year is indicated with 4 digit. Refer to The tire labeling on page 9-17.
Replacing a Wheel

⚠️ WARNING

Using a Wrong-Sized Wheel:
Using a wrong-sized wheel is dangerous. Braking and handling could be affected, leading to loss of control and an accident. Always use wheels of the correct size on your vehicle.

⚠️ CAUTION

A wrong-sized wheel may adversely affect:
- Tire fit
- Wheel and bearing life
- Ground clearance
- Snow-chain clearance
- Speedometer calibration
- Headlight aim
- Bumper height

When replacing a wheel, make sure the new one is the same as the original factory wheel in diameter, rim width, and offset.

Proper tire balancing provides the best riding comfort and helps reduce tread wear. Out-of-balance tires can cause vibration and uneven wear, such as cupping and flat spots.

*Some models.
**WARNING**

**Handling Halogen Bulbs:**
*When a halogen bulb breaks, it is dangerous. These bulbs contain pressurized gas. If one is broken, it will explode and serious injuries could be caused by the flying glass. If the glass portion is touched with bare hands, body oil could cause the bulb to overheat and explode when lit. Never touch the glass portion of the bulb with your bare hands and always wear eye protection when handling or working around halogen bulbs.*

**Children and Halogen Bulbs:**
*Playing with a halogen bulb is dangerous. Serious injuries could be caused by dropping a halogen bulb or breaking it some other way. Always keep halogen bulbs out of the reach of children.*

▼ **Replacing Exterior Light Bulbs**

**Replacing a headlight bulb**

1. Make sure the ignition switch is turned off and the headlight switch is off.

2. Lift the hood and find the bulb in the rear of the headlight unit.

3. Detach the electrical connector from the bulb by squeezing the tabs and pulling it to the rear.

4. Pull off the sealing cover.

5. Unhook the bulb retaining spring.

6. Swing the retaining spring out and away to free the headlight bulb.

7. Carefully remove the headlight bulb from the socket by pulling it straight back.

8. Replace the bulb.

9. Install the new bulb in the reverse order of removal.
NOTE

- If the halogen bulb is accidentally touched, it should be cleaned with rubbing alcohol before being used.
- Use the protective cover and carton for the replacement bulb to dispose of the old bulb promptly and out of the reach of children.
- When reinstalling the sealing cover, make sure \( \uparrow \) faces up.

Replacing a fog light bulb *

1. Turn the screw counterclockwise and remove it, then partially peel back the mudguard.

2. If a retaining spring is equipped, swing it outward.

3. Disconnect the socket from the electrical connector by pressing the tab on the connector with your finger.

4. Turn the bulb counterclockwise and remove it. Carefully remove the fog light bulb from its socket by pulling it straight back.

5. Install the new bulb in the reverse order of removal.

Front turn signal lights/Front side-marker lights

1. Turn the screw counterclockwise and remove it.

2. Turn the center section of the plastic retainer counterclockwise and remove it, then partially peel back the mudguard.

*Some models.
Maintenance and Care

**Owner Maintenance**

3. Turn the socket and bulb assembly counterclockwise and remove it.

4. Remove the bulb by pushing it in slightly and turning it counterclockwise.

5. Install the new bulb in the reverse order of removal.

**Side turn signal lights**

1. Slide the unit as shown in the figure to remove it.

2. Detach the electrical connector from the unit by pulling it to the rear.

3. Install the new side turn signal unit in the reverse order of removal.

**NOTE**

Bulb replacement is not possible because it is built into the unit. Replace the unit.

**Parking lights**

Due to the complexity and difficulty of the procedure, the bulbs should be replaced by an Authorized Mazda Dealer.

**Brake lights/Taillights, Rear turn signal lights, Reverse lights, Taillights/Rear-side marker lights**

1. Remove the bolts with a Phillips screwdriver and remove the rear combination component.

2. Turn the socket and bulb assembly counterclockwise and remove it.

3. Disconnect the bulb from the socket.
4. Install the new bulb in the reverse order of removal.

**High-mount brake lights**

1. Remove the liftgate upper trim.

2. Push the tab as shown in the figure, and then remove the high-mount brake light unit.

3. Turn the socket and bulb assembly counterclockwise and remove it.

4. Disconnect the bulb from the socket.

5. Install the new bulb in the reverse order of removal.

**NOTE**

An unsecured high-mount brake light will allow water to leak into the vehicle. Make sure the high-mount brake light is tightly fastened to the vehicle and if water still leaks, consult an Authorized Mazda Dealer.

**License plate lights**

1. Slide the unit as shown in the figure to remove it.

2. Turn the socket and bulb assembly counterclockwise and remove it.

3. Disconnect the bulb from the socket.

4. Install the new bulb in the reverse order of removal.

**Replacing Interior Light Bulbs**

**Overhead light/Map lights**

1. Wrap a small flathead screwdriver with a soft cloth to prevent damage to the lens and remove the lens by carefully prying on the edge of the lens with the screwdriver.

2. Disconnect the bulb by pulling it out.
Maintenence and Care

Owner Maintenance

Without moonroof, with overhead console

Overhead light, Courtesy lights, Vanity mirror lights

1. Wrap a small flathead screwdriver with a soft cloth to prevent damage to the lens and remove the lens by carefully prying on the edge of the lens with the screwdriver.

2. Disconnect the bulb by pulling it out.

Overhead light

Without either moonroof or overhead console

3. Install the new bulb in the reverse order of removal.

Courtesy lights

3-88  * Some models.
Vanity mirror lights

3. Install the new bulb in the reverse order of removal.

Luggage compartment light

1. Wrap a flathead screwdriver with a soft cloth to prevent damage to the trim and gently insert it in the luggage compartment light as shown in the figure, and then remove the luggage compartment light unit.

2. Disconnect the bulb by pulling it out.

3. Install the new bulb in the reverse order of removal.

Fuses

Your vehicle's electrical system is protected by fuses.

If any lights, accessories, or controls don't work, inspect the appropriate circuit protector. If a fuse has blown, the inside element will be melted.

If the same fuse blows again, avoid using that system and consult an Authorized Mazda Dealer as soon as possible.

Fuse Replacement

Replacing the fuses on the driver's side

If the electrical system doesn't work, first inspect fuses on the driver's side.

1. Turn off the ignition switch and other switches.

2. Open the fuse panel cover.
Maintenance and Care

**Owner Maintenance**

3. Pull the fuse straight out with the fuse puller provided on the fuse panel.

4. Inspect it and replace if it's blown.

5. Push in a new fuse of the same amperage rating, and make sure it fits tightly. If it doesn't, have an Authorized Mazda Dealer install it. If you have no spare fuses, borrow one of the same rating from a circuit not essential to vehicle operation, such as the AUDIO or CIGAR circuit.

**Replacing the fuses under the hood**

If the headlights or other electrical components don't work and the fuses in the cabin are OK, inspect the fuse block under the hood. If a fuse is blown, it must be replaced. Follow these steps:

1. Turn off the ignition switch and all other switches.
2. Remove the fuse block cover.
3. If a fuse is blown, replace it with a new one of the same amperage rating.

**WARNING**

Always replace a fuse with one of the same rating. Otherwise you may damage the electric system.

**NOTE**

To replace the MAIN fuse, contact an Authorized Mazda Dealer (page 8-41).

How to Minimize Environmental Paint Damage

The paintwork on your Mazda represents the latest technical developments in composition and methods of application.

Environmental hazards, however, can harm the paint's protective properties, if proper care is not taken.

Here are some examples of possible damage, with tips on how to prevent them.

▼ Etching Caused by Acid Rain or Industrial Fallout

**Occurrence**
Industrial pollutants and vehicle emissions drift into the air and mix with rain or dew to form acids. These acids can settle on a vehicle's finish. As the water evaporates, the acid becomes concentrated and can damage the finish.

And the longer the acid remains on the surface, the greater the chance is for damage.

**Prevention**
It is necessary to wash and wax your vehicle to preserve its finish according to the instructions in this section. These steps should be taken immediately after you suspect that acid rain has settled on your vehicle's finish.

▼ Damage Caused by Bird Dropping, Insects, or Tree Sap

**Occurrence**
Bird droppings contain acids. If these aren't removed they can eat away the clear and color base coat of the vehicle's paintwork.

When insects stick to the paint surface and decompose, corrosive compounds form. These can erode the clear and color base coat of the vehicle's paintwork if they are not removed.

Tree sap will harden and adhere permanently to the paint finish. If you scratch the sap off while it is hard, some vehicle paint could come off with it.

**Prevention**
It is necessary to have your Mazda washed and waxed to preserve its finish according to the instructions in this section. This should be done as soon as possible.

Bird droppings can be removed with a soft sponge and water. If you are traveling and these are not available, a moistened tissue may also take care of the problem.

The cleaned area should be waxed according to the instructions in this section.

Insects and tree sap are best removed with a soft sponge and water or a commercially available chemical cleaner.

Another method is to cover the affected area with dampened newspaper for one to two hours. After removing the newspaper, rinse off the loosened debris with water.
## Water Marks

### Occurrence
Rain, fog, dew, and even tap water can contain harmful minerals such as salt and lime. If moisture containing these minerals settles on the vehicle and evaporates, the minerals will concentrate and harden to form white rings. The rings can damage your vehicle's finish.

### Prevention
It is necessary to wash and wax your vehicle to preserve its finish according to the instructions in this section. These steps should be taken immediately after you find water marks on your vehicle's finish.

## Paint Chipping

### Occurrence
Paint chipping occurs when gravel thrown in the air by another vehicle's tires hits your vehicle.

### How to avoid paint chipping
Keeping a safe distance between you and the vehicle ahead reduces the chances of having your paint chipped by flying gravel.

### NOTE
- The paint chipping zone varies with the speed of the vehicle. For example, when traveling at 90 km/h (56 mph), the paint chipping zone is 50 m (164 ft).
- In low temperatures a vehicle's finish hardens. This increases the chance of paint chipping.
- Chipped paint can lead to rust forming on your Mazda. Before this happens, repair the damage by using Mazda touch-up paint according to the instructions in this section. Failure to repair the affected area could lead to serious rusting and expensive repairs.
**Maintenance and Care**

### Appearance Care

#### Exterior Care

Follow all label and container directions when using a chemical cleaner or polish. Read all warnings and cautions.

### Maintaining the Finish

#### Washing

To help protect the finish from rust and deterioration, wash your Mazda thoroughly and frequently, at least once a month, with lukewarm or cold water.

If the vehicle is washed improperly, the paint surface could be scratched. Here are some examples of how scratching could occur.

Scratches occur on the paint surface when:

- The vehicle is washed without first rinsing off dirt and other foreign matter.
- The vehicle is washed with a rough, dry, or dirty cloth.
- The vehicle is washed at a car wash that uses brushes that are dirty or too stiff.
- Cleansers or wax containing abrasives are used.

**NOTE**

- Mazda is not responsible for scratches caused by automatic car washes or improper washing.
- Scratches are more noticeable on vehicles with darker paint finishes.

To minimize scratches on the vehicle's paint finish:

- Rinse off any dirt or other foreign matter using lukewarm or cold water before washing.
- Use plenty of lukewarm or cold water and a soft cloth when washing the vehicle. Do not use a nylon cloth.
- Rub gently when washing or drying the vehicle.
- Take your vehicle only to a car wash that keeps its brushes well maintained.
- Don't use abrasive cleansers or wax that contain abrasives.

#### CAUTION

- Don't use steel wool, abrasive cleaners, or strong detergents containing highly alkaline or caustic agents on chrome-plated or anodized aluminum parts. This may damage the protective coating; also, cleaners and detergents may discolor or deteriorate the paint.
- To prevent damaging the antenna, remove it before entering a car wash facility or passing beneath a low overhead clearance.

Pay special attention to removing salt, dirt, mud, and other foreign material from the underside of the fenders, and make sure the drain holes in the lower edges of the doors and rocker panels are clean.
Insects, tar, tree sap, bird droppings, industrial fallout, and similar deposits can damage the finish if not removed immediately. When prompt washing with plain water is ineffective, use a mild soap made for use on vehicles.

Thoroughly rinse off all soap with lukewarm or cold water. Don't allow soap to dry on the finish.

After washing the vehicle, dry it with a clean chamois to prevent water spots from forming.

**WARNING**

*Driving with Wet Brakes:*
Driving with wet brakes is dangerous. Increased stopping distance or the vehicle pulling to one side when braking could result in a serious accident. Light braking will indicate whether the brakes have been affected. Dry the brakes by driving very slowly and applying the brakes lightly until brake performance is normal.

**Waxing**

Your vehicle needs to be waxed when water no longer beads on the finish. Always wash and dry the vehicle before waxing it. In addition to the vehicle body, wax the metal trim to maintain its luster.

1. Use wax which contains no abrasives. Waxes containing abrasive will remove paint and could damage bright metal parts.
2. Use a good grade of natural wax for metallic, mica, and solid colors.
3. When waxing, coat evenly with the sponge supplied or a soft cloth.
4. Wipe off the wax with a soft cloth.

**NOTE**

A spot remover to remove oil, tar, and similar materials will usually also take off the wax. Rewax these areas even if the rest of the vehicle doesn't need it.

**CAUTION**

If your Mazda is damaged and needs metal parts repaired or replaced, make sure the body shop applies anti-corrosion materials to all parts, both repaired and new. This will prevent them from rusting.

**Repairing Damage to the Finish**

Deep scratches or chips on the finish should be repaired promptly. Exposed metal quickly rusts and can lead to major repairs.

**Bright-Metal Maintenance**

- Use tar remover to remove road tar and insects. Never do this with a knife or similar tool.
- To prevent corrosion on bright-metal surfaces, apply wax or chrome preservative and rub it to a high luster.
- During cold weather or in coastal areas, cover bright-metal parts with a coating of wax or preservative heavier than usual. It would also help to coat them with noncorrosive petroleum jelly or some other protective compound.
Maintenance and Care

Appearance Care

⚠️ CAUTION
Don't use steel wool, abrasive cleaners, or strong detergents containing highly alkaline or caustic agents on chrome-plated or anodized aluminum parts. This may result in damage to the protective coating and cause discoloration or paint deterioration.

▼ Underbody Maintenance

Road chemicals and salt used for ice and snow removal and solvents used for dust control may collect on the underbody. If not removed, they will speed up rusting and deterioration of such underbody parts as fuel lines, frame, floor pan, and exhaust system, even though these parts may be coated with anti-corrosive material.

Thoroughly flush the underbody and wheel housings with lukewarm or cold water at the end of each winter. Try also to do this every month.

Pay special attention to these areas because they easily hide mud and dirt. It will do more harm than good to wet down the road grime without removing it.

The lower edges of doors, rocker panels, and frame members have drain holes that should not be clogged. Water trapped there will cause rusting.

⚠️ WARNING
Driving with Wet Brakes:
Driving with wet brakes is dangerous. Increased stopping distance or the vehicle pulling to one side when braking could result in a serious accident. Light braking will indicate whether the brakes have been affected. Dry the brakes by driving very slowly and applying the brakes lightly until brake performance is normal.

▼ Aluminum Wheel Maintenance

A protective coating is provided over the aluminum wheels. Special care is needed to protect this coating.

**NOTE**
- Don't use a wire brush or any abrasive cleaner, polishing compound, or solvent on aluminum wheels. They may damage the coating.
- Only use a mild soap or neutral detergent and always use a sponge or soft cloth to clean the wheels. Rinse thoroughly with lukewarm or cold water. Also, be sure to clean the wheels after driving on dusty or salted roads. This helps prevent corrosion.
- Avoid washing your vehicle in an automatic car wash that uses high-speed or hard brushes.
- If your aluminum wheels lose luster, wax the wheels.
**Interior Care**

**Dashboard Precautions**

Prevent caustic solutions such as perfume and cosmetic oils from contacting the dashboard. They'll damage and discolor it. If these solutions get on the dashboard, wipe them off immediately.

⚠️ **CAUTION**

Do not use glazing agents. Glazing agents contain ingredients which may cause discoloration, wrinkling, cracks and peeling.

**Cleaning the Upholstery and Interior Trim**

**Vinyl**

Remove dust and loose dirt from vinyl with a whisk broom or vacuum cleaner. Clean vinyl with a leather-and-vinyl cleaner.

**Leather**

Real leather isn’t uniform and may have scars, scratches, and wrinkles. Clean it with a leather cleaner or mild soap.

Wipe it with a damp soft cloth; then dry and buff it with a dry soft cloth.

**Fabric**

Remove dust and loose dirt from fabric with a whisk broom or vacuum cleaner. Clean it with a mild soap solution good for upholstery and carpets. Remove fresh spots immediately with a fabric spot cleaner.

To keep the fabric looking clean and fresh, take care of it. Otherwise its color will be affected, it can be stained easily, and its fire-resistance may be reduced.

⚠️ **CAUTION**

Use only recommended cleaners and procedures. Others may affect appearance and fire-resistance.

**Cleaning the Lap/Shoulder Belt Webbing**

Clean the webbing with a mild soap solution recommended for upholstery or carpets. Follow instructions. Don't bleach or dye the webbing; this may weaken it.

After cleaning the belts, thoroughly dry the belt webbing and make sure there is no remaining moisture before retracting them.

⚠️ **WARNING**

**Damaged Seat Belt:** Using damaged seat belts is dangerous. In a collision, damaged belts cannot provide adequate protection. Have an Authorized Mazda Dealer replace damaged belts immediately.
Cleaning the Window Interiors

If the windows become covered with an oily, greasy, or waxy film, clean them with glass cleaner. Follow the directions on the container.

⚠️ CAUTION

Don't scrape or scratch the inside of the rear window. You may damage the rear window defroster grid.

Customer Assistance

Customer Assistance (U.S.A.)

Your complete and permanent satisfaction is our business. We are here to serve you. All Authorized Mazda Dealers have the knowledge and the tools to keep your Mazda vehicle in top condition.

If you have any questions or recommendations for improvement regarding the service of your Mazda vehicle or servicing by Mazda Dealer personnel, we recommend that you take the following steps:

<table>
<thead>
<tr>
<th>NOTE</th>
</tr>
</thead>
<tbody>
<tr>
<td>If it becomes necessary to have the components or wiring system for the supplementary restraint system modified to accommodate a person with certain medical conditions in accordance with a certified physician, contact an Authorized Mazda Dealer.</td>
</tr>
</tbody>
</table>

STEP 1: Contact Your Mazda Dealer

Discuss the matter with an Authorized Mazda Dealer. This is the quickest and best way to address the issue. If your concern has not been resolved by the CUSTOMER RELATIONS, SALES, SERVICE, or PARTS MANAGER, then please contact the GENERAL MANAGER of the dealership or the OWNER.

STEP 2: Contact Mazda North American Operations

If for any reason you feel the need for further assistance after contacting your dealership management, you can reach Mazda North American Operations by one of the following ways.

Log on: at www.mazdaUSA.com

Answers to many questions, including how to locate or contact a local Mazda dealership in the U.S., can be found here.

E-mail: click on “Contact Us” at the bottom of the page at www.mazdaUSA.com

By phone at: 1 (800) 222-5500

By letter at:
Attn: Customer Assistance
Mazda North American Operations
7755 Irvine Center Drive
Irvine, CA 92618-2922
P.O. Box 19734
Irvine, CA 92623-9734

9-2
In order to serve you efficiently and effectively, please help us by providing the following information:

1. Your name, address, and telephone number
2. Year and model of vehicle
3. Vehicle Identification Number (17 digits, noted on your registration or title or located on the upper driver's side corner of the dash)
4. Purchase date and current mileage
5. Your dealer's name and location
6. Your question(s)

If you live outside the U.S.A., please contact your nearest Mazda Distributor.
Customer Assistance (Canada)

\textbf{Satisfaction Review Process}

Your complete and permanent satisfaction is of primary concern to Mazda. All Authorized Mazda Dealers have both the knowledge and tools to keep your Mazda in top condition. In our experience, any questions, problems, or complaints regarding the operation of your Mazda or any other general service transactions are most effectively resolved by your dealer. If the cause of your dissatisfaction cannot adequately be addressed by normal dealership procedures, we recommend that you take the following steps:

\textbf{STEP 1: Contact the Mazda Dealer}

Discuss the matter with a member of dealership management. If the Service Manager has already reviewed your concerns, contact the owner of the dealership or its General Manager.

\textbf{STEP 2: Contact the Mazda Regional Office}

If you feel that you still require assistance, ask the dealer Service Manager to arrange for you to meet the local Mazda Service Representative. If more expedient, contact Mazda Canada Inc. Regional Office nearest you for such arrangements. Regional Office address and phone numbers are shown (page 9-6).

\textbf{STEP 3: Contact the Mazda Customer Relations Department}

If still not substantially satisfied, contact the Customer Relations Department, Mazda Canada Inc., 55 Vogell Road, Richmond Hill, Ontario, L4B 3K5 Canada TEL: 1 (800) 263-4680.

Provide the Department with the following information:

1. Your name, address and telephone number
2. Year and model of vehicle
3. Vehicle Identification Number (VIN). Refer to the “Vehicle Identification Labels” page of section 10 of this manual for the location of the VIN.
4. Purchase date
5. Present odometer reading
6. Your dealer's name and location
7. The nature of your problem and/or cause of dissatisfaction

The Department, in cooperation with the local Mazda Service Representative, will review the case to determine if everything possible has been done to ensure your satisfaction.
Please recognize that the resolution of service problems in most cases requires the use of your Mazda dealer's service facilities, personnel and equipment. We urge you to follow the above three steps in sequence for most effective results.

\textbf{\textit{\textsection Mediation/Arbitration Program}}

Occasionally a customer concern cannot be resolved through Mazda's Customer Satisfaction Program. If after exhausting the procedures in this manual your concern is still not resolved, you have another option.

Mazda Canada Inc. participates in an arbitration program administered by the Canadian Motor Vehicle Arbitration Plan (CAMVAP). CAMVAP will advise you about how your concern may be reviewed and resolved by an independent third party through binding arbitration.

Your complete satisfaction is the goal of Mazda Canada Inc. and our dealers. Mazda's participation in CAMVAP makes a valuable contribution to our achieving that goal. There is no charge for using CAMVAP. CAMVAP results are fast, fair and final as the award is binding on both you and Mazda Canada Inc.

\textbf{\textit{\textsection Canadian Motor Vehicle Arbitration Plan (CAMVAP)}}

If a specific item of concern arises, where a solution cannot be reached between an owner, Mazda, and/or one of it's dealers (that all parties cannot agree upon), the owner may wish to use the services offered by the Canadian Motor Vehicle Arbitration Plan (CAMVAP).

CAMVAP uses the services of Provincial Administrators to assist consumers in scheduling and preparing for their arbitration hearings. However, before you can proceed with CAMVAP you must follow your Mazda dispute resolution process as outlined previously.
Customer Assistance

CAMVAP is fully implemented in all provinces and territories. Consumers wishing to obtain further information about the Program should contact the Provincial Administrator at 1 (800) 207-0685, or by contacting the Canadian Motor Vehicle Arbitration Plan Office at:

Canadian Motor Vehicle Arbitration Plan
235 Yorkland Boulevard, suite 300
North York, Ontario
M2J 4Y8

Customer Assistance (Puerto Rico)

Your complete and permanent satisfaction is our business. That is why all Authorized Mazda Dealers have the knowledge and the tools to keep your Mazda vehicle in top condition.

If you have any questions or recommendations for improvement regarding the service of your Mazda vehicle or servicing by Mazda Dealer personnel, we recommend that you take the following steps:

▼ STEP 1

Discuss the matter with an Authorized Mazda Dealer. This is the quickest and best way to address the issue. If your concern has not been resolved by the CUSTOMER RELATIONS, SALES, SERVICE, or PARTS MANAGER, then please contact the GENERAL MANAGER of the dealership or the OWNER.

▼ STEP 2

If, after following STEP 1, you feel the need for further assistance, please contact your area's Mazda representative (Indicated on the next page).

Please help us by providing the following information:

1. Your name, address, and telephone number
2. Year and model of vehicle
3. Vehicle Identification Number (17 digits, noted on your registration or title or located on the upper driver's side corner of the dash)
4. Purchase date and current mileage
5. Your dealer's name and location
6. Your question(s)

Warranties for Your Mazda

- New Vehicle Limited Warranty
- Distributor Major Component Limited Warranty (Canada only)
- Safety Restraint System Limited Warranty
- Anti-perforation Limited Warranty
- Federal Emission Control Warranty (U.S.A. only)
  - Emission Defect Warranty
  - Emission Performance Warranty
- California Emission Control Warranty (U.S.A. only)
- Emission Control Warranty (Canada only)
- Replacement Parts and Accessories Limited Warranty
- Tire Warranty

**NOTE**

Detailed warranty information is provided with your Mazda.
Customer Information and Reporting Safety Defects

Warranty

Outside the United States

Government regulations in the United States require that automobiles meet specific emission regulations and safety standards. Therefore, vehicles built for use in the United States may differ from those sold in other countries.

The differences may make it difficult or even impossible for your vehicle to receive satisfactory servicing in other countries. We strongly recommend that you NOT take your Mazda outside the United States. However, in the event that you are moving to Canada permanently, Mazda vehicles built for use in the United States could be eligible for exportation to Canada with specific vehicle modifications to comply with the Canadian Motor Vehicle Safety requirements (CMVSS).

NOTE

The above is applicable for a permanent import/export situation and not related to travelers on vacation.

You may have the following problems if you do take your vehicle outside of the United States:

- Recommended fuel may be unavailable. Any kind of leaded fuel or low-octane fuel will affect vehicle performance and damage the emission controls and engine.
- Proper repair facilities, tools, testing equipment, and replacement parts may not be available.

Please refer to your Manufacturer's Warranty Booklet for more information.
Outside Canada

Government regulations in Canada require that automobiles meet specific emission regulations and safety regulations. Therefore, vehicles built for use in Canada may differ from those sold in other countries.

The differences may make it difficult or even impossible for your vehicle to receive satisfactory servicing in other countries. We strongly recommend that you NOT take your Mazda outside Canada. However, in the event that you are moving to the United States permanently, Mazda vehicles built for use in Canada could be eligible for exportation to the United States with specific vehicle modifications to comply with the United States Federal Motor Vehicle Safety Standards (FMVSS).

NOTE

The above is applicable for a permanent import/export situation and not related to travelers on vacation.

You may have the following problems if you do take your vehicle outside of Canada:

- Recommended fuel may be unavailable. Any kind of leaded fuel or low-octane fuel will affect vehicle performance and damage the emission controls and engine.
- Proper repair facilities, tools, testing equipment, and replacement parts may not be available.

Please refer to your Manufacturer's Warranty Booklet for more information.
Registering Your Vehicle in A Foreign Country (Except United States and Canada)

Government regulations in your country could require that automobiles meet specific emission and safety standards. Vehicles built for your country may differ from those built for other countries. In addition to registration problems, satisfactory service may be difficult or even impossible in another country.

The fuel specified for your vehicle may be unavailable.

Parts, servicing techniques, and tools necessary to maintain and repair your vehicle may be unavailable.

There might not be an Authorized Mazda Dealer in the country you plan to take your vehicle.

The Mazda warranty is valid only in certain countries.
Add-On Non-Genuine Parts and Accessories

Non-genuine parts and accessories for Mazda vehicles can be found in stores. These may fit your vehicle, but they are not approved by Mazda for use with Mazda vehicles. When you install non-genuine parts or accessories, they could affect your vehicle's performance or safety systems; the Mazda warranty doesn't cover this. Before you install any non-genuine parts or accessories, consult an Authorized Mazda Dealer.

\\begin{center}\\textbf{WARNING}\\end{center}

\textit{Installation of Non-Genuine Parts or Accessories:}
Installation of non-genuine parts or accessories is dangerous. Improperly designed parts or accessories could seriously affect your vehicle's performance or safety systems. This could cause you to have an accident or increase your chances of injuries in an accident. Always consult an Authorized Mazda Dealer before you install non-genuine parts or accessories.

\textit{Add-On Electrical and Electronic Equipment:}
Incorrectly choosing or installing improper add-on equipment or choosing an improper installer is dangerous. Essential systems could be damaged, causing engine stalling, air-bag (SRS) activation, ABS inactivation, or a fire in the vehicle. Be very careful in choosing and installing add-on electrical equipment, such as mobile telephones, two-way radios, stereo systems, and car alarm systems.

Mazda assumes no responsibility for death, injury, or expenses that may result from the installation of add-on non-genuine parts or accessories.
Cell Phones Warning

⚠️ WARNING ⚠️

**Use of Cell Phones and Other Devices by Driver:**
Use of any electrical devices such as cell phones, computers, portable radios, vehicle navigation or other devices by the driver while the vehicle is moving is dangerous. Dialing a number on a cell phone while driving also ties-up the driver's hands. Use of these devices will cause the driver to be distracted and could lead to a serious accident. If a passenger is unable to use the device, pull off the right-of-way to a safe area before use. If use of a cell phone is necessary despite this warning, use a hands-free system to at least leave the hands free to drive the vehicle. Never use a cell phone or other electrical devices while the vehicle is moving and, instead, concentrate on the full-time job of driving.

Please comply with the legal regulations concerning the use of communication equipment in vehicles in your country.
This information relates to the tire grading system developed by the U.S. National Highway Traffic Safety Administration for grading tires by tread wear, traction, and temperature performance.

\textbf{Tread Wear}

The tread wear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one-and-a-half times as well on the government course as a tire graded 100.

The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm because of variations in driving habits, service practices and differences in road characteristics and climate.

\textbf{Traction-AA, A, B, C}

The traction grades, from highest to lowest, are AA, A, B, and C. These grades represent the tire's ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

\textbf{WARNING}

\textit{The traction grade assigned to this tire is based on braking (straight ahead) traction tests and does not include acceleration cornering (turning), hydroplaning, or peak traction characteristics.}

\textbf{Temperature-A, B, C}

The temperature grades A (the highest), B, and C, represent the tire's resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperatures can lead to sudden tire failure.

Grade C corresponds to a level of performance which all passenger vehicle tires must meet under the Federal Motor Vehicle Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.
WARNING

The temperature grade for this tire is established for a tire that is properly inflated and not overloaded. Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause heat buildup and possible tire failure.

These grades will be added to the sidewalls of passenger vehicle tires over the next several years according to a schedule established by the NHTSA and the tire manufacturers.

The grade of tires available as standard or optional equipment on Mazda vehicles may vary with respect to grade.

ALL PASSENGER VEHICLE TIRES MUST CONFORM TO THESE GRADES AND TO ALL OTHER FEDERAL TIRE-SAFETY REQUIREMENTS.

Uniform Tire Quality Grading

Quality grades can be found where applicable on the tire sidewall between tread shoulder and maximum section width.

For example:

Treadwear 200 Traction AA Temperature A

UTQGS MARK (example)

TREADWEAR 200 TRACTION AA TEMPERATURE A
Tire Labeling

Federal law requires tire manufacturers to place standardized information on the sidewall of all tires. This information identifies and describes the fundamental characteristics of the tire and also provides a tire identification number for safety standard certification and in case of a recall.

▼Information on Passenger Vehicle Tires

Please refer to the diagram below.

1. TIN: U.S. DOT tire identification number
2. Passenger car tire
3. Nominal width of tire in millimeters
4. Ratio of height to width (aspect ratio)
5. Radial
6. Rim diameter code
7. Load index & speed symbol
8. Severe snow conditions
9. Tire ply composition and materials used
10. Max. load rating
11. Tread wear, traction and temperature grades
12. Max. permissible inflation pressure
13. SAFETY WARNING

P215/65R15 95H is an example of a tire size and load index rating. Here is an explanation of the various components of that tire size and load index rating. Note that the tire size and load index rating may be different from the example.

**P**
Indicates a tire that may be installed on cars, SUVs, minivans and light trucks as designated by the Tire and Rim Association (T&RA).

<table>
<thead>
<tr>
<th>NOTE</th>
</tr>
</thead>
<tbody>
<tr>
<td>If your tire size does not begin with a letter this may mean it is designated by either ETRTO (European Tire and Rim Technical Organization) or JATMA (Japan Tire Manufacturing Association).</td>
</tr>
</tbody>
</table>

215
“215” is the nominal width of the tire in millimeters. This three-digit number gives the width in millimeters of the tire from sidewall edge to sidewall edge. In general, the larger the number, the wider the tire.

65
“65” is the aspect ratio. This two-digit number indicates the tire's ratio of height to width.

**R**
“R” is the tire construction symbol. R indicates “Radial ply construction”.

15
“15” is the wheel rim diameter in inches.

95
“95” is the Load Index. This two-or three-digit number indicates how much weight each tire can support.
“H” is the speed rating. The speed rating denotes the maximum speed for which the use of the tire is rated.

<table>
<thead>
<tr>
<th>Letter Rating</th>
<th>Speed Rating</th>
</tr>
</thead>
<tbody>
<tr>
<td>Q</td>
<td>99 mph</td>
</tr>
<tr>
<td>R</td>
<td>106 mph</td>
</tr>
<tr>
<td>S</td>
<td>112 mph</td>
</tr>
<tr>
<td>T</td>
<td>118 mph</td>
</tr>
<tr>
<td>U</td>
<td>124 mph</td>
</tr>
<tr>
<td>H</td>
<td>130 mph</td>
</tr>
<tr>
<td>V</td>
<td>149 mph</td>
</tr>
<tr>
<td>W</td>
<td>168 mph</td>
</tr>
<tr>
<td>Y</td>
<td>186 mph</td>
</tr>
</tbody>
</table>

* For tires with a maximum speed capability over 149 mph, tire manufacturers sometimes use the letters ZR. For tires with a maximum speed capability over 186 mph, tire manufacturers always use the letters ZR.

**M+S or M/S: Mud and Snow**

AT: All Terrain.
AS: All Season. The “M+S” or “M/S” indicates that the tire has some functional use in mud and snow.

**U.S. DOT Tire Identification Number (TIN)**

This begins with the letters “DOT” which indicates the tire meets all federal standards. The next two numbers or letters are the plant code where it was manufactured, and the last four numbers represent the week and year the tire was manufactured. For example, the numbers 457 means the 45th week of 1997. After 2000 the numbers go to four digits. For example, the number 2102 means the 21th week of 2002. The other numbers are marketing codes used at the manufacturer's discretion. This information is used to contact consumers if a tire defect requires a recall.

**Tire Ply Composition and Materials Used**

The number of plies indicates the number of layers of rubber-coated fabric in the tire. In general, the greater the number of plies, the more weight a tire can support. Tire manufacturers also must indicate the tire materials, which include steel, nylon, polyester, and other.

**Maximum Load Rating**

This number indicates the maximum load in kilograms and pounds that can be carried by the tire.

**Maximum Permissible Inflation Pressure**

This number is the greatest amount of air pressure that should ever be put in the tire under normal driving conditions.
Tread Wear, Traction and Temperature Grades

Tread wear: The tread wear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one and one-half (1 1/2) times as well on the government course as a tire graded 100.

Traction: The traction grades, from highest to lowest are AA, A, B, and C. The grades represent the tire's ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

Temperature: The temperature grades are A (the highest), B and C, representing the tire's resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel.

Snow Tires

In some heavy snow areas, local governments may require true snow tires, those with very deeply cut tread. These tires should only be used in pairs or placed on all four wheels. Make sure you purchase snow tires that are the same size and construction type as the other tires on your vehicle.

SAFETY WARNING

The following safety warning appears on the tire's sidewall.

SERIOUS INJURY MAY RESULT FROM:

- EXPLOSION OF TIRE/RIM ASSEMBLY DUE TO IMPROPER MOUNTING- MATCH TIRE DIAMETER TO RIM DIAMETER; NEVER EXCEED 40 psi (275 kPa) TO SEAT BEADS-ONLY SPECIALLY TRAINED PERSONS SHOULD MOUNT TIRES.

- TIRE FAILURE DUE TO UNDER-INFLATION/OVERLOADING/DAMAGE- FOLLOW OWNER'S MANUAL AND PLACARD IN VEHICLE-FREQUENTLY CHECK INFLATION PRESSURE AND INSPECT FOR DAMAGE.

9-20
Information on Temporary Tires

Please refer to the diagram below.

1. Temporary tires
2. Nominal width of tire in millimeters
3. Ratio of height to width (aspect ratio)
4. Diagonal
5. Rim diameter code

T115/70D 16 is an example of a tire size and load index rating. Here is an explanation of the various components of that tire size and load index rating. Note that the tire size and load index rating may be different from the example.

T
Indicates a tire that may be installed on cars, SUVs, minivans and light trucks as designated by the Tire and Rim Association (T&RA).

115
“115” is the nominal width of the tire in millimeters. This three-digit number gives the width in millimeters of the tire from sidewall edge to sidewall edge. In general, the larger the number, the wider the tire.

70
“70” is the aspect ratio. This two-digit number indicates the tire's ratio of height to width.
Customer Information and Reporting Safety Defects

Tire Information (U.S.A.)

D

“D” is the tire construction symbol. D indicates “diagonal ply construction”.

16

“16” is the wheel rim diameter in inches.
Location of the Tire Label (Placard)

You will find the tire label containing tire inflation pressure by tire size and other important information on the driver's side B-pillar or on the edge of the driver's door.

</tbody>
</table>

\*\*Recommended Tire Inflation Pressure\*\*

On the tire label you will find the recommended tire inflation pressure in both kPa and psi for the tires installed as original equipment on the vehicle. It is very important that the inflation pressure of the tires on your vehicle is maintained at the recommended pressure. You should check the tire pressure regularly to insure that the proper inflation pressure is maintained.

Refer to Tires on page 10-6.

NOTE

Tire pressures listed on the vehicle placard or tire information label indicate the recommended cold tire inflation pressure, measured when the tires are cold, after the vehicle has been parked for at least 3 hours. As you drive, the temperature in the tire warms up, increasing the tire pressure.
WARNING

Tire Under-Inflation:
Driving your vehicle with under-inflated tires is dangerous. Under-inflation is the most common cause of failures in any kind of tire and may result in severe cracking, tread separation or “blowout”, with unexpected loss of vehicle control and increased risk of injury. Under-inflation increases sidewall flexing and rolling resistance, resulting in heat buildup and internal damage to the tire. It results in unnecessary tire stress, irregular wear, loss of control and accidents. A tire can lose up to half of its air pressure and not appear to be flat! It is impossible to determine whether or not tires are properly inflated just by looking at them. Always check the tire inflation pressures on a regular basis according to the recommended tire inflation pressure on the tire label and in conjunction with the information in this owner's manual.

Checking Tire Pressure

1. When you check the air pressure, make sure the tires are cold —meaning they are not hot from driving even a mile.
2. Remove the cap from the valve on one tire.
3. Firmly press a tire gauge onto the valve.
4. Add air to achieve recommended air pressure.
5. If you overfill the tire, release air by pushing on the metal stem in the center of the valve. Then recheck the pressure with your tire gauge.
6. Replace the valve cap.
7. Repeat with each tire, including the spare.

NOTE

Some spare tires require higher inflation pressure.

8. Visually inspect the tires to make sure there are no nails or other objects embedded that could poke a hole in the tire and cause an air leak.
9. Check the sidewalls to make sure there are no gouges, cuts, bulges, cracks or other irregularities.
NOTE

Warm tires normally exceed recommended pressures. Don't release air from warm tires to adjust the pressure. Under-inflation can cause serious failures and accidents. Over-inflation can produce a harsh ride and the greater possibility of damage from road hazards.

▼ Glossary of Terms

**Tire Placard:** A label indicating the OE tire sizes, recommended inflation pressure, and the maximum weight the vehicle can carry.

**Tire Identification Number (TIN):** A number on the sidewall of each tire providing information about the tire brand and manufacturing plant, tire size, and date of manufacture.

**Inflation Pressure:** A measure of the amount of air in a tire.

**kPa:** Kilopascal, the metric unit for air pressure.

**psi:** Pounds per square inch, the English unit for air pressure.

**B-pillar:** The structural member at the side of the vehicle behind the front door.

**Original Equipment (OE):** Describes components originally equipped on the vehicle.

**Vehicle Load Limit:** The maximum value of the combined weight of occupants and cargo.

**Bead Area of the Tire:** Area of the tire next to the rim.

**Sidewall Area of the Tire:** Area between the bead area and the tread.

**Tread Area of the Tire:** Area on the perimeter of the tire that contacts the road when it's mounted on the vehicle.

**Seating capacity** means the total allowable number of vehicle occupants. Seating capacity is described on the tire label.

**Production options weight** is the combined weight of installed regular production options weighing over 2.3 kilograms in excess of the standard items which they replace, and not previously considered in the curb weight or accessory weight, including heavy duty brakes, ride levelers, roof rack, heavy duty battery, and special trim.

**Rim** is the metal support (wheel) for a tire or a tire and tube assembly upon which the tire beads are seated.
Improper or inadequate vehicle maintenance can cause tires to wear abnormally. Here are some important maintenance points:

**Tire Inflation Pressure**

Inspect all tire pressure monthly (including the spare) when the tires are cold. Maintain recommended pressures for the best ride, top handling, and minimum tire wear. Use the pressures specified on the vehicle tire information placard or tire label for optimum service.

**Tire Rotation**

To equalize tread wear, rotate the tires every 12,000 km (7,500 miles) or sooner if irregular wear develops. During rotation, inspect them for correct balance.

Inspect the tires for uneven wear and damage. Abnormal wear is usually caused by one or a combination of the following:

- Incorrect tire pressure
- Improper wheel alignment
- Out-of-balance wheel
- Severe braking

After rotation, inflate all tire pressures to specification (page 10-6) and inspect the lug nuts for tightness.
**CAUTION**

Rotate unidirectional tires and radial tires that have an asymmetrical tread pattern or studs only from front to rear, not from side to side. Tire performance will be weakened if rotated from side to side.

*(With limited-slip differential)*

Don't use the following:

- Tires not of the designated size
- Tires of different sizes or types at the same time
- Tires not sufficiently inflated

If these instructions aren't followed, the rotation of the left and right wheels will be different and will thus apply a constant load on the limited-slip differential. This will cause a malfunction.

**Replacing a Tire**

**WARNING**

*Worn Tires:*

*Driving with worn tires is dangerous. Reduced braking, steering, and traction could result in an accident. Always use tires that are in good condition.*

If a tire wears evenly, a wear indicator will appear as a solid band across the tread. Replace the tire when this happens.

![Tread wear indicator]

New tread  Worn tread

You should replace it before the band is across the entire tread.
NOTE

Tires degrade over time, even when they are not being used on the road. It is recommended that tires generally be replaced when they are 6 years or older. Heat caused by hot climates or frequent high loading conditions can accelerate the aging process. You should replace the spare tire when you replace the other road tires due to the aging of the spare tire. Regarding the manufacturing week and year is indicated with 4 digit. Refer to The tire labeling on page 9-17.

Safety Practices

The way you drive has a great deal to do with your tire mileage and safety. So cultivate good driving habits for your own benefit.

- Observe posted speed limits
- Avoid fast starts, stops and turns
- Avoid potholes and objects on the road
- Do no run over curbs or hit the tire against the curb when parking

CAUTION

If you feel a sudden vibration or ride disturbance while driving or you suspect your tire or vehicle has been damaged, immediately reduce your speed. Drive with caution until you can safely pull off the road. Stop and inspect the tire for damage. If the tire is under-inflated or damaged, deflate it, remove the tire and rim and replace it with your spare tire. If you cannot detect a cause, have the vehicle towed to the nearest vehicle or tire dealer to have the vehicle inspected.
Vehicle Loading

This section will guide you in the proper loading of your vehicle and/or trailer, to keep your loaded vehicle weight within its design rating capability, with or without a trailer. Properly loading your vehicle will provide maximum return of vehicle design performance. Before loading your vehicle, familiarize yourself with the following terms for determining your vehicle's weight ratings, with or without a trailer, from the vehicle's Safety Certification Label and Tire and Load Information Label:

⚠️ WARNING

Overloaded Vehicle:
Overloading a vehicle is dangerous. The results of overloading can have serious consequences in terms of passenger safety. Too much weight on a vehicle's suspension system can cause spring or shock absorber failure, brake failure, handling or steering problems, irregular tire wear, tire failure or other damage.

Overloading makes a vehicle harder to drive and control. It also increases the distance required for stopping. In cases of serious overloading, brakes can fail completely, particularly on steep grades. The load a tire will carry safely is a combination of the size of the tire, its load range, and corresponding inflation pressure.

Never overload the vehicle and always observe the vehicle's weight ratings from the vehicle's Safety Certification and Tire and Load Information labels.

Base Curb Weight is the weight of the vehicle including a full tank of fuel and all standard equipment. It does not include passengers, cargo, or optional equipment.
Vehicle Curb Weight is the weight of your new vehicle when you picked it up from your dealer plus any aftermarket equipment.

PAYLOAD

Payload is the combined weight of cargo and passengers that the vehicle is designed to carry. The maximum payload for your vehicle can be found on the Tire and Load Information label on the driver's door or door pillar. Look for “THE COMBINED WEIGHT OF OCCUPANTS AND CARGO SHOULD NEVER EXCEED XXX kg or XXX lbs” for your maximum payload. The payload listed on the tire label is the maximum payload for the vehicle as built by the assembly plant. If any aftermarket or dealer installed equipment has been installed on the vehicle, the weight of the equipment must be subtracted from the payload listed on the tire label in order to be accurate.
SAMPLE

TIRE AND LOADING INFORMATION

The combined weight of occupants and cargo should never exceed 539 kg or 1188 lbs.

Cargo Weight includes all weight added to the Base Curb Weight, including cargo and optional equipment. When towing, trailer tongue load or king pin weight is also part of cargo weight.

The cargo weight limit decreases depending on the number of vehicle occupants. The cargo weight limit can be calculated by subtracting the total weight of the vehicle occupants from the “combined weight of occupants and cargo should never exceed” value on the tire label.
Examples: Based on a single occupant weight of 68 kg, and a value of 385 kg for the "combined weight of occupants and cargo should never exceed":
The cargo weight limit with one occupant is \(385 \text{ kg} - 68 \text{ kg} = 317 \text{ kg}\)
The cargo weight limit with two occupants is \(385 \text{ kg} - (68 \times 2) \text{ kg} = 249 \text{ kg}\)
If the weight of the occupant increases, the cargo weight limit decreases by that much.

**GAW (Gross Axle Weight)** is the total weight placed on each axle (front and rear) - including vehicle curb weight and all payload.

**GAWR (Gross Axle Weight Rating)** is the maximum allowable weight that can be carried by a single axle (front or rear). These numbers are shown on the Safety Compliance Certification Label located on the driver's door or door pillar. The total load on each axle must never exceed its GAWR.

**GVW (Gross Vehicle Weight)** is the Vehicle Curb Weight + cargo + passengers.

**GVWR (Gross Vehicle Weight Rating)** is the maximum allowable weight of the fully loaded vehicle (including all options, equipment, passengers and cargo). The GVWR is shown on the Safety Compliance Certification Label located on the driver's door or door pillar. The GVW must never exceed the GVWR.
WARNING

**Exceeding Axle Weight Rating Limits:**

Exceeding the Safety Certification Label axle weight rating limits is dangerous and could result in death or serious injury as a result of substandard vehicle handling, performance, engine, transmission and/or structural damage, serious damage to the vehicle, or loss of control.

Always keep the vehicle within the axle weight rating limits.
GCW (Gross Combined Weight) is the weight of the loaded vehicle (GVW) plus the weight of the fully loaded trailer.

GCWR (Gross Combined Weight Rating) is the maximum allowable weight of the vehicle and the loaded trailer - including all cargo and passengers - that the vehicle can handle without risking damage. (Important: The towing vehicle's braking system is rated for operation at GVWR, not at GCWR. Separate functional brakes should be used for safe control of towed vehicles and for trailers weighing more than 1,500 lbs). The GCW must never exceed the GCWR.

Maximum Loaded Trailer Weight is the highest possible weight of a fully loaded trailer the vehicle can tow. It assumes a vehicle with only mandatory options, no cargo (internal or external), a tongue load of 10–15% (conventional trailer) or king pin weight of 15–25% (fifth-wheel trailer), and driver only (150 lbs). Consult your dealership (or the RV and Trailer Towing Guide provided by your dealership) for more detailed information.

Tongue Load or Fifth-Wheel King Pin Weight refers to the amount of the weight that a trailer pushes down on a trailer hitch.

Examples: For a 5000 lb conventional trailer, multiply 5000 by 0.10 and 0.15 to obtain a proper tongue load range of 500 to 750 lbs. For an 11,500 lb fifth-wheel trailer, multiply by 0.15 and 0.25 to obtain a proper king pin load range of 1,725 to 2,875 lbs.
**WARNING**

*Exceeding GVWR or GAWR Specifications:*

Exceeding the GVWR or the GAWR specified on the certification label is dangerous. Exceeding any vehicle rating limitation could result in a serious accident, injury, or damage to the vehicle.

Do not use replacement tires with lower load carrying capacities than the originals because they may lower the vehicle's GVWR and GAWR limitations. Replacement tires with a higher limit than the originals do not increase the GVWR and GAWR limitations.

*Never exceed the GVWR or the GAWR specified on the certification label.*
Steps for Determining the Correct Load Limit:

Steps for Determining Correct Load Limit:

(1) Locate the statement “The combined weight of occupants and cargo should never exceed XXX kg or XXX lbs” on your vehicle's placard.

(2) Determine the combined weight of the driver and passengers that will be riding in your vehicle.

(3) Subtract the combined weight of the driver and passengers from XXX kg or XXX lbs.

(4) The resulting figure equals the available amount of cargo and luggage load capacity. For example, if the “XXX” amount equals 1400 lbs. and there will be five 150 lb passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs. (1400 – 750 (5 × 150) = 650 lbs.)

(5) Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in Step 4.

(6) If your vehicle will be towing a trailer, the load from your trailer will be transferred to your vehicle. Consult this manual to determine how this reduces the available cargo and luggage load capacity of your vehicle.
Reporting Safety Defects (U.S.A.)

If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying Mazda Motor Corporation (Your Mazda Importer/Distributor).

If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or Mazda Motor Corporation (Your Mazda Importer/Distributor).

To contact NHTSA, you may either call the Auto Safety Hotline toll-free at 1 (800) 424-9393 (or 366-0123 in Washington, D.C. area) or write to: NHTSA, U.S. Department of Transportation. Washington, D.C. 20590. You can also obtain other information about motor vehicle safety from the Hotline.

NOTE

If you live in the U.S.A., all correspondence to Mazda Motor Corporation should be forwarded to:

Mazda North American Operations
7755 Irvine Center Drive
Irvine, California 92618-2922
P.O. Box 19734
Irvine, CA 92623-9734
Customer Assistance Center or toll free at 1 (800) 222-5500

If you live outside of the U.S.A., please contact the nearest Mazda Distributor shown (page 9-8) in this booklet.
Customer Information and Reporting Safety Defects

**Reporting Safety Defects**

---

**Reporting Safety Defects (Canada)**

Canadian customers who wish to report a safety-related defect to Transport Canada, Defect Investigations and Recalls, may telephone the toll free hotline 1-800-333-0510, or contact Transport Canada by mail at: Transport Canada, ASFAD, Place de Ville Tower C, 330 Sparks Street, Ottawa ON K1A 0N5.

For additional road safety information, please visit the Road Safety website at: http://www.tc.gc.ca/roadsafety/menu.htm
Service Publications

Factory-authorized Mazda service publications are available for owners who wish to do some of their own maintenance and repair.

When requesting any of our publications through an Authorized Mazda Dealer, refer to the chart below.

If they don't have what you need in stock, they can order it for you.

▼ Tires

**NOTE**

The tires have been optimally matched with the chassis of your vehicle. When replacing tires, Mazda recommends that you replace tires of the same type originally fitted to your vehicle. For details, contact an Authorized Mazda Dealer.

Check the tire pressure label for tire size and inflation pressure. Refer to Tire Inflation Pressure on page 8-29.
